In Kincardineshire, Mr. Taylor of Kirtonhill kept a stock of short-horns. He latterly declined farming, but part of the stock still remains with the present farmer, who took his farm. But Captain Barclay Alardice of Ury has excelled all other breeders of short-horns to the north of the Frith of Forth. He purchased many bulls from Mr. John Rennie and others, and can now show as high bred and good skinned stock, and of as strong a constitution, as any breeder. His success may convince any one that short-horns will thrive admirably in Scotland, and will pay better than any other stock. Captain Barclay has a stock of thirty cows, the produce of which he sells annually as breeding stock, which realize good prices; and he ships fine heavy steers by steam to London. He has proved himself one of the most spirited breeders and farmers in Scotland.

The late show of the Highland Society in Aberdeen in 1834, where sixteen short-horn bulls were shown, proves the wide dissemination of the breed, even in that northern latitude. They have also found their way to the county of Caithness, whither the late Mr. Thomson of Laws and Mr. John Wilson of Simprim, in Berwickshire, have sent bulls to Mr. Horne of Stirkoke.

This hasty enumeration, for I could not run the risk of tiring the patience of my readers by entering into the particulars of every breeder's stock, shows how the short-horns are spreading themselves over the face of the country. Such an im-

portant result could only have occurred from a conviction of the superior properties of this breed; for, perhaps, no breed of cattle has had to encounter in so great a degree unmerited obloquy, and dogged prejudice, as it has had north of the Forth. Let any man who is well acquainted with the profitable properties of short-horns recommend them to a north country farmer, and he will be instantly met with this plausible but disparaging remark, "They may be very well adapted to your fine climate in the south country, but they could not thrive here on our poor meat, like our own black cattle." To attempt to prove the fallacy of this assertion, for it is nothing else, by an appeal to facts established by the experience of south country breeders, would be of no avail, for dogmatic assertion overrules every argument. But now that the experiment of breeding them has been tried before their very faces, in their own country, and alongside their own favourite breeds; and that it has been proved beyond contradiction that they will get fatter on the same keep, and will endure quite well the ordinary climate of the plains in Scotland, dogmatists dare not now be so bold. Strange that so much proof is requisite to convince men to enhance their own interest, by adopting that breed which, under similar circumstances, would leave them the larger profit. No doubt, short-horns require adequate food and requisite attention; but what superior thing can be obtained without corresponding trouble? I can say, however, that I have seen short-horns bred and fed on all sorts of land, and sometimes in high districts, and indifferent climate, and have known them do well in all situations. Nay, some of the farmers in high districts in the south of Scotland, where they are now kept, not unfrequently beat their neighbours in competition, who are in lower situations and finer climate. In any situation, two-year olds will fetch from 15*l* to 20*l* a-piece, and three-year olds from 20*l* to 25*l*. Can such prices be obtained in the northern counties for any other breed of cattle? And if not, why require farther inducement to cultivate the more profitable breed of the short-horns? Nor are such prices obtained through extravagant feeding. Only the ordinary produce of the farm, such as grass, turnips, straw, and potatoes are given; and unless hay is very cheap and abundant, it is never applied to the feeding of cattle. But as 20*l* a-piece for two-year olds is a large return, one-half of which time the cattle may be said to be calves, the short-horns would pay even for extraordinary feeding. The truth is, cattle ought to be kept at a feeding pace throughout the whole time the breeder has them in his possession. It is both loss of time and labour, and a great risk of life, to keep cattle hanging on in a mere growing condition. The sooner they are brought to maturity the sooner is the return of cattle effected, the larger the profit realized, and the less risk of life incurred. In the ordinary circumstances of life, a person would feel obliged by being made acquainted with advantageous means of obtaining profit; but in the breeding and feeding of cattle some stronger inducements, it seems, must be superadded!

The rage for breeding short-horns has been much encouraged by the institution of agricultural societies for the distribution of high premiums to successful competitors. Two such societies were formed many years ago on the Borders, one, The Tweedside Agricultural Society, which held its meetings twice a-year at Coldstream; the other, The Border Agricultural Association, which met as

frequently at Kelso. Every nobleman, gentleman and farmer in the districts around contributed to the support of these societies. At length an amicable union of interests was made by them under the title of the Border Union Agricultural Association, which meets alternately at Coldstream and Kelso. 100*l.* are annually given for the best five bulls, and an exhibition of forty bulls for competition is no uncommon sight at these shows. Some years ago the breeders south of the Tweed used to carry off most of the prizes; but now the breeders north of that celebrated river, draw off their fair share of prizes, showing the progressive improvement in this branch of agricultural industry. Breeders in Scotland have now greater reason than ever to drink "Both sides of the Tweed." Similar societies exist in the counties of East Lothian, Fife, Perth, Angus, Kincardine, and Aberdeen, by whom the encouragement of short-horn stock is laudably and perseveringly kept in view. But all these local societies are mere auxiliaries in their exertions to the Highland and Agricultural Society of Scotland, a society which now enrolls, as members, 2,000 of the most influential noblemen and gentlemen, and the most experienced farmers, in the country, and which possesses the means of distributing upwards of 2,200*l.* a-year in premiums for the promotion of agriculture. The Highland Society, mindful of local improvements, bestows a portion of its premiums, in conjunction with local societies, for the improvement of the best breeds of cattle and sheep throughout the country. In magnitude and influence no such society ever existed before in any country. It is a society worthy of the high character which Scottish agriculture has acquired throughout the world.

The preservation of the valuable breed of short-horns is a consideration of paramount importance; and, fortunately, it is in the power of breeders themselves to secure it. It consists entirely in maintaining the *purity of blood in vigour*. This desirable end is best secured by avoiding, on the one hand, the evil of breeding in-and-in, that is, the union of too close relationship in blood, and, on the other, too violent a cross. A strong mark of the purity of blood being in vigour is the circumstance of like producing its like; and no breed will in this respect incur so little disappointment to the breeder as short-horns, after a proper selection of the dam and sire.

The evil of breeding in-and-in, or, in other words, producing too great refinement of tone, is manifested in the first instance by a tenderness of constitution; the animals not being able to withstand the extremes of heat and cold, rain and drought. If the evil is prolonged through several generations, the forms of the animals become affected, the bone becomes very small, the neck droops, the skin of the head becomes tight and scantily covered with hair, the expression of the eye indicates extreme sensibility, the hair on the body becomes thin and short, and the skin as thin as paper; the *points* continue good, and predisposition to fatness increases, but the whole carcass becomes much diminished in size, though retaining its plumpness and beautiful symmetry. The evil, however, does not terminate in the production of these symptoms. Internal diseases ensue, such as disorganization of the liver, or rot, polypi in the trachea, or clyers, malformation of the bones of the neck and legs, and general deformity.

A remarkable instance of the evils of breeding in-and-in may have been observed in Mr. Robert-

son's stock during his latter days, when he relinquished the active duties of a breeder. A decline in the constitution might have been observed in the white bull Romulus, bred by Mr. Robertson, and shown by Mr. John Rennie at the Highland Society Show in Edinburgh in 1827. He exhibited evident symptoms of delicacy, and was in very poor condition, owing most probably to having caught cold some time before the show. The judges, nevertheless, awarded him the first prize, because he was decidedly the bull which showed the purest blood on the ground. In this award they displayed right judgment, and proved they were judges in the best acceptance of the term. The bull certainly did not at the time show to the best advantage. Few would have supposed he was from Mr. Robertson's celebrated stock, or had been brought up on the fine pastures of Ladykirk. Still as he was, he showed superior *points* of high breeding to any bull that was exhibited against him. He was the finest toucher I ever put my hands on. Afterwards, when recovered from the cold, he showed himself a very superior animal in appearance. When full of beef, it was difficult to find a bull with so many fine *points*. Many people censured the decision of the judges, solely on account of the low condition of the animal, and of his small size; and this opinion was well touched off in a very humorous manner by the shepherd, in the *Noctes in Blackwood's Magazine* for April 1828. After all, it was evident his constitution had become tender by two near breeding, for although afterwards he regained condition, he died of consumption in the hands of Mr. Ritchie, the gentleman formerly alluded to, who bought him. Viewing the decision of the judges in this light, it is questionable whether they should not rather have selected a bull for the premium of hardier constitution, of which there were several in the show.

It is true that both Mr. Bakewell and the Messrs. Collings bred much in-and-in. Such a practice may be excusable in those who are attempting to establish a particular kind of stock, as by that means it will be sooner brought to maturity. But the same license cannot with propriety be taken by breeders who have abundance of well-bred stock within their reach from which to select their breeding stock. The invariably injurious tendency of breeding in-and-in proves that Nature herself places a barrier against abuse in breeding.

The practice of breeding in-and-in leads me to remark on the subject of judging of large and small bulls. I have had frequent opportunities of observing that premiums, at local shows, are given by the judges to *large* bulls. This I conceive a great mistake. In my opinion, the size of a bull ought to be considered of secondary importance in judging of him as a breeding animal. That which shows the greatest number of good *points* ought to be chosen, and these should be counted by the judges. One bull may possess one point better than another; but that one possessing the greatest number of points ought to be preferred, particularly among a competition of aged bulls. Some young bulls, it is true, do not show their points till they are one, or even two years old, whilst others show them from the first. When all the points are not visible on a young bull, he must be partly judged of by his pedigree. If the blood is well descended, free from intermixture, and not too nearly related in blood on both sides, then a young bull may be safely judged of by his pedigree. The points of well-bred young bulls improve as

they advance in years. I recollect of a remark which was made by an eminent breeder of short-horns, the late Mr. Abraham Wilson of Edington Mains, in Berwickshire, in regard to this very subject. He once had a yearling bull, which showed rather indifferently as to points, and was dissuaded to breed from him. He remarked, that knowing his blood, he should breed from him, though he were crooked as an Z. He did so, and obtained some most excellent stock from him, and the bull improved very much in his points as he advanced in years.

Purity of blood, then, being the criterion by which to judge of bulls, the size is a matter of little importance. Fine quality is of greater value than size. Short legs are generally indicative of fine quality; and it seldom happens that large size is united with fine quality. Where the two properties are found to be united, I should certainly prefer the large size; but without knowing the pedigree, a mistake is more likely to be committed by using a large than a small bull. The stock of the most celebrated breeders consisted of bulls of small size. Mr. Robertson's bulls were small, and so were those of the Messrs. Collings. In particular, Mr. Charles Colling's bull Diamond, which obtained the first prize at the show at Coldstream, and was purchased by Mr. Abraham Wilson and three others, for 150 guineas, was a small animal; but he possessed the most beautiful symmetry and points of any bull I ever saw. He was, in fact, a perfect model of a short-horn bull. His stock was very like himself. A great many of them are still in Berwickshire, and are very much admired. They get soon ripe, and never fail to fetch the highest price per stone in the market, the beef being of the finest quality. I have known two-year olds got by this bull fetch 25*l* to slaughter. I was the more assured of the propriety of attending to quality more than to size, by what I witnessed at Smithfield. On getting acquainted with one of the principal salesmen, who was a very frank man, I was desirous to obtain as much information from him as possible regarding the state of the market. He stated to me at the first this startling proposition, that "twenty stones of beef were not worth 20*s* that day." This appeared to me a strange remark, a perfect conundrum, and I begged an explanation. That day's market, he explained, was short of fine quality, but was well supplied with inferior beef. For an ox of 80 stones, 8*l*b to the stone, of fine quality, he could obtain 20*l*, whereas for one of 100 stones, of inferior quality, he could procure no more; so that twenty stones of beef were that day given away for nothing. These remarks reminded me of the propriety of the breeding toast, in reference to Smithfield, "Small in size and great in value." The bull Comet was rather a short-legged animal, but he had beautiful symmetry, exquisite points, and great substance. He was a bull of the finest quality.

The selection of bulls for breeding should not be made at random. Purity of blood is of course the first consideration. Every breeder should be able to trace the pedigree of his stock, and should keep a book for the express purpose of entering his stock as they are bred, in the manner that breeders of race-horses do. With such a reference young bulls, which do not show all their points, might be bought and sold in perfect and mutual confidence. Quality of flesh is the next consideration. This property is generally, though not invariably, associated with a small size, and particularly with a shortness of the legs. Quality and

blood, however, being the same, I would always prefer a large bull. Where these properties are not very apparent, or only one, not both present, the small size will incur the lesser risk of breeding from impure blood. A good touch is a very desirable point for early maturity. Some bulls show many good points, but want the fine touch. This was the case with the bull bred by Mr. John Rennie, and shown by Mr. Somerville at the Highland Society's shows in Edinburgh, at the same time with Romulus. His defects were in not having fine touch, and having thin hair. A thick soft covering of hair is an excellent property in a bull. It enables the stock to withstand the vicissitudes of the season in any situation. At one time thin silky skins were the vogue, but breeders afterwards found that a good covering of hair protects the animals from many dangers of climate and disease. At the same show I exhibited the red bull Pizarro, bred by Mr. Hunt of Thorington, in Northumberland, of the best coat of hair I ever saw on a short-horn, and having a rather thick, but mellow hide. The coat was like dreadnought, and the hair being set on thick, like down, it was impossible for cold or rain to penetrate it. This bull had been previously hired for two years by Mr. James Wilson of Simprim, in Berwickshire. Mr. Wilson had another bull at the same time, with quite a different kind of coat. The calves of both were kept together, and though both were equally well bred, those got by the red bull with the thick coat stood out in the straw yard in stormy weather, and eat the turnips quite heartily; whereas the calves of the other could not. This bull obtained a premium at Kelso, and another at Haddington, beating Mr. Somerville's bull, then in possession of Mr. Bogue of Linplum. I sold the bull Pizarro to Mr. Beattie of Oakwood, Selkirkshire, who used him for seven years, and who has obtained much hardy good stock from him. A heifer, his full sister, also gained a sweepstakes at Kelso. A lot of young heifers, which Captain Barclay disposed of, by auction, at Edinburgh, in autumn 1834, possessed fine thick coats, judiciously suitable to the climate of Scotland. Breeders of short-horns in Scotland should keep this point particularly in view in selecting their breeding stock, whether male or female.

All the considerations enumerated are particularly suitable to breeders who keep their stock to fatten, and especially for early maturity. To breed for the grazier is to pursue a somewhat different object. Graziers generally prefer cattle which stand high on the legs. They conceive they look better in a crowded or large market. Although, as a grazier, I would always prefer to purchase short-legged compact animals for feeding, still that is not the general rule with graziers. Butchers, on the other hand, look only to quality, especially in Smithfield, regardless of the length or shortness of the legs; but fine quality is more frequently associated with short than with long legs.

In judging of cows I should make some modifications of the rules recommended for bulls. They should be always large, having capacious parts to support the calf to a large size, and to admit its egress freely at the period of calving. Purity of blood, of course, must be attended to as the first consideration; but, in order to obtain a well-bred large cow to breed from, I would overlook a point or two in the symmetry or quality. As in the case with bulls, small cows will generally show fine symmetry, yet I would deviate a little on the score

of points, which are every thing to a bull, to obtain a large capacious cow, which generally carries a strong healthy calf.

It has been frequently asserted, that short-horn cows are bad milkers, indeed that no kind of cattle are so deficient in milk. Those who say so do not know the still greater deficiencies of the Herefords, a species of cattle quite unknown in Scotland. The higher bred stocks of the Messrs. Collings, Mr. Mason, and Mr. Robertson, yielded little milk. Indeed, Mr. Robertson's cows could not supply milk sufficient for their own calves, at least not in the quantity which it was desired by him they should receive. Cows were kept for the purpose of supplying the deficiency of milk of the high-bred cows. But this deficiency of milk did not altogether proceed from the circumstance of the cows being of the short-horn breed : because those eminent breeders devoted their whole attention to the development of flesh, and not at all to the development of milk. Had the flesh been neglected as much as the milk, and the property of giving milk as much cherished as the development of flesh, their short-horn cows would have been deep milkers. As it is, the generality of short-horn cows are not bad milkers. Indeed, it is not to be doubted, that where the general secreting powers of the animal system have been increased, as it has been in that of the short-horns, the power of secreting milk will be increased with the power of secreting flesh and fat ; all that seems requisite, is to encourage the power of that secretion, which for the time is most wanted. I have no doubt that it is completely in the power of the breeders of short-horns to make them good milkers. It would be to desire an impossibility, to desire the full development of flesh, fat, and milk, at the same time ; but there is no absurdity in desiring a large secretion of flesh and fat at one time, and a large secretion of milk at another, from the same cow. Accordingly, this is the very character which has been acquired by short-horn cows. They will yield from six to sixteen quarts a-day throughout the season ; and they are so constant milkers, that they seldom remain dry above six weeks or two months before the time of calving. I know a Scotch breeder who had a short-horn cow which gave fifteen quarts a-day during the flush of the grass in summer, and never went dry for two seasons. An attempt was made to dry her about six weeks before the period of calving, but it was thought that the udder would be injured to force it to get dry, when there was evidently no effort on the part of nature to effect it. In this manner she continued to give milk for two years, till she calved the second year, at which time the udder was attacked with inflammation, and she died. Many instances of very constant milking, in short-horn cows have come under my notice, but the practice of the owners of public dairies in towns, were there no other proofs, would prove the milking powers of short-horn cows. They prefer them as the greatest and most steady milkers ; and it is now difficult to see cows of any breeds but short-horns, or crosses with them, in these dairies. In London, Edinburgh, and Liverpool, fine short-horn cows may be seen at the public dairies. They are bought by the milkmen whenever they come of age, that is, about five or six years old. They give milk till they attain the age of eight or nine, and are then fed off fat for the butcher. These cows can be fed off fat. This property, and that of milking, prove clearly, that short-horns possess

both in a remarkable degree. They do not, it is true, possess both in an eminent degree at the same time ; but they exhibit either property separately when it is desired. They thus give a return in flesh for part of their original high price, whilst they remunerate their owners in the mean time with an abundance of milk for their food.

Short-horn calves are seldom fed for the butcher ; but when they are, they exhibit in a remarkable degree the disposition to early maturity. Their docile temper inspires confidence in man, and secures them exemption from ill treatment. They take their food with avidity at any time it is offered them, while they lie at ease and in contentment till the period of feeding again arrives. In this manner they gain condition without trouble to themselves or their owners, till in about eight weeks they will acquire the weight of 40lb per qr. The celerity of acquiring flesh and fat in short-horns, is strikingly exemplified in the calf. Suppose a calf weighs 12lb per qr when calved, in eight weeks it will acquire 112lb, or one stone of 14lb per week ; and when it attains to 80 stones in two years, it acquires on the average three quarters of a stone per week. But short-horns will lay on a stone per week even in the second year.

Thus at all ages short-horn cattle will realize a handsome profit, for the great care and good food liberally bestowed on them.

#### THE METHOD FOLLOWED IN INDIA OF CASTRATING TURNIPS AND CARROTS, TO MAKE THEM YIELD A GOOD SEED.

Dig the ground and work it well, and form it into any number of beds that may be required, in the same manner that seed-beds are usually prepared with manure, and they may then be considered ready for the reception of the castrated plants.

TO MAKE THE COMPOSITION.—Take equal proportions of buffalo and hog's dung, as fresh as can be procured, and of red earth, mix these all together, with a sufficient quantity of water to make the whole the consistence of honey ; to a quantity of this mixture, equal to about five quarts, add three drams by weight of asacitida, (called hingue in the bazaar,) previously dissolved in a small quantity of water, by rubbing them together. When all these substances are properly combined, the composition is then ready for use.

The turnips and carrots selected for the operation of castration, should be fresh and succulent, and of the largest kind that can easily be obtained, but must be more than a quarter or one-third grown ; the tops should be removed, leaving about 8 or 9 inches from the turnip or carrot upwards, and a little of the bottom or top root must be cut straight off likewise, allowing nearly the whole of the eating part to remain, from the bottom of which nearly to the top or junction of the stalk, must be made two incisions across each other, entirely through the body of the plant, and dividing it into four quarters ; they must now be dipped and moved about in the composition, which is ready prepared in a chatty, and all except the stalks are to be covered by it ; the composition must likewise be made to penetrate and fill the incisions, and the plants are then to be placed in the beds at the distance of 15 inches from each other ; the whole of the part covered by the composition is to be below the surface of the ground, and they are then to be watered—the watering must be repeated every three days until they shall have taken root

and fresh tops make their appearance, when once every four days will be sufficient; and they require to be weeded the same as any other esculent; the fresh tops soon become large, strong, and luxuriant, and the seed they produce will be of a good and vigorous kind.

### CHOICE OF SEED.

(FROM SINCLAIR.)

Cultivators often commit very serious blunders in the choice of seed; yet by attention to this object, they might frequently add considerably to the quantity of the produce, and to the intrinsic value of the crop.

By some, the hazardous rule, of taking the worst grain for seed, has been recommended; but it is a much safer system, unless in cases of real necessity, to use none but what is fully ripened, for such seed is less affected by injurious local circumstances, or unfavourable seasons. The ripest seed may be obtained by beating, or slightly thrashing the sheaves. The shape of the seed merits attention, for though size or magnitude is generally owing to the soil in which it has been grown, yet it is likewise a sign of its ripeness. In regard to figure, much depends upon the climate, for warm and early situations produce round grain; whereas a long figure denotes the reverse. Colour is a popular mark in some cases, but is not itself of importance. It is prudent, however, to raise that sort which is most suitable to the market in regard to colour, and in other respects. Sometimes seed, apparently quite sound, is incapable of producing plants. This should be ascertained, by sowing a certain number, and seeing how they spring.

On the whole, though blighted grain will often vegetate, and though it is possible, that in rich soils and in very favourable seasons, it may produce even an abundant harvest, yet the prudent farmer, will not rely upon the chance of such an event, as a practice on which he ought to depend, more especially when his crops are sown in winter, or early in spring, and consequently are exposed to much severity of the weather.

Care also must be taken that the seed has not suffered injury by being bruised, or having imperfect lobes, or broken husks, and that there is no risk of sterility from age.

Where domestic seed is relied on, it is proper to change the seed from the heavier, to the lighter parts of the farm, and *vice versa*, if there be much difference. On clay farms in general, domestic seed may be safely used for some time; but with a view to prevent degeneracy, it is an excellent practice to select from the growing crops, the ears which are the soonest ripe, and which are of the plumpest quality; by this means, those husbandmen who devote themselves in a peculiar manner to this object, can not only supply themselves, but can always command a much higher price than others, by selling the grain raised upon their farms for seed either among their neighbours, or in other districts.

### CHANGE OF SEED.

A change of seed, being founded on rational principles, is in general to be recommended. Every species of grain has a climate in which it flourishes, and a soil in which it never degenerates; for instance in Sicily, where wheat is said to grow naturally, the seed that drops from the mother-plant, arrives at per-

fection, though neither the seed nor the soil be changed. But as wheat is not a native production of Britain, it has here a great tendency to degenerate, more especially in the northern districts; and it degenerates rapidly, if the seed be sown, year after year, in the neighbourhood where it was produced. Nor is it sufficient that the seed be procured from a different field; it ought also to be taken from a different soil, and a different atmosphere.

Besides preventing a degeneracy in the quality of the grain, a judicious change of seed, has a tendency to effect an earlier maturity in the crop; an object, in many cases, of the greatest moment. It is well known that a change of constitution in plants, originating from the situation in which they have been placed, is commonly transmitted to their offspring. Plants propagated from seed produced in a warm sandy soil, will therefore grow quickly, in whatever soil the seed is sown; and plants from seed produced in a cold stiff soil, are late of growing, even in a warm soil. Hence the advantage of changing seed from a warm to a cold soil; for though seed from a warm soil, will not grow so fast in a cold, as in a warm soil, it will, however, always grow more quickly than seed from a cold soil.\* The quantity also will be increased. From an experiment made by the celebrated Lord Kames, it would appear, that the produce of changed seed, exceeds that of old seed, at the rate of nearly twenty-six per cent. The farmer however, ought not to alter his seed, while it gives him fair and reasonable satisfaction, unless he has every reason to be convinced, that better can be obtained by a change.

It is proper to add, that in two cases it has been found expedient to change the seed from an inferior to a superior climate. In Flanders, where great quantities of flax are grown, the seed must be brought from the Baltic, otherwise the crop will be deficient. In case of potatoes also, seed is imported from an inferior climate, as the most likely means of preventing the disease called the *curl*. It has fortunately, however, been discovered, that by taking up potatoes for seed early, or sowing them so late that they cannot reach maturity, the same object may be obtained.

Besides changing seed, crossing different varieties has been found of use. Mr. Knight has not only raised new varieties of apples, and of the garden pea, but has likewise tried experiments with crossing wheat, which he has effected by sowing the different kinds together. This was attended with a most extraordinary result; for when, in the year 1796, almost the whole crops of corn in the island were blighted, the varieties obtained by crossing, alone escaped, though sown in different soils, and in very different situations.

### QUANTITY OF SEED.

It is hardly to be credited, how little this branch of the inquiry is attended to, or understood, in several districts. In some the quantity of seed sown is enor-

\* Gentleman Farmer, p. 330—To ascertain these points, an intelligent farmer in the Lothians, sowed English seed wheats from London, with some of his own, and it was always earlier by several days. He has likewise tried sowing seed wheat equal in quality to his own, from a situation where the climate produces crops ten days later than the farm he occupies, and it was nearly a week later than his own seed sown at the same time.—Husbandry of Scotland, vol. i. p. 355.

mous, as a quarter of oats or eight bushels per acre. In others, they sow the same quantity of wheat in all seasons of the year, without paying much regard to the time of sowing; though two or three bushels of seed sown in August or September, are equal to four bushels and upwards, sown in the latter end of November, or in spring. Thick sowing must occasion a great deficiency in early sown wheats, in weak and shallow soils; for though they may be in heart sufficient to push a number of plants through the winter and spring, yet the vigour of the soil is spent in the earlier stages of vegetation; the straw is slender and scanty, and the ears abridged of half their load.

### ACUTE RHEUMATISM.

BY MR. THOMPSON, LEITH.

(From the *Veterinarian*.)

I have had fourteen cases of this disease in Mr. Bannerman's stables. The muscles of the shoulders and arms were generally the parts affected: the cure was a good bleeding from the jugular, and a sharp purge, and was effected in a few days.

One of these cases was uncommonly severe. The disease was in the back and loins. The horse brought forward his hind legs under his flanks, roached his back, and drew up his flanks with a convulsive twitch, accompanied by a piteous groan, almost every five minutes.

The sympathetic fever was alarming; the pulse was 90; and there was obstinate constipation of the bowels.

The horse literally roared aloud if any one attempted to shift him in the stall, and groaned incessantly when lying.

He was bled almost to fainting; three moderate doses of aloes were given in the course of two days, accompanied by small portions of hellebore. Injections were administered, and warm fomentations were frequently applied to the back and loins.

On the third day the physic operated briskly, accompanied by considerable nausea and reduction of the pulse. From that time the animal gradually recovered, contrary to the expectation of the proprietor, who had previously lost, by apparently the same complaint, two horses, each of them worth £40.

These horses are well fed, and always in good condition, but are at times worked without mercy, which, perhaps, makes them so liable to such attacks.

**EAGLE'S NEST.**—Whilst a herd was tending his sheep on the Pentland hills a few days ago, he found in the cavity of a rock a nest of that rare bird the golden eagle. The nest was composed of a few sticks rudely thrown together, without the least appearance of regularity. At the time it was discovered the eagles were absent, but they very soon made their appearance, screaming dreadfully. Upon looking into the nest there were found in it two eaglets and an addled egg. The provisions for the eaglets which were in the nest were two young rabbits, part of a third, a partridge, and, strange to say, a part of a salmon. On the rock round about the nest there were a great quantity of bones, feathers, &c.—*Caledonian Mercury*.

**FALCONRY AMONG THE ANCIENTS.**—An early writer on this subject gives us the following anecdote:—"I once had (says he) an excellent oppor-

tunity of seeing this sport near Nazareth, in Galilee. An Arab, mounting a swift courser, held the falcon on his hand, as huntsmen commonly do. When we espied the animal on the top of a mountain, he let loose the falcon, which flew in a direct line, like an arrow, and attacked the antelope, fixing the talons of one of his feet into its cheeks, and those of the other into its throat, extending his wings obliquely over the animal; spreading one towards one of his ears, and the other to the opposite hip. The creature, thus attacked, made a leap twice the height of a man, and freed himself from the falcon; but, being wounded, and losing both its strength and speed, it was again attacked by the bird, which fixed the talons of both his feet into its throat, and held it fast, till the huntsman coming up, took it alive, and cut its throat. The falcon was allowed to drink the blood, as a reward for his labour; and a young falcon, which was learning, was likewise put to the throat. By this means the young birds are taught to fix their talons in the throat of the animal, as the properest part; for, should the falcon fix upon the creature's hip, or some other part of the body, the huntsman would not only lose his game, but his falcon too; for the beast, roused by the wound, which could not prove mortal, would run to the deserts and the tops of the mountains, whither its enemy, keeping its hold, would be obliged to follow, and being separated from its master must of course perish."

### AGE OF A PIG, AS CALCULATED BY HIS TEETH.

The calculation of the age of the pig, as evidenced by the teeth, has not yet been pushed beyond three years; it has stopped at the protrusion of the adult middle teeth of the lower jaw.

At three or four months, the young pig is provided with all his incisive milk teeth, as well as the tushes; and the successive replacement of these teeth is the only sure guide to the knowledge of his age.

**FROM SIX TO TEN MONTHS.**—The shedding and replacement of the corner teeth—the change of the upper corner teeth preceding that of the lower ones by two or three months; the milk tushes give place to the permanent ones.

**FROM TWENTY MONTHS TO TWO YEARS.**—The change of the pincers in both jaws, and the formation of a black circle at the base of the tushes.

**FROM TWO AND A HALF TO THREE YEARS.**—The protrusion of the adult middle teeth in both jaws; the pincers are black, shagrin'd, and a little rounded at the extremity. After three years, the age is appreciated by the growth of the tushes, which continue to increase in length and thickness as long as the animal lives. Between three and four years, the upper tushes begin to raise the lip, and at five years' old they protrude through the lips. At six years of age the tushes of the lower jaw shew themselves out of the mouth, and begin to turn in a somewhat spiral form. At this period, also, the eyebrows become wrinkled, and the lateral eminences of the forehead, caused by the roots of the tushes of the upper jaw, become more projecting. After seven years, the eyebrows become grey, and the bone of the superior arch of the orbit is so much more prominent, that the eyes appear to be hollow and sunk in the head. These alterations of the face, which are continually increasing, concur, with the length of the tushes and the largeness of the snout, to give to the head of the animal a hideous aspect.

## OBSERVATIONS ON THE NATIVE BREED OF IRISH CATTLE.

*(From the Irish Farmer's Magazine.)*

It would be most extraordinary if in a country like Ireland, which contains so great an extent of rich and grassy land, its native cattle were not in many respects valuable, and this is no doubt the case in those parts of the country, where attention has been paid to the breeding and rearing of those animals, and where the soil and climate are suited to their growth and thriftiness. That some of their properties, however, may be improved by a judicious cross with a more valuable breed, there is no doubt; but still any further attempt at improvement must be slow, unless a better system be adopted in Ireland in the rearing of calves, and their treatment afterwards, than is usually practised. In the Queen's County, about 20 years since, the Leicestershire cattle were introduced by Sir H. Parnell, and further improvements were made by the late Mr. Stubbers and Mr. Doyne, but in consequence of the calves bred from these stocks being poorly reared, and only wintered with oat or barley straw, the breed annually degenerated, and the form alone is the only feature now which distinguishes their progeny from the native IRISH breed:—their size and original properties of quick feeding and richness of milk having much degenerated. In the corn districts of Ireland, especially, this is to be particularly noticed, and is in a great measure attributable to the deficiency of grass land on tillage farms, which obliges the farmer, through mismanagement, to stint his cows in pasturage, and to economize the produce of milk by taking a portion of it for the use of his own family, which more properly should be given to the animals to be reared. In lieu of this an unnatural mess of boiled linseed and hay water is substituted: the result of which is, that the calves thus treated either die before they are reared, or are carried off by disease before the following winter; and even should they live, are not worth half so much when selling out, as could be obtained for well reared calves. It is therefore evident there is no economy in the system; and it can only be from ignorance or necessity it is adopted.

In making these observations we do not consider them applicable to our regular cattle breeders, but to a very large proportion of small farmers in Ireland who attempt to economize in this way. We shall, however, suggest a better system, which will prove really economical without risking the health or valuable qualities of the animals to be reared—it is this—to grow a regular succession of artificial green food, by which a sufficient number of cows can be well supported even on farms entirely under tillage, and by which an abundance of milk will be obtained, not only for feeding calves well, but for the support of the farmer and his family. Lucerne, scarlet trefoil, and vetches, may be advantageously sown for this purpose, which can succeed each other in the rotation we have named them, and will form also a beneficial and improving preparation for the land on which corn is to follow. By such nutritious keep each cow will be enabled to rear a calf and also supply a portion of milk for domestic purposes, and at the same time—if a good breed—she will run into flesh and make early beef the following spring. Let this system be fairly contrasted with the usual mode practised, and no rational person will hesitate to give the preference to the former, either on a limited or extensive scale.

In some large dairies, also, there is a mistaken economy practised in this respect; the proprietors

supposing they may advantageously substitute the food already mentioned in rearing calves for milk.—The low price of young stock in this country may, no doubt, be some apology for this practice; but the query is, all matters considered, is there ultimately any advantage gained—for those who purchase cattle badly reared will be sure to avoid, if possible, getting such stock again; and consequently the character of the breeder will be much injured? In England they are aware of this manner of rearing calves with us, and are therefore very cautious of buying Irish cattle as they have experienced to their cost that many lots they have bought have fed so slowly, and proved so badly when slaughtered, that little profit was made on them either by the grazier or butcher. Unfortunately for the the character of our native cattle it is this description that are usually imported into Britain, for good beasts are generally sold early in the season to our graziers, and then the cattle jobbers purchase on low terms, for the former purpose, those of inferior quality. No doubt prime fat beasts are exported to British sea-port towns, but those are seldom sent to the interior of that country; therefore it is presumed by those not acquainted with such circumstances, that good and valuable cattle are not to be procured in Ireland.

There is also another matter which tends to lower the character of Irish cattle in the estimation of English buyers; it is this—the number of old and ill-fed cows that are sent from this country, which are bought at a low price at the late fairs, in consequence of the season being too far advanced to feed them the same year; and even should they put up meat the following year their value is trifling, as English butchers will not buy *old beef* except at a very reduced price. It appears, however, that Irish dairy-men, and others, consider it good management to keep *good* milking cows for *many years*; quite forgetting that the value of the best is annually decreasing, independent of the loss of keep for the months that she remains dry. We think the English system better—that is, keeping the dairy cows well, and selling them out for stores the following spring, when but a small loss by the difference of price in the original purchase will be sustained. Good cows in calf generally bring from £13 to £15, and are usually sold out after giving milk for eight or nine months from £10 to £12. If, however, such cattle were to be continued for this purpose for five or six years, their value at the time of selling off would not be more than £7 or £9. The question then is—what is to pay for this deficiency in value, and the expense in supporting them the months they annually remain unprofitable? It may be said that a good milch cow will amply repay this loss in the course of a few years by extra produce, the ultimate loss sustained by selling her out when old—and this, we admit, will be the case *occasionally*; but on general principles we are decidedly in favour of selling them off dry before they are six years old, and still younger, should they prove bad milkers.

---

TENURE OF CASTLE GUARD.—Much land in Kent and other counties is held at Rochester Castle by the tenure of perfect castle guard. On St. Andrew's day, old style, a banner is hung out at the house of the receiver of the rents, and every tenant neglecting then to discharge his proper rent is liable to have it doubled every time he passes the adjacent bridge during the time it remains unpaid.

## MALT.

## EXTRACTS FROM THE FIFTEENTH REPORT OF THE COMMISSIONERS OF EXCISE INQUIRY.

The evidence which is contained in the tenth report, and the facts we have inserted in this report relating to illicit malting in Ireland, preclude any rational expectation that measures of intimidation and punishment will ever completely suppress it.

With regard to England, we conceive that it has been fully established that there also the malt duty is extensively evaded; and we think that we have given, upon the authority of the witnesses, a solution of the circumstances which have led to this evasion, by showing that of the number of 5,219 entered malt-houses, 167 are surveyed only nine times in a fortnight, and 5,052 not more frequently than five in a fortnight. If this system of a five times a fortnight survey is a proper one for enforcing the payment of the duty, then it would appear that the system of daily survey in towns is unnecessary and vexatious. But as it is obvious that it is owing to the circumstance of the survey in towns being a daily survey that the duty is well collected in them, the necessary inference is, that the five times a fortnight survey must be essentially defective: and that the duty will be evaded in the out-walks so long as the temptation to evade it remains so great as it is under the present rate of duty. This we consider a conclusion which cannot be controverted; and, therefore, all that can be done, as it appears to us, for completely putting an end to the existing evasion of duty is, either to convert the five times a fortnight survey, into a daily survey, or to diminish the temptation by reducing the duty.

When we began this inquiry our opinions were not only strongly against the repeal of the malt duty, but also strongly against any reduction of it, in consequence of our being, at that time, under an impression that the duty was not evaded. But according as we became more accurately informed on this point doubts occurred to us respecting the correctness of our opinions, till at length we have been, as it were, constrained to abandon them as to the inexpediency of reducing the duty, from seeing that the Excise cannot contend successfully in Ireland, whilst it is at its present rate, with the facilities with which the laws there are violated; nor in England with the opportunities which the number of entered malt-houses in the out walks afford for carrying on illicit trade.

If, for the purpose of suppressing illicit malting, it should be determined to reduce the duty, it will be most important that the rate of reduction should be settled, not at random, but with reference to some principle, for the correctness of which well established experience can be produced.

We shall, therefore, briefly point out what appears to us to be the right principle on which the rate of the malt duty, as well as of every other Excise duty, should be fixed. The opportunities we have had of tracing the effects of both high and low duties on the effectiveness of the Excise regulations in preventing fraud, confirm us in the opinion we have expressed in former reports, that no Excise duty should be carried beyond the point at which the licensed trader who pays it, can successfully compete with the unlicensed one, who does not pay it. Although it may, at first sight, appear to be impossible that the licensed traders could on this rule pay a rate of duty that would yield a large amount of revenue, experience proves the contrary. The reason of this is, that the fraudulent trader does not benefit by the whole amount of duty evaded, but sustains

great loss from the manner in which he is obliged to carry on his trade; for he is not able to extract from the materials he uses so much of the valuable matter they contain, in consequence of the hurried and imperfect manner he is forced to conduct the various processes of his business, as the legal trader can extract. He is also obliged to protect himself from being informed against by the persons he employs, by paying them very highly, and to incur various other large expenses, in order to escape the penalties to which he is always exposed.

The case of the duty on spirits in Scotland and Ireland shows, by actual experience, that a very large revenue may be obtained with a rate of duty that allows the licensed distillers the means of underselling the unlicensed ones. But this case has been so fully explained in our report on British spirits, that it is unnecessary to say more upon it on the present occasion.

That a similar successful competition might be carried on by the licensed maltsters is shown by the evidence of Mr. Taylor and other witnesses, provided the duty were considerably lowered, and the restrictions on making malt properly modified.

If the duty were reduced by one-half there seems to be reason to expect, provided that a sufficient supply of barley could be obtained, that the reduction would not be followed, ultimately, by any loss of revenue. The diminished price of malt, which would be the necessary consequence of reducing the duty, would lead to the practice of home-brewing being revived, to more beer being drunk, to more malt being used in all the cheaper sorts of beer, and to the discontinuing of the practice of using large quantities of raw corn in the Scotch and Irish breweries. With respect to grain spirits, as the quality of them in Scotland and Ireland depends on the quantity of malt which is used in making them, there can be no doubt that a large reduction in the price of malt would lead to restoring the old practice of using malt to a large amount instead of raw corn. According to return in the Appendix, about 490,000 quarters only of malt are now annually used in the United Kingdom in distillation. The reducing of the duty would also remove the principle obstacle in the way of allowing a drawback of the whole duty paid on the malt used in beer exported to our colonies and foreign countries; and in this way be the means, according to the evidence of Mr. Tennent, of considerably increasing the consumption of malt.

There is one point connected with the reduction of the duty which is particularly deserving of notice, and that is, rendering it practicable, with perfect security to the revenue, to relax the restriction under which the business of making malt is carried on. Whilst the duty is very high, and the temptation, in consequence, very great to evade it, it is necessary to impose severe restrictions to counteract this temptation; and, therefore, one of the best effects of a reduction of duty will be the opportunity which would be afforded of diminishing the interference of legislation with the operations of making malt, and thus of permitting the maltster to carry on his trade in a way to secure, by his skill, the greatest amount of profit on his capital which it is possible for him to make.

Notwithstanding the strong case which seems to have been made out, by the extracts of the evidence which we have quoted, in favour of a reduction of the malt duty, it would be improper to bring this

discussion to a close without again adverting to a subject mentioned in the beginning of this report, namely, the effect of the corn laws in obstructing a free supply of barley to meet the increased demand for it which would arise from reducing the duty. We have already said that the only grounds on which a reduction can be justified, while the present amount of revenue is necessary, is a strong probability that a reduced duty would, by means of an increased consumption, yield as great a revenue as that which is obtained from the present duty; but if the importation of foreign barley be not permitted, the tendency of a reduced duty to increase the consumption of malt would be counteracted by the price of British barley becoming higher in consequence of the new demand for it which would arise from the duty having been lowered; and thus the consequence of a reduction of duty would be, not such an increased consumption of malt as would keep the revenue up to its present amount, but a higher price of barley, and a certain loss of revenue.

As, therefore, there is no probability of a reduced duty being followed by such an increased consumption of malt as would prevent a loss of revenue, so long as the importation of foreign barley is restricted, we are of opinion that it will be preferable to endeavour to check illicit malting by the enforcement of the Excise laws, however inadequate they may be to produce a complete remedy, rather than to try the experiment of stopping it by a reduction of duty. If there were no factitious cause for elevating the price of barley, arising from the direct effect of a duty on foreign barley, or from the indirect effect of duties on other kinds of foreign corn, we should not feel any hesitation in saying that the proper way of dealing with the malt duty would be to reduce it one-half; but nothing in our opinion, can be more unwise than to reduce duties on articles which are fit subjects of taxation, without, at the same time, taking care to secure the most abundant supply that is possible to be secured of the materials which are necessary for their production.

Although, as we have before said, we have no expectation that intimidation and punishment will lead to a complete remedy of the evil of evasion of duty, as now practised in the United Kingdom, we are, however, of opinion that this evil may be diminished, even while the present duty continues, by adopting some measures for counteracting it to which the commissioners (of Excise,) as yet, seem not to have turned their attention.

In England it would appear that more frequent inspection, by superior surveying officers at irregular periods, of the malt-houses in the out-walks would be useful; whilst in Ireland the calling in of the aid of the regular constabulary force, to prevent the violation of the revenue laws, as well as that of the other laws of the land, would, beyond all doubt, contribute to keep down the practice now almost openly carried on in the interior of the country of private malting, in unentered houses.

We also look forward to the discontinuance of the system of giving credit in paying the malt duties, as a measure which, if adopted, would be followed by very good effects.

With respect to the complaints which have been made to us by several maltsters of the malt regulations, we are sensible that the recommendations of changes which we have made to your lordships in this report may fall short of what is expected from us; but we have felt it would not have been consistent with our duty to treat with indifference the able defence which the commissioners have made, in justification of the greater part of their regulations, in

their letter to us already referred to. If, however, the reconsideration and revision of all the provisions of the malt laws, which we have suggested, be carefully and fairly carried into execution, we trust that the general result will be, that every person engaged in the trade will feel satisfied that he is not exposed to a greater degree of interference and inconvenience in carrying on his business than is really unavoidable, in order to secure the revenue, and at the same time give protection to the fair trader.

HENRY PARNELL.

HENRY BERENS.

HENRY L. WICKHAM.

Office of Excise Inquiry, 5, Whitehall-place,  
Aug. 27, 1835.

**RENT AND PRODUCE.**—Every lease ought to recognise and contain a self-acting principle of adjustment between the amount of rent and the price of produce, quite independent either of landlords or tenants: and much of the misfortunes which have befallen the latter, who alone are the real cultivators of the soil, and with whom the interests of agriculture are most strictly and properly identified, may be traced to their ignorance or neglect of this important principle.—Tenants may bear to be reminded, too, that as in their negotiations for a new farm they never give a shilling more rent because the estate happens to be loaded with mortgages or family settlements—or because his Lordship shrugs up his shoulders, and declares that, being called upon to maintain a certain rank and station in the county, he must keep up his rents, and “will do all that he can in the House” to keep up corn—so neither will the merchant give to the tenant one sixpence a quarter more for his wheat because he happens to have a large family or to live in a parish where the poor rates are very high, or to have hired his farm on a long lease at a high rent when wheat was double its present price. The tenant never troubled himself to inquire anything about the incumbrances of the landlord, nor does the merchant about those of the tenant. It may be very generous, and it always sparkles brilliantly in the newspaper, when a landlord remits five or ten per cent. at his audit. But the principle is bad to be so “fettered by a lease” as to make it necessary to have recourse to the degrading experiment of annually bestowing on the one side and of receiving on the other this remission as a gratuitous boon. It alters the proper relation and position of both parties. Let there be a reciprocity and an equality of interest between them, and there will naturally be cultivated a mutual good feeling. But the right feeling is not cultivated when a tenant is annually made to crouch under a sense of obligation and dependence on his landlord, which formed no part of his lease, and which was not and ought not to have been contemplated by him when it was drawn up and signed.—*Bury Post*.

The Glamorganshire Agricultural Society held their grand annual meeting at Cowbridge, on Tuesday, Sept. 22nd, and we congratulate the county on the capital exhibition of stock that was displayed. Mr. Walker, from Worcestershire, was the judge, who expressed great satisfaction with the display, observing that the general improvement of the stock in the county since he filled the same situation two years ago, was highly creditable to the breeders; the arrangement for the accommodation of the stock was also very good. In the evening, about eighty of the most respectable agriculturists and landowners of this and the neighbouring counties, dined together at the Bear Inn, the Hon. W. B. Grey, Vice-President, in the chair, and speeches in accordance with the occasion were delivered by that gentleman and Chas. Morgan, Esq., of Ruperra Castle, the Vice-President. The entertainment, as usual, did credit to Mr. Ballard.

## FEMALE EMIGRATION TO AUSTRALIA

On Thursday, the *Boadicea*, chartered by the Emigration Committee for the conveyance of single females and families to Australia, sailed from Gravesend with 270 souls on board, for Hobart Town. The arrangements for the accommodation and welfare of the emigrants were similar to those adopted on former occasions. The emigrants on this occasion consisted of about 100 Irish girls, 40 from Scotland, and 27 from London and Middlesex, the remainder from other counties in England. The females were 200 in number, and the other passengers consisted of young men and fathers of families, agriculturists, who are much wanted in the colony. Among the emigrants we observed twelve very fine young girls, remarkably well-behaved, and only fifteen years of age, from the Foundling Hospital at Cork, fifty from the Dublin schools, and thirty or forty selected from the other institutions in Ireland. Their demeanour was excellent, and they were accompanied by several experienced matrons, who from motives of pure benevolence, have left their native isle to administer to their comfort and convenience. The majority of them are well educated, and of superior moral and religious habits. The Scotch lasses are, if possible, of a superior class; there were several young women from Edinburgh; and if the single gentlemen in Hobart Town are long insensible to such charms as the fair daughters of Caledonia display, we should say very little gallantry exists in Van Dieman's Land. Among the families are—a Mr. Story, a farmer from Somersetshire, with his wife, five rosy-cheeked, round-faced daughters, between the ages of five and seventeen years, and two boys; a widow from Bristol, with three daughters; Mrs. Strange, a widow of Brighton, with her mother, aged fifty-eight years, and three daughters; and Mr. Thompson, superintendent, and his wife, who fills the situation of matron. The four families are cabin passengers, and are handsomely and conveniently provided for, for which they pay an extra sum. A ship has been chartered by the Irish Female Emigration Committee for the purpose of conveying out single women to Sydney, which is to sail in a few weeks from Cork. Mr. Parsons, a surgeon, who officiated as medical officer of the *Strathfieldsaye*, which sailed from London in 1833 with female emigrants, gave a very interesting account of the condition of the women who were carried out in that ship, and who, he said, were doing well in the colony when he left, a great majority of them having either having met with good husbands or been engaged as farm servants by the settlers. Mr. Parsons states that a wide field is still open for emigration in our Australian colonies and that the want of good farmers and labourers is much felt. It is a well known fact that one free labourer is considered worth four assigned convicts, and is invariably preferred to convicts, and good wages given where they can be procured. Of the useless drones without trade, or habits of industry, there is a superabundance in the colony, men whose only qualifications are those of clerks and shopmen are utterly useless. Shepherds and agriculturists, carpenters, and builders, are those most wanting.

USE OF STEAM POWER IN PROPELLING THRASHING MACHINES.—It is gratifying to remark the very rapid increase of steam engines amongst

the steadings in Fifeshire, nor do we know any fact more highly complimentary to the enterprise of our agriculturists. At this moment the traveller over our county may count nearly thirty engines in the act of thrashing corn; and that he may know where to look for them, we shall mention the names of a good many farms where they are. Steam-engines are in activity at Kinnimont, Newton, Craigie, Seggie, Foodie, Moonzie, Kilmux, Pilmuir, Balmacoll, Falkland Wood, Kilgour, Lochty side, Balgonie Park, Kirkaldy (Mr. Douglas,) Bankhead, Clentry, Balmiel, Torhain, Treaton, Chapel, Wester Bogie, Dalachy, Castleton Hill, South Fod, Methilhill, Kingsdale, Carnbee, and probably a good many others we have not noticed. Comparing Fife with any other county—say Forfarshire, where we do not believe there are half a dozen—how proudly does she stand; and how much of hope does her advanced position hold out in regard of the improvement of our national agriculture so soon as other counties become enlightened and spirited enough to follow in her track. The great extension of the use of steam completely and unanswerably puts down every doubt at first entertained of its utility when applied in this way; and the advantage is indeed so clear that its employment has spread among us with unexampled rapidity—there being not more than three or four of the foregoing engines in action only five years ago! the farmer who uses it will find many other modes of applying conveniently and economically this admirable agent; for instance, how easily may the spare steam be always applied, as it sometimes has been, by intelligent farmers, in stewing the animals' food? Nor is there any difficulty or much expense in adapting an ordinary thrashing mill to be driven by an engine. All that is necessary is the removal of the horse wheel, the building up of the open sides of the shed, its division by an interior wall into two departments—one for the engine and another for the boiler and furnace, and the building of a stalk. Many farmers are deterred from availing themselves of the use of steam, by the idea of the difficulty and expense of buildings for the engine, and it is therefore necessary to attend to what we have now said. We have very little doubt, that in other five years there will scarcely be a steading in the county which has not abandoned the unnecessary and expensive use of horse power in thrashing its corn. Nor is it unworthy of remark, that almost the whole of these engines have been erected at the commencement of leases; and, therefore, a farmer in now entering on a lease, should consider whether he is not better at once to employ steam power. The saving is obvious. On some farms a pair of horses and a man may be dispensed with: and even the very labour saved to the poor horses, let alone the saving of additional corn which is necessary when such hard work is imposed, is of itself no small gain. Landlords in such cases should give every encouragement to their tenants obtaining such an important improvement; and where leases are partly run down, and the tenant may fear a sacrifice at the expiry of his lease, the landlord should at once agree to take the steam engine machinery and buildings off the tenant's hand at a valuation, in the event of the lease not being renewed.—*Fife Herald*.

ESSEX. — CURIOUS CUSTOM. — "THE LAWLESS COURT."—On King's Hill, in Rochford, in the county of Essex, on every Wednesday morning next after Michaelmas day, at cocks' crowing, there is by ancient custom a Court held by the Lord of the Manor of Raleigh, which is vulgarly called the "Lawless Court." The steward and suitors whisper to each other and have no candles, nor any pen and ink, but supply that office with a coal; and he that owes suit or service thereto and appears not, forfeits to the Lord double his rent every hour he is absent. The Court is called "Lawless," because held at an unlawful or lawless hour, or *quia dicta sine lege*. This Lawless Court is imperfectly mentioned by Camden, in his description of Essex, who says this servile attendance was imposed on the tenants of that manor for conspiring, at the like unseasonable time, to raise a commotion.

## ON THE TREATMENT OF FOOT-ROT IN CATTLE.

BY MR. M. POTTIE, YOKER, NEAR GLASGOW.

*(From the Veterinarian.)*

It has been ordained, for wise purposes, that we should have a tendency to consider things which are similar in some respects as similar in all: and, although we have long known that this principle is apt to produce error, there are still very few, perhaps none, who can constantly remember, and act as if they remembered, that two things may be exceedingly alike in one or two relations, and yet altogether different in others.

We are called to treat a few cases of foot-rot in cattle, and there are heat, pain or pressure, swelling, and lameness. The treatment which we adopt with so much advantage, when similar symptoms appear in the foot of the horse, is immediately adopted here, and an analogous result is expected; but we are surprised and disappointed to find it quite different. After many experiments, but which were never regarded as experiments, it becomes apparent that the disease is not of the same nature as that which produces the same symptoms in the horse. Poultices, fomentations, cooling lotions, and bleeding, whether local or general, if not positively injurious, have not the slightest curative power over foul in the foot. Each has been tried, alone and in combination, and not once or twice, but often. Purgatives and cold lotions, when operating together, retard the disease, but do not cure.

The readers of the *Veterinarian* are aware that the inflammatory symptoms which characterize foot-rot in the ox exist for several days; that, at the end of from two to eight or nine days, an abscess appears and bursts, either at the side of the foot or between the toes; that the effects of the first attack are not gone when another takes place; and that this is followed by another and another, until the foot becomes completely disorganized, and the patient reduced to a skeleton. By this time the toes are thrown far apart, the bones are carious, there are sinuses in all directions, and an immense quantity of matter is discharged. In this state a cow under bad management, often continues for six or twelve months.

All this, however, if the patient is put under proper treatment from the beginning, may be easily and certainly avoided. All the practitioner has to do, is to produce a slough, of considerable thickness and extent, from between the toes. There are several escharotics that will do this, but some are too strong and some too weak: the former excite an intolerable degree of pain; the latter operate too slowly, requiring several applications, and often not producing mortification until an abscess has formed, when the use of any caustic is of little service. I find the powdered sulphate of copper answers the purpose better than any agent with which I am acquainted. The foot, in the first place, is well cleaned by washing with hot water and soap; it is dried: a pledget of tow is covered on one side with common tar, and over this is spread a thick layer of the powdered sulphate; the pledget is then introduced between the toes, placed in close contact with the digital commissure, and retained by attaching its ends to a ligature round the pastern. From the moment the escharotic begins to operate, the internal process appears to be arrested; but unless that portion of skin upon which the application is laid sloughs away, the disease will be re-established. In many cases, one dressing is sufficient to produce the sloughing; in others, two or even three dressings may be requisite.

When the commissure is soft, yielding, and moist, one application is in general enough; others are necessary when this part is hard and horny, for then the caustic operates upon it with more difficulty. The escharotic loses its power in about forty-eight hours, and it need not be removed sooner. At the end of this time it will be seen whether or not, another application is necessary. More than three dressings I have never had occasion to employ. The slough comes away with the first, the second, or the third; and, subsequently, the sore is kept clean and washed once or twice a day with the acetate of zinc, or any other astringent lotion. Nothing more is required. The slough once separated, the lameness disappears, and the animal returns to her food, and yields her usual quantity of milk.

I shall not attempt to explain this unorthodox mode of proceeding. It is of no consequence where or how I was taught to adopt such a plan. I do not announce it as a discovery. Within the last twelve months, however, I cannot have tried it on less than a hundred cases, and it has not failed once. Another practitioner in my neighbourhood can testify that it has been equally efficacious in his hands.

13th September, 1835.

**PRICE OF BREAD IN JERSEY.** — We have heard many persons express considerable surprise at the high price of bread in this proverbially cheap Island; and when the perfect freedom of importing foreign corn into Jersey, and the nearly untaxed state of its population are duly considered, it will certainly appear almost beyond belief that the "staff of life" is nearly double the price here as in some parts of the mother country, where the agriculturists are so heavily burthened, and where a tax is levied upon imported corn! Such, however, is the fact; for, while we are paying 1½d per lb for the best bread, the quarter loaf of fine white bread (old weight, 4½ lbs) is now actually selling in Suffolk at 4d the loaf, or something less than 1d the pound! The trifling difference in our weight, as well as the nominal premium of a penny on the English shilling, we are aware, should be taken into the account; but, at the same time, it ought also to be remembered that the journeymen's wages in Jersey are considerably lower than in England. — *Jersey Argus*.

The new act for the abolition of unnecessary oaths came into operation on Friday, and as no voluntary declaration will be received by the magistrates except in the form prescribed by the statute, without alteration or omission, because an indictment could not be sustained for making a false declaration if the prescribed form were not strictly adhered to:—"I, A. B., do solemnly and sincerely declare that —, and I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an act made and passed in the year of the reign of his present Majesty, intitled an act to repeal an act of the present session of parliament, intitled an act for the more effectually abolition of oaths and affirmations taken and made in various departments of the state, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial oaths and affidavits; and to make other provisions for the abolition of unnecessary oaths. Declared and subscribed at this day of , 1835, before me." The 18th clause of the act gives the magistrate unlimited discretion as to the matters which may be declared before him. It recites that it may be necessary and proper in many cases not enumerated in the act to require confirmation of written instruments, allegations, proof of debts, execution of deeds, and other matters; it therefore authorises the magistrate to receive a declaration of these matters "in the form in the schedule to this act annexed, and if any declaration so made shall be false or untrue in any material particular, the person wilfully making such false declaration shall be deemed guilty of a misdemeanor."

## ON ROT IN SHEEP.

(To the Editor of the Quarterly Journal of Agriculture).

The attention of your readers having again been called to the internal rot of sheep, I would humbly offer the following remarks to their consideration, hoping they may be of some use in leading either to a prevention or cure of that distressing disease which has been the means of ruining so many of our poor farmers, and perhaps of injuring the health of many of our people, who have been fed with unwholesome mutton. I first, then, would recommend your readers to read a small book published in 1823, at Berwick-upon-Tweed, by a Lammermuir farmer,\* not that I agree with him as to the cause of the disease, but he gives many interesting facts and useful hints. He supposes that the rot is occasioned by feeding in a luxuriant after-growth of grass, but I have yet to learn that a luxuriant after-growth of clover occasions this disease. The fact I believe to be, that it is some particular plant which affects the animal. It is surely no longer believed that it is wet or cold; for if a ewe, when giving milk, does not suffer, is she more likely to escape the effects of cold than another sheep? But I believe it is admitted by medical men, that women giving milk are not so apt to suffer from poison as other persons; so also with sheep. I am inclined to believe that the butter-cup (*Ranunculus*), is the plant which is the cause of the mischief. Green in his "Universal Herbal" says, that all the parts of this plant are exceedingly acrid. In the Isle of Sky, it is used instead of Spanish flies to raise a blister. Curtis stated that when cattle are tempted or forced to eat it, their mouths become sore and blistered; and, according to Linnæus, sheep and goats eat this plant, but cattle, horses, and even pigs, refuse it. Geese also eat it. Now, sheep and geese are more apt to have enlarged or diseased livers, than any of the other graminivorous animals that I am acquainted with.

But to return to the Lammermuir farmer. He recommends salt as a decided cure for this disease. The dose is 1½ ounce of common salt, given in three-fourths of an English pint of water, to a sheep, with an empty stomach, for three or four mornings. Lime-water is also good. I have seen both given; and, on killing the sheep that had two doses of the salt, there were about 160 flukes taken out of its liver, most of which were dead. But as a preventive is better than a cure, I would call your attention next to White, that close observer of nature. He says in his Natural History of Selborne, that "worms seem to be the great promoters of vegetation, which would proceed tamely without them, by boring, perforating, and loosening the soil, and rendering it pervious to rains and the fibres of plants, by drawing straws and the stalks of leaves into it; and, most of all, by throwing up such infinite numbers of lumps of earth." Again he says, "that the earth without worms would soon become cold, hard-bound, and void of fermentation." But more applicable still to the case of your correspondent, in p. 232, where he says, "Lands that are subject to frequent inunda-

tions are always poor, and probably the occasion may be, because the worms are destroyed." Now, I observe from your correspondent's remarks, p. 503 of vol. v. of your Journal, that his meadow, although well laid down in grass, soon appeared starved, after having been irrigated: so it is well worth his examining whether or not the worms have been destroyed by frequent irrigation? If so, I have no doubt he has got rid of the moles also, as the latter feed chiefly on the former. The Ettrick Shepherd says, vol. ii. p. 700 of your Journal, that it is his opinion, as well as that of shepherds, that the extirpating of moles, or doing away with mole-hills, was the primary cause of the disease amongst sheep, known by the name of pining. Now, the conclusion to which I have come in my own mind is, that earth is necessary for the general health of sheep, be it in the shape of mole-hills or worm-casts. True it is, that there are no moles in the sister island, Old Ireland, and the sheep there are in general, I believe, sound, but there must be plenty of worm-casts. Your correspondent strengthens me in this opinion, that earth is good for sheep, when he states that folding them occasionally in fallow, is sometimes a means of preventing the rot.\*

I watered a field of old grass in summer 1833, which I stocked chiefly with sheep, and I found they soon became all tainted, although those of a neighbour from the said breeder were perfectly sound. The shepherd, who had known my field for many years, said he was not aware that sheep had ever suffered in the field before from the rot; and I now think it very probable that I erred in not stocking the field sufficiently, thus by the length of the grass preventing the sheep from getting at the worm-casts or other earth. It occurs to me, that one reason why the disease of the rot is more common in England than in Scotland is, that they do not feed their grass so close as we do. Besides, they do not clean their fallows so well, and have more butter-cup, having older and richer pasture. The meadows in the neighbourhood of your correspondent are entirely new, so perhaps the worms are not yet destroyed, which may account for no rot being in these pastures; and those that are watered by other streams may perhaps be supplied with mud or earth from such streams.

It is a custom at the Duke of Montrose's, and with others who feed pigs, to give them occasionally ashes or cinders; and as a pig is very apt to overeat itself, and to take all sorts of mixtures, it ought always (when prevented by confinement from getting at the earth of the field) to be provided with some alkali, to correct the acidity in its stomach. I had some time ago a large fat hog, which was confined, and kept very clean, getting nothing to eat but meal of various kinds, with milk; and just about the time I intended to kill it, I was prevented by its becoming very costive and unwell. I did not know how to administer any opening medicine to so strong an animal, but in turning it out of the sty, I found it began to eat earth and lime; I therefore immediately mixed some magnesia with milk, and it soon took a sufficient quantity of it. I would also mention, that when the root of the bitter cassia is given, in the West Indies, washed to pigs, it kills them, but when they make their way into the provision grounds, and take plenty of earth with this root, it has apparently no bad effects on them.

It ought to be generally known whether potatoes, when given raw to pigs or cattle, should be washed.

\* This is an excellent practical treatise on the management of sheep in upland pastures. Its author, the late Mr. John Fairbairn, of Hallyburton, we had the pleasure of knowing well; and many will bear us out when we state that no Lammermuir farmer could show a better flock of Cheviot sheep than he had. We may mention, as our correspondent only alludes to the former paper on rot arising from water meadows that this paper came to hand too late for insertion in our last number.—EDITOR.

\* Buckbean (*Menyanthes*), class 5, order 1, is said to be a cure for the rot in sheep.

I know not what is the best corrective for the poison of the solanum family, but an alkali is given to counteract the bad effects of meadow saffron and prussic acid. At all events, some earth may be the means of preventing swelling in cattle, when feeding either on turnips or potatoes\*. I remember a butcher in the West Indies telling me, that he found cattle which were fed in pastures, through which a pure running river passed, had their livers always diseased, whilst those cattle which had water to drink out of filthy stagnant ponds, in which they stood for many hours in the day, had their livers quite sound. He and I both thought at the time, that it was the difference of temperature in the water, but I am now inclined to think that the earth was the means of keeping the liver sound.

I hope these few remarks may be of some use to your correspondent, or may be the means of drawing out some information from others. Whether the rot is occasioned by some particular plant, or by a luxuriant after-growth occasioning a fermentation in the stomach of the animal, my firm conviction is, that salt or earth, or both, are of use to graminivorous animals, as grass is occasionally to dogs and cats. Every observer must have seen horses eagerly chewing the roots of grass with earth, and grooms are aware that it is a bad sign of the state of the horse's stomach. Chalk is given to calves, and lime or shell gravel to fowls.

I would now ask, what takes place if a sheep eats some earth? does it not absorb the acid in its stomach and form a salt, thus in part agreeing with the recipe of the Lammernuir farmer? He mentions a striking fact (in his book before referred to), that the shepherds in Spain, while feeding their flocks on land with limestone, do not give salt to their sheep, but have occasion to do so when feeding them on any other soils; which I would account for by the lime correcting the acidity and forming salt. I may here mention the way in which salt is given to sheep in the West Indies; a large cask without ends is laid upon its side on the ground, a small hole being dug for the swell of the cask; four stobs or stakes are then driven into the ground, two on each side of the cask, to keep it steady; the salt is then put into it, and so protected from the rain. Those who give salt in this way, and feed their pasture close, so that the sheep can get at the worm-casts, need not, I think, be much afraid of either the internal or foot-rot.

I have thus attempted to say a word in favour of the worm, as the kind-hearted Ettrick Shepherd stood forward in defence of the mole, rook and wood pigeon. I recollect destroying almost all the vermin in a large district of country in Perthshire, with a view of increasing the game; but the rabbits multiplied to such an extent as to become an immense nuisance. By the way, may not the increase of field-mice in a district in France, mentioned in the miscellaneous notices of your last number but one, be accounted for in the same way? I would recommend to them a large importation of owls. If man sets his wisdom in opposition to the all-wise Lord of the Universe, and destroys in a small degree the balance of creation, every thing suffers from it. We are indeed wonderfully connected together; yes, the meanest and most grovelling animal is needful for the well-being of the whole.

S. W

## QUANTITY OF SEED.

(From Sinclair.)

Whereas, had there been only a due proportion of plants, the exhaustion, during winter and spring, would have been less severe, and the strength of the soil would have been reserved, for the more material purpose of perfecting the plants in harvest.

In treating of this subject, it may be proper to lay down, 1. The rules to be recommended respecting the quantity of seed in general; and, 2. The fittest proportions for the different crops.

### GENERAL RULES.

1. The first point to be considered, is the climate. In a district where a crop is likely to experience favourable seasons, a less quantity of seed will be required, than where it is liable to a succession of variable weather, and occasionally, to great storms of rain or snow or too severe frosts. Indeed where the climate is uncertain, it is necessary to employ a sufficiency of seed to provide against accidents.

2. The nature of the soil, and its state of fertility are the next points to be discussed. On light thin soils, for the reasons already assigned, the quantity of seed ought to be moderate; whereas, in strong, stiff, wet, retentive soils, on the other hand, as the plants seldom branch off much from the roots, a large proportion of seed will be necessary, in order to secure such abundant crops, as lands of this description are capable of supporting. But where such lands are well prepared, rendered friable by a summer fallow, and in high condition, a small quantity of seed is sufficient; for though the crop may appear thin during the winter, the seedling plants have time and vigour enough to fill up the field, by means of suckers, or lateral plants, which branch out from the principal root, and produce a full crop in autumn.

3. The next point for consideration, is, the season when the seed is sown; for it is evident, that seed sown early, takes deeper root, and has more time to branch out additional shoots, than that which is late sown. Hence a less quantity is sufficient. Indeed, with late sowing, the progress of the crop may be retarded by dry and hot weather, unless a large quantity of seed be employed, so as to afford protection to the soil from the mischiefs of evaporation, by the plants growing closely together. It seems to be a judicious rule, on soils of a medium quality, where wheat is sown broad cast, to use about two bushels and a half per acre, towards the latter end of September, and to add a gallon of seed for every fortnight afterwards.

4. The state of the weather, when the seed is put into the ground, must likewise be considered; for where the season is very dry, and where there is a small proportion of moisture in the soil, more of the seed may fail to vegetate, than where the contrary is the case. Hence a larger quantity is required; and hence the propriety, not only of a larger quantity of seed, but the practice of steeping and of putting in the seed in such dry seasons, immediately after the plough.

5. The manner in which the operations of sowing is carried on, it is obvious, must make some difference in the quantity sown. Where the broad cast system is adopted, a larger quantity of seed is required, than where the grains are deposited, with equality, and exactness, only on certain portions of the land as is the case in the drill and dibbling methods. Where the grain is scattered over the whole surface of the soil, in some measure at random, it is exposed to the depredation of birds, and some of the seeds may not be placed in a situation favourable to vegetation. At the same time, under the drill system, the saving of seed cannot be carried to any great extent, without the risk of disappointment, though it may in dibbling.

In regulating the quantity of seed, it is necessary also to have in view, whether clover is to be sown with the grain; for in that case, it is evident, that a smaller quantity of the grain seed ought to be used, otherwise the clover may be materially injured, by a superabundant crop of grain.

7. The quality of the seed is another point to be at-

\* A large quantity of earth, particularly in wet weather, eaten with turnips or potatoes, will cause cattle to scour, a small quantity will not; but scouring prevents swelling from either root.—EDITOR.

tended to ; for it cannot be doubted, that a less quantity will be sufficient, when it is known to be good and perfect of its sort, than when from age, an unfavourable harvest, or otherwise, it is known to be the reverse. In the former case, every seed will vegetate, whereas, in the latter, many must prove defective.

8. The last point relates to the size of the seed ; for the smaller the size, the greater number of plants will be produced from a certain weight of corn ; and when the grain is round and plump, its being of moderate size, does not make it less fit for the purposes of vegetation.

#### PROPORTIONS OF SEED FOR THE DIFFERENT CROPS.

It is to be regretted, that the proportions of seed best calculated to afford the fullest and most abundant produce, in different crops, and under various circumstances, has not yet been decided by the aid of experimental investigation. The following hints, it is hoped, will throw some light on this branch of the subject.

WHEAT.—When land is in high condition, and adapted for wheat, more especially after a summer-fallow, about two bushels per acre have been generally found sufficient, in the best cultivated districts of Scotland. Bean stubbles require more seed than summer-fallows, because the seed, from the roughness of the surface, cannot be so well distributed ; and clover leys, ought to have more seed than even bean stubbles. Turnip land, sown with wheat in spring, must have a still more ample allowance, as the shorter period of growth does not leave a sufficient interval for tillering, and many of the suckers that are produced, never come to maturity. In these cases, from three bushels up to rather less than four, may be required. In England, it is calculated that about two bushels and a half is the medium quantity of seed wheat throughout the kingdom, though it is often more.

BARLEY.—The quantity of seed for a crop of barley, varies from two bushels and a half, to four bushels per acre ; but it is always safer to give too much than too little seed. It is a rule indeed, with all spring sown grain, to give a sufficient quantity of seed, to ensure a full crop from the first growth, and not to depend upon tillering, or planting out. With a full quantity of seed, the crop grows, and ripens equally, and, unless in very unfavourable seasons, the grain is uniformly good. Barley, being generally sown in the dry seasons of the year, the plants are often stunted in their growth, and unable to send out off-sets to stock the soil. The plant may afterwards stool or tiller at a later period ; but these young shoots, cannot be expected to arrive at maturity, or if their ripening is waited for, there is a great risk of losing the first, or earlier growth of the crop.

FRENCH CARTS.—After staying a couple of days at Rouen, we proceeded by the same mode of conveyance to St. Germain : we went by the upper road, which is not very interesting. On the way we passed many carts drawn by horses, such as I have described. The construction of these carts struck me as being particularly well adapted to the roads on which they travel. The body is composed of a frame of great length, extending entirely over the shaft-horse, and so constructed that, by means of a winch, the frame may be moved backwards and forwards, so as to be balanced on the two wheels which support it. These wheels are large, and stand perfectly upright, with very deep naves, so that they can preserve their perpendicular without difficulty ; and the lynch-pin is so placed as to allow of considerable horizontal play on the axle, which, on a rough *pavé*, is a great advantage. How much superior is this to the wheels of our travelling waggons, the felices of which, being frustrums of cones, a good deal of power must necessarily be lost in keeping them in a straight line, while the grinding motion thus occasioned must be very injurious to the roads ! These carts are also fitted with a contrivance for retarding the revolution of the wheels on descending hills, by pressure of the circumference, to serve instead of a drag.—From Captain Blakiston's new work—*Twenty Years of Retirement*.

## HAMPSHIRE.

*From Kennedy and Grainger's Practice of Tenancy in the grazing districts of Great Britain, published in 1829.*

The whitest fleeces in Hampshire are invariably produced upon a white soil, but with more certainty upon a white clay or marl, than upon chalk, it having been constantly observed, that upon such a soil they are finer than upon any other, and also much softer to the touch ; though it is equally true, that chalky soils produce a fine and white wool. Deep black, hungry, and bad land, produces a coarse and harsh wool. Chalky ground, and fine hazle soils, with a substratum of chalk, produce a wool, which always sell well, it being very suitable for the purposes of the manufacturer, in consequence of its furnishing a cloth of softer and better quality. Sheep, in good condition as to food and health, are not, generally speaking, found wanting in respect of a fine growth of wool, but if fed upon a poor black land, the small particles of surface soil are drifted throughout the wool, which dry up or absorb that necessary nourishment, the yolk ; the effect is easily discovered by the feel of wool so grown.

It is found here, as in other districts, that the effect of the sun and temperature upon newly shorn sheep, produces a harshness of feel to the touch ; but the wool becomes soft in proportion to its length, and, perhaps, that which is in the first instance hardest, has afterwards the most vigorous growth.

With regard to smearing or greasing sheep, the prevalent opinion in this county is, that unguents are of no service to the future growth of wool ; but on the contrary, that the materials of which they are composed, are thrown up as the fleece increases, and become, as it were, so much filth which requires to be washed away ; the natural perspiration of a healthy sheep, is here supposed to be the best guarantee for the perfection of the wool. This opinion, as to the inutility of unguents, is even extended to the time of clipping, or shearing, it being thought, that at the season of the year when the clipping takes place, exposure to the air is a comfort to the sheep ; whilst nature provides a warmth of wool sufficient for the winter, it is also believed, that in the latter season the wet and mud would adhere to the greased fleece, much more than to one not greased.

A good pasture is believed in Hampshire, to be every thing with regard to the growth and improvement of both carcass and fleece ; and though it is in some degree admitted, that the application of an unguent might have a tendency to prevent cutaneous diseases, and the effects arising from the fly, if used immediately after shearing ; yet it is the prevalent opinion that these mischiefs are chiefly engendered under the cover of a long coat of wool, and that they may in general be remedied or removed after shearing, without having recourse to these applications. In a similar spirit, whilst it is agreed, that sheep, greased with an unguent, might throw off snow or rain, sooner than those which had not been greased, yet it is objected, that the filth and dust would, in consequence of the application of the unguent, adhere to the fleece, in a proportion equivalent, if such a term may so be used, to the throwing off of rain or snow. An equality of temperature, and a sufficiency of good feed, are here considered, perhaps it may be said almost exclusively, the most likely methods to ensure a good fleece.

With regard to the washing of sheep, it is not

usual, in Hampshire, to perform that operation in ponds, but generally in rivers, where the filth is carried away by the stream; the washed wool is found to sell the best. The housing or coting of sheep is not considered here to be of that use or importance which it is thought in some other districts, the sheep farmers believing a free and fine air to be essential to the health of the animal, and being fearful of the consequences in this respect of the confinement of housing, whilst they are also of opinion, that the expense which must in such case be unavoidably incurred, would not be repaid by any additional returns of profit.

It is not thought here, that the removal of sheep to a luxuriant pasture, has any effect in producing a coarser wool; but this must, of course, be understood as not applying to a rank marshy pasture. The Merino and Spanish sheep are supposed, in this district, to be much longer than any other breed in benefiting by a change; those sheep which are in the most thriving state, and the most ready to fatten, are believed to feel the effects of a change the quickest, whether it is from a worse to a better pasture, or the contrary. A mild winter is not believed, by the Hampshire sheep farmers, to have any effect in increasing the weight of the fleece at the ensuing clip, or that the latter is diminished through the operation of a severe one, or that in either case the wool is coarser; it is only a wet season that is considered to injure the quality of the wool. This, however, must be taken with the qualification or limitation, that a dearth of either winter or summer food is always injurious both to the carcass and the wool.

Open sheds, where sheep might resort for shelter from the inclemency of the weather, or too great heat, it is thought here would be very desirable on sheep farms, especially those in exposed situations.

## BUYING AND SELLING OF WOOL.

TO THE EDITOR OF THE EXETER FLYING-POST.

SIR,—In a late number of your paper I noticed an article inquiring if the present mode of buying and selling Wool will be legal under the new Law for regulating Weights and Measures, and observing that the present mode of weighing the article is stated very erroneously, I am induced to drop you a few lines, knowing it to be your wish to give correct statements. The general mode is by weighing four list of 63lbs, (which is equivalent to 18 stone of 14lbs.) This is only reckoned for as a pack of 240lbs. The allowance of 12lb on the pack does not by any means compensate for the dung, yolk, &c., that the Wool contains, as in heavy soils the pack will not yield 180lbs of clean Wool; and it is the practice of many Wool-growers to wind up in the fleece all the dung, pitch, and whatever is on or about the Sheep at the time it is shorn, notwithstanding there is a considerable penalty for so doing.—Yours, truly,

AN OLD DEALER IN WOOL.

Plymouth, Sept. 1835.

N.B.—You stated the practice was four lists of 6lbs, making 204lbs to the pack.

WOOL.—A gentleman we met with the other day, who is most extensively engaged in the wool trade, communicated, in the course of conversation, the following important communication:—As regards the clip of 1835, our informant is of opinion that it is rather above than under a fair average. Throughout the season the sheep fared better in the south than the north, and, both as regards quantity and quality, the wool crop, over a wide extent of country, is to say the very least, nowise inferior to that of the last three or

four years. Salted butter, unmixed with any other ingredient, not only checks vermin, but actually promotes the growth of the fleece. Betwixt buttered and purely white wool the difference of price at present is little more than 3d per stone. As our correspondent complains that our quotations, as copied from the Liverpool papers, are occasionally a shade too high, we substitute this week what he assures us is a correct and amended list. Highland laid wool, from 10s to 10s 3d per stone of 240 lbs; Highland white, from 14s 6d to 15s per do.; Cheviot laid and washed wool, 19s per do. —*Dumfries Courier*.

DUTCH AGRICULTURE.—The Dutch journals of the 4th instant contain a decree issued by the King of Holland, from which we learn, that in consequence of the depressed state of agriculture in that country, it has been resolved to impose an additional duty upon the importation of foreign corn. Until a law to that effect shall have been passed by the States General, it is decreed that after the 29th of September there shall be given, besides the payment of the existing duties, sufficient security for the payment of the higher import duty contemplated by the Legislature.

“On all importations of wheat spilter, buck wheat, rye, barley, and oats, subsequently to the date of this ordinance, there shall be given, besides the payment of the existing duties, sufficient security for the payment of the higher import duty which shall in the sequel be imposed by the law which will be proposed by our order in the approaching session of the States General. The amount of the said security shall be estimated as follows:

|                                       |          |
|---------------------------------------|----------|
| Wheat and spilter, per mu. . . . .    | 2f. 22c. |
| Buck wheat and rye, per ditto . . . . | 0f. 81c. |
| Barley, per ditto . . . . .           | 0f. 58c. |
| Oats, per ditto . . . . .             | 0f. 66c. |

Reserving the option of the importer to deposit such imported corn in entrepot, according to the existing laws.

The sale of Mr. Fuller's Sussex bred neat stock, took place at Selmeaton on Thursday last, and attracted a large assemblage of buyers and others, amounting in number to between 5, and 600, and no doubt, as Verrall stated in his advertisement, they were gratified with the *treat*; and we should judge from the prices that were obtained, the event proved a very palatable dish to the respected proprietor.

|                                             | each. | highest price. |
|---------------------------------------------|-------|----------------|
| 13 Cows, (two best being barrens) . . . . . | £28 0 | 40 gs.         |
| averaged at . . . . .                       | 28 0  | 30             |
| 4 three-year old Heifers, at . . . . .      | 30 15 | 38             |
| 8 two-year old Ditto, at . . . . .          | 21 0  | 26             |
| 10 yearling Ditto, . . . . .                | 15 0  | 21½            |
| 1 Cow Calves, . . . . .                     | 31 10 | 0              |
| 1 five-year old Bull, sold for . . . . .    | 38 17 | 0              |
| 1 two-year Ditto, . . . . .                 | 35 14 | 0              |
| 1 one-year Ditto, . . . . .                 | 44 2  | 0              |
| 1 Bull Calf, . . . . .                      | 31 10 | 0              |
| 1 Ditto, . . . . .                          | 26 5  | 0              |
| 1 Ditto, . . . . .                          | 8 0   | 0              |
| 7 Steer Calves, averaged at . . . . .       | 12 10 | 0              |
| 9 yearling Steers, at . . . . .             | 18 0  | 0              |
| 8 two-year old Ditto, at . . . . .          | 21 0  | 0              |
| 16 Oxen, at . . . . .                       |       |                |

The stock was very even as to the quality and prices they produced.

At the sale of oak timber at the King's House, which was numerous and respectfully attended, thirty-six lots, containing nearly seventeen hundred trees, went off briskly at an average of about 2s 3d per foot. About fourteen thousand faggots and a quantity of cord wood, was also disposed of at reasonable prices, which will afford an excellent supply of labour and fuel for the poor during the approaching season.

## NETHERBY AGRICULTURAL MEETING.

The annual meeting of this Society took place under circumstances which gave it a more than ordinary interest. It will be recollected that last year the tenantry of Sir James Graham, as a mark of their respect and gratitude, invited the hon. baronet to a dinner. On this occasion he returned the compliment, and never did the meeting of such a number of individuals pass off with greater glee and satisfaction.

The show of cattle was appointed to take place at Croft Head, about a mile and a half beyond Longtown, and very near Netherby Hall. The show of stock, we understand, was better than on many previous occasions, and the quality was very superior.

The dinner was appointed to take place in the large farm-yard, at Croft Head, which was fitted up in a very tasty and superb style, under the direction of Mr. Gray. Sir James Graham was in the chair, supported on the right by Sir Pulteney Malcolm, and on his left by the Rev. W. Graham, of Arthuret. From this principal table, seven others extended in a longitudinal direction, and the whole tent was supported by a great number of pillars, completely enveloped in laurels, firs, and other evergreens, and the whole effect of the scene was that of a sumptuous *fête champêtre*. After the cloth was drawn, the tables appeared covered with fine green baize—on which a bottle of wine was immediately placed for every guest, and then followed those proceedings which will be found detailed at length in the subjoined report:—

SIR JAMES GRAHAM having inquired several times whether every one present was supplied with wine, proposed the health of his Majesty, King William, with three times three.

After the cheering had subsided Sir James proposed the Queen and the rest of the Royal Family.

SIR JAMES GRAHAM then proposed the British Navy, and good health to Sir Pulteney Malcolm.—This toast was drunk with three times three, and one cheer more.

SIR PULTENEY MALCOLM returned thanks.—The gallant Admiral sat down amid very loud cheering.

SIR JAMES GRAHAM gave the British Army and Col. Mein, with three times three.

Col. MEIN returned thanks.

SIR JAMES GRAHAM then proposed "the land we live in."—This was drunk with three times three cheers.

After this SIR JAMES GRAHAM read over the list of premiums, prefacing it by the following observations:—I can assure you, my friends, it is impossible for me to express in adequate terms the pleasure I see in beholding you all here to-day, and I might without further consideration proceed at once to the more immediate business of our assembly by reading over the awards of the judges, but it is necessary for me, for the information of some gentlemen who are strangers shortly to explain that at the annual meeting of the Agricultural Society established at Netherby, premiums are awarded, part by myself, and part by the society, for encouraging improvements and rewarding industry in the culture of the neighbouring lands. The farms are regularly visited, and on this occasion I have been informed by the judges that they have had great difficulty in determining to whom the premiums should be awarded, for not only have the competitors for the various prizes been exceedingly numerous but it must be added that all these competitors have displayed such excellent management that it is diffi-

cult to say which is the best. After all the deliberation they could give to the subject, and amid the difficulties they have had to contend with, the whole of the competitors having showed in very excellent condition they have awarded the chief prize, a silver teapot, value 10*l*, to Mr. Wright, of Oak Bank. (*Loud applause.*)

MR. WRIGHT having been called upon to receive the prize, was addressed by the Chairman as follows:—Sir, I cannot convey in sufficiently expressive language the sense I entertain of your excellent management ever since I have had the pleasure of knowing you, now many years, and as a proof of that feeling I present you with this piece of plate.

In awarding the prize for the second class, the CHAIRMAN said,—It is impossible to over-estimate the exertions made by the farmers on the respective farms, and to their honour be it spoken, as their leases have been drawing nearer to a close, I can safely assert, as the proprietor, that the land is every year in better and better condition. I should be ashamed of myself if I were not proud of this, and if I did not hold them up as an example to all the tenantry throughout the empire; it is a characteristic which demands my highest admiration. The second prize has been awarded to Mr. John Johnston, of Pedder Hill, but I am bound to say that the Messrs. Turner have run him hard, and I hope they will be more fortunate next year and reap the reward which they have so richly deserved.

In presenting the piece of plate, SIR JAMES GRAHAM said, as your friend and landlord I cannot convey to you the pleasure I feel in awarding to you this testimony of the approbation of the Netherby Agricultural Society.

In awarding the premium to the third class, SIR JAMES GRAHAM observed, I need hardly tell you, gentlemen, as a proof of the absence of every thing like partiality in the distribution of the premiums, that no regard is paid to the person of the competitor; thus, for instance, the third prize is given to Mr. Richmond Blaylock, of the Barn, who has not only lately come among us, but is nearly a stranger to us all.—Then addressing Mr. Blaylock, Sir James said—I have great pleasure in presenting this to you, Sir; I myself, having gone over your farm within the last few days can bear testimony to the excellence of your management.

In presenting the next premium to Mr. Tinning, the Chairman said—nothing can be more satisfactory than your exertions have been, and I am glad you have received the reward which is your due.

To Mr. William Tweddle he made similar remarks.

The CHAIRMAN then said—the next is a premium, gentlemen, to which I would particularly call your attention, because it is relative to a matter on which I have ever had a strong feeling. When I first came to this estate I believe, without exception, it was the wettest in the North of England; as a practical farmer I saw the necessity of immediately draining it, but all my endeavours to effect that object would have been as nothing without the co-operation of the tenantry; but now I may say with gratitude that a very wet estate has been converted into a dry one, but while I say this, I must again remark that all my exertions would have been useless without the aid of my friends around me, and the premiums which I have year after year offered on this subject, I am convinced have been of the utmost value to my estate; for of this truth I am quite satisfied that in this Northern climate—which is a wet climate—there is nothing so calculated to improve the soil as draining. I have on many former occasions had the

pleasure of awarding premiums on this subject, but the competitors this year really far transcend all previous efforts. It is but justice, however, not to forget what has been done, by the tenants in antecedent years.—The right hon. baronet then read over a calculation of the quantity of tiles used, and the number of miles thus intersected; the result was really astonishing, and by some would be deemed incredible. In awarding the head prize to Mr. Thomas Little, of Heatheryknow, the CHAIRMAN,—I have the greatest pleasure in awarding you this premium, as you are one of my oldest friends, and long a faithful servant to my revered father.

The farmer who produced the best lot of five Galloway cows in milk, was Mr. John Johnston, of Pedderhill, and in awarding him the prize, Sir JAMES GRAHAM said, I cannot refrain from expressing my satisfaction at the improved appearance of the Galloway stock beyond any former occasion. I take great blame to myself for having endeavoured to introduce, with considerable tenacity, the short horned breed, which I am now thoroughly convinced is not so well adapted to thrive in the climate of this part of the country. But having now taken the Galloway breed, as decidedly the best and most profitable, it has been my earnest endeavour to obtain from Galloway the best breed of cattle, in order to introduce them among the tenants on my estate.

In awarding the prize given to Mr. John Birrell of Rosetrees, Sir JAMES GRAHAM said I have one thing to quarrel with you about, Sir; I am very fond of moor game shooting but you have cut up the moss into such fine arable land, that I have scarcely any ground left to shoot over.—(Laughter.)

Respecting the exertions of Mr. John Ferguson of Lynemoor, the Chairman remarked that from a slip of barren moor, he had cultivated one of the finest gardens to be seen in the North of England.

Sir James then went through the premiums given by the Netherby Farmers' Society, taking the opportunity of praising the exertions of the candidates. At the close of the list he said,—I may now be excused, gentlemen, for proposing the toast I am about to give, which is the health of a very numerous portion of those now present. I can assure you I rejoice in beholding you all around me, and am only afraid that the accommodation provided for you is not so comfortable as I could desire, for we are a very numerous family. (Cheers.) I use that phrase in its most honest sense, for we live so happily together that when I look around I feel myself surrounded by friends who have the esteem of brotherhood. And on this occasion I should be the most ungrateful man breathing on the earth, if I did not take the earliest opportunity of proposing the toast I am about to give; for I do not think there is a landlord in England more indebted to any body of men than I am to those now around me, and while I am called to give this due acknowledgment to them, I may add my strong desire while I hold this property, that the same friendly feeling may continue, so that when my days are ended, those who follow me shall bear the generous evidence of my surviving tenantry. I am sure the gentlemen who have honoured me with their company as strangers on this occasion will excuse me if I take this opportunity of returning my heart-felt thanks, and testifying my gratitude by proposing the health of the tenantry on the Netherby estate. I have already adverted to the state in which I first entered upon the lands at Netherby, but I may add that I think the cultivation of this estate may now bear competition with most estates where there exists a similarity of soil. I speak of that perhaps with some little hesitation, but

there is another, and to me a most grateful subject, on which I can speak without the least hesitation, that is, that I will with the utmost confidence, challenge any landlord in the kingdom to produce a body of tenants more honourable, more intelligent, more affectionate, more confiding, more industrious, and more worthy than the Netherby tenants, whose health I now propose with three times three.

After the cheering had subsided, Mr. GIBBONS, of Mossband rose and said, I am not in the habit of making long speeches, but beg leave, gentlemen, to propose the health of a good landlord and a kind friend at the same time. Let us drink with the enthusiasm it deserves,—Sir James Graham, the kind and generous landlord.—This was received with a burst of applause, and hearty cheering which was protracted for some minutes.

On rising Sir JAMES GRAHAM was again honoured with a simultaneous cheer, and then spoke as follows:—Gentlemen, my friend Mr. Gibbons, who has so kindly proposed my health on the present occasion, has told you he is not in the habit of making long speeches, and I shall certainly follow his example, by contenting myself with briefly and sincerely avowing the sentiments of pleasure I feel at the warm manner in which you have recognized my exertions. Gentlemen, I do confess that it has been my object through life to be surrounded by a happy and grateful tenantry: there may be higher, and I fear me more empty ambitions, but I can only say that the utmost of my ambition amounts to this, that while I continue to hold this estate I may so demean myself that when I am no more in the land my memory shall testify that I have proved myself a kind and generous landlord; and to the best of my endeavour nothing shall be wanting to maintain this character. (Loud cheering.) I can truly say, gentlemen, that I have no wish so near my heart as to deserve your approving testimony. This is the highest reward I can ever hope to maintain, and neither state nor sovereignty, nor any thing else to which the power of reward belongs, would ever confer upon me the delight of your esteem; this is now my greatest pride, the preservation will be my greatest desire, and the memory of it will be the proudest token I can bequeath to my children. (Very loud cheering.)—And gentlemen, deeply as I feel this, I am sure that I may add that I enjoy the good will, and neighbourly feeling of the manors of Bewcastle, Nicholforest, and Solport, whose health I now propose, with three times three.

Mr. JOHN DOGSON, of Roanstreets, in Bewcastle, rose to return thanks: he said that in consequence of being one of the freehold tenants of the manors of Bewcastle, Nicholforest, and Solport, he begged to say that so far as regarded agricultural improvements they were in some measure not undeserving the compliment paid them. The great demand for lime and coal at the extensive works of Sir James, in these manors, and the demand for draining tiles at the tile-kilns of Mr. Hallyburton Little, were proofs of the attention they paid to agricultural improvements.—The manors of Nicholforest and Solport, he begged leave to say, were managed with spirit and judgment, and the fine crops of corn now waving in the large corn-fields almost within a stone throw of Christenbury craigs, was a convincing proof that the farmers of the manor of Bewcastle were not behind their neighbours in farm management. Mr. Dogson then proceeded as follows:—our wives, said he, who are careful and industrious, take upon themselves the management of the dairy department, and make butter and cheese equal to any that is sent to the London market,—and they also rear us up fine

families of healthy sons and daughters, who assist us in our farming improvements. (*Cheers.*) Our sons at an early age take a part in the labours of the field; they are excellent ploughmen, much better than some he had seen in the neighbourhood of London, where one man holds the plough and another man drives the horses, and even in that case they make ridges as crooked as the serpent that deceived old mother Eve in the garden of Eden. (*Cheers and laughter.*) Our wives also learn our daughters to knit and sew, and other necessary acquirements in housewifery, but I believe our daughters learn themselves to get husbands, for they in general get married as soon and as well as they possibly can, and they in their turn become mothers to a young and rising generation who will fill our places in society when we are "gone to that bourne from whence no traveller returns." (*Much cheering.*) Mr. DOUGLSON then concluded by saying that the tenants of the manor of Bewcastle, Nicholforest, and Solport would always go forward with agricultural improvements.

Sir JAMES GRAHAM then gave a toast "both sides of the Border."—After that he said, I rise to propose a toast which I am confident will give the utmost satisfaction. In days long gone by, gentlemen, many angry feuds existed; and bitter feeling, strife, and war prevailed throughout the counties on both sides of the border; but I am happy to say that those days are long since passed, and the only feeling that now exists is an honest rivalry in the cultivation and improvement of our native soil, and industry which is the parent of improvement and of a contented life here reigns triumphant. And the consequence naturally is, that as I think, there cannot be a happier district than that on the other side of the border, Eskdale and Liddesdale. I am happy to inform you that they have there introduced the same system which we are, this day, assembled to carry into full operation, and long may they flourish. I am about to give you the health of a landlord, gentlemen, whom I highly respect, who lives among his tenants, and is proud of living among them, and meeting with them on every occasion—I mean the Duke of Buccleugh, and the Eskdale and Liddesdale Pastoral Society, coupling with it the name of Mr. Maxwell, whom I am proud to see here on this occasion. (Three times three.)

Mr. MAXWELL returned thanks in a few words.

Song—Mr. Teather, "The heart that can feel for another."

Sir JAMES GRAHAM—Gentlemen, the excellent sentiment which you have just heard in that song is the true secret of good tenantry—of a perfect understanding between landlord and tenant. It is the heart that can feel for another that makes a kind landlord and a considerate, confiding tenantry, making due allowance for different circumstances in which we are sometimes placed. I beg therefore to propose as a toast kind landlords and confiding tenants.

Mr. SCOTT ELLIOT said, gentlemen, there are other affections than those of landlord and tenant, which develop the feeling heart. And I think we have unfortunately too long delayed to notice the health of a lady as distinguished for virtue, affection, and abilities as she is for the station she occupies in society—Lady Graham, the Baroness of the Manor, with three times three, and one cheer more.

Sir JAMES GRAHAM said,—I am sure you will all agree with me, gentlemen, that is not a manly heart that is not sometimes influenced by the wife he sincerely loves. And I cannot address you from this place, where I resided for the first four or five years after my marriage, with so much happiness, without

alluding to the influence of which I have spoken. And this much I may say of that influence that it was never used except to lead me to my home, and that home, by her influence, was best adapted to make me and those around me happy. (*Loud cheering.*) Gentlemen, I thank you very cordially, and having said this much, I will now propose another toast, connected more especially with the object of this meeting, over which I have now the pleasure of presiding. Gentlemen, I should be forgetful of deep obligations, which to the last hour of my life I am sure I never ought to forget, if I did not, on all feasible occasions, tender my thanks to the tenantry of Netherby and the outer manors; and there are many connected with this county, to whom, while life shall last, and under every change of circumstances, I shall ever acknowledge my obligations and gratitude. Permit me to tender my sense of their kindness. It was from my earliest youth my ambition to represent my native county of Cumberland in Parliament, but not to effect that purpose by sinister or any other unjust influence; I relied upon the unbought, the unpurchasable confidence of a body of men whose confidence could only be obtained by a continued course of good conduct. (*Cheers.*) I allude, gentlemen, to the yeomanry of this independent county, and from them I have received constant and honourable support; and whatever may be the case for the future the past cannot be forgotten, and I for one shall ever maintain that a more upright, intelligent, independent, and honourable body of men cannot be found in any part of the empire than is to be found in the county of Cumberland. Many of them are now present, and consequently to say more would savour of flattery, but to have said less would be an act of injustice, both to them and also to my own feelings, for I can assure you that I shall never forget their kindness. (*Applause.*) Therefore, I beg leave to propose the yeomanry of the county of Cumberland, coupling with them the name of my friend Mr. George Graham, of Prior Rigg, with three times three.

Mr. GEORGE GRAHAM returned thanks in his own behalf, and in the name of the yeomanry of Cumberland.

Mr. SCOTT ELLIOT proposed the health of "the young Laird" with three times three, and one cheer more.

Mr. FREDERICK GRAHAM returned thanks.

Sir JAMES GRAHAM then said,—I have already proposed to you the health of the tenantry on this estate, and on the out manors; you have also done me the kindness to drink my health, and thereby responded to an impression in my mind that on the whole, as a landlord, you were satisfied with my good conduct. It has not been my good fortune constantly to be resident upon my estate, and when absent, and indeed on all occasions, you must know how much depends upon the conduct of a steward, and I am now about to propose to you the health of one who has never failed to hold the balance steady; who has done his duty to me, while he on all occasions advised me to study your interests and comforts, and by so doing he has promoted my best interest and secured your esteem; I now, therefore, give you the health of Mr. Yule, the Secretary to this Society. (*Loud cheering, which burst out into a simultaneous three times three, and at the conclusion one hearty cheer more.*)

Mr. YULE said,—I really cannot express to you what I feel on this occasion. In the station which I have the honour to hold, I have always found it at the best way to promote the interests of my employer was to study your wishes and promote them to the utmost of my power. (*Loud cheers.*)

Sir JAMES GRAHAM said,—I have another debt of gratitude to pay, gentlemen, and I discharge it with the utmost pleasure. I have expressed my obligations to those who are now tenants upon the Netherby estate, but I am proud to see some present who were formerly tenants; who having left the estate, have taken this opportunity of coming amongst us, and showing the interest they take in whatever concerns their former occupations, and renewing their marks of friendly feeling. I am afraid that Mr. Andrew Lamb, of Liverpool, has been unexpectedly detained by illness, as he wrote to me a few days ago that he should certainly be here. But I am proud to see many here, whom I could formerly recognize as tenants, and then and now as friends; amongst them there is one still a neighbour, whose name I will associate with the toast, and I will give you the health of Mr. Teather, and all the former tenants of Netherby, with three times three.

Mr. TEATHER briefly returned thanks.

Mr. BAXTER then proposed the health of the Rev. William Graham, the rector of the two parishes, with three times three and one cheer more.

The Rev. W. GRAHAM said—Believe me, gentlemen, I want words to convey to you my feelings, not because I do not duly appreciate the handsome manner in which my health has been proposed; not because I do not properly estimate the acclamations with which you have greeted my name, coming as those plaudits did from so large an assembly, and that composed of men so respectable as I now see, but because my feelings overpower me. For you may easily imagine that it cannot fail of being most gratifying to me, and I can only regret that I am not more worthy of your approval. (*Loud cheering.*)

Sir JAMES GRAHAM then said—Gentlemen, we whose interests are so blended with agriculture, cannot at the same time be indifferent to the important departments of trade and commerce, more especially as respects the districts in our neighbourhood. I believe you all feel a deep interest in the growing prosperity of the trade and commerce of Carlisle, which cannot fail of imparting to us unmingled satisfaction. There is a gentleman now present a resident in the good old city, who has a peculiar claim on my attentions; I might with justice say an hereditary claim for he has been my faithful legal adviser; his father was the faithful and tried adviser of my father, I believe his grandfather of my grandfather; and I may safely say that a more honourable and excellent man does not exist. You all know him, and therefore to say more would be superfluous, and I will therefore give the health of my friend, Mr. Mounsey, and success to the trade and commerce of Carlisle, with three times three.

Mr. MOUNSEY said, on behalf of the trade and merchants of Carlisle, I am bound to return thanks to Sir James Graham, and also to you for expressing your wishes for their prosperity, though I am not immediately connected with them, as a body. Sir James Graham has alluded to the link which has subsisted between me and yourselves; for my part I can say that through the whole of my life I have been in the habit of meeting the tenants of Netherby, and that intercourse has been a source of unmixed satisfaction. (*Cheers.*)

Sir JAMES GRAHAM then said, having drank the health of the Duke of Buccleugh, and success to the agricultural society on the other side of the Border, I will now take the opportunity of proposing one whom I am proud to recognize as connected with the agriculture of this county, who has been my colleague, and who I am happy to recognize as my

neighbour and friend. I will give you the health of the Earl of Carlisle, and success to the Brampton Agricultural Society.

Mr. JOHN WRIGHT, of Oak Bank, proposed the health of Captain Charles Graham, with three times three, and one cheer more.

Captain GRAHAM returned thanks.

Mr. SCOTT ELLIOTT then proposed the health of Lady Catherine Graham, which was drank with the utmost enthusiasm.

Sir JAMES GRAHAM returned his hearty thanks on behalf of his revered and respected mother.

Mr. GRAHAM, of Cubby Hill, proposed the health of Major Graham, who in a neat address returned thanks.

Sir PULTENEY MALCOLM, after a warm eulogium on the sisters of Sir James Graham, proposed their healths, in whose name Sir James returned thanks, and said if they deserved the praise of Sir Pulteney, it might be attributed in no small degree to the excellent example of the neighbours among whom they had spent their earliest years.

The company continued assembled until about seven o'clock, when Sir James vacated the chair, attended by his most distinguished guests, and the company followed shortly afterwards.

The following is a list of the premiums adjudged by the gentlemen appointed to make the awards:—

1. To the best managed of any of the following farms, a silver tea pot of ten pounds value:—Guards, Rosetrees, Mastown, Oakbank, Beatenbush, Moat, Fauld and Browside, Hornickhill, Burnfoot, Lairdstown, Stagmire, Parcelstown, Randalinton, Bush-on-Lyne, Inch and Riddingshall, Guards-mill and Mill-hill, Longtown Brewery Farm, the Inn, and Stonehouse. Seven competitors. Prize awarded to Mr. John Wright, of Oakbank.

N. B.—The criterion of management chiefly to be attended to for 1835, will be the greatest breadth of well managed and manured turnip crop on the lighter soils; the greatest breadth of well manured thoroughly cleaned bare fallow on the strong lands, in proportion to the extent of the farm; the state of the farm-buildings water-courses, gates, and fences; and the greatest extent of bent, moor, moss, or waste land brought into aration or fit for the plough. The greatest extent of land on each farm, in proportion to the measurement, well and properly sown out, and pasture of the different ages stipulated in the respective leases, will also form a chief point in awarding this prize.

2.—To the best managed of any of the following farms, a silver tea pot of ten pounds value:—Cubby-hill, Redbank, Glendinningrigg, North Pedderhill, South Pedderhill, William and Georgetown, Oldhall, Nookfoot, Briscohill, Howend, Whitecloserigg, Oakshawhill, Milles, Cowrigg, Baileytown, Chapel-town, Lawshall, Little Randalinton, and Philips-town. Four competitors.—Prize given to Mr. John Johnston, of South Pedderhill.

N. B. the criterion of management chiefly to be attended to in 1835, will be the greatest breadth of well managed and manured turnip crop on light soils; the greatest breadth of well limed, and thoroughly cleaned summer fallow on strong soils: the greatest extent of old lea land limed on the face, to be eat in at least two years before breaking up; the greatest breadth of land well and properly laid out for pasture in proportion to the extent of the farm; and the situation of houses, gates, fences, and water courses.

3.—To the best managed of any of the following farms, cash four pounds:—Plump and Hagtown, Moss-side, Hilstown, Frankstown, Closegap, Liddle-

strength, Hightree, Bruntfauld, Baxtongill, Dikehead, Over Dikehead, Beyondwood, Forrest's Arthur's Cross, Sandgreen, Highplains, Charles-town, North Easton, Lamblin, Heatheryknowe, Carwinley Mill, Dashwellgreen, Lowplains, South Sealelands, North Sealelands, Upper Hallburn, Lower Hallburn, the Ladies' Seats, Moorstown, Daffyston-rigg, Glinger-burn, Redcleugh, Nether-Hirst, Corrie-lees, Burntinsbill, Petterscrook, Redburnside, Sealandburn, Becklees, Fineview, Plada, Caldwell-path, Creca, Bellfield, Jacksonrigg, Meadhope as let to the Globe Inn, Sandbed and Meadhope, Shadwellcrooks, Todhillriggs, Ninevah, Battiestown and Greenswang. Six competitors.—Prize given to Mr. Richmond Blaylock, of the Barn.

N. B.—The criterion of management chiefly to be attended to in 1835, will be the greatest extent of well managed and manured green crop, and clean of bare summer sallow properly manured, in proportion to the size and quality of the farm; the greatest extent of old lea land limed on the face, to be eat in at least two years before breaking up for Oats; the extent of pasture land, in proportion to the size of the farm; and the general state of houses, fences, gates, water-courses, and drains.

4.—To the best managed small possession or croft, the farmer of which may be occasionally employed off his farm—cash four pounds. Seven competitors.—Prize given to Mr. John Tinning, of Yules-croft.

N. B.—In deciding this prize, the state of the houses, gates, fences, drains, and water-courses was attended to, as well as the mode of cropping.

5.—To the best managed ditto ditto on which the farmer does not reside, under the same conditions as the last—cash three pounds. Four competitors.—Prize given to Mr. Wm. Tweddell, of Longtown.

6.—For the best executed draining by stone or tile laid on slates, the quantity of land laid dry and fit for aration to be compared with the extent of the farm without reference to the rent. Three competitors.

First prize—five pounds.—Obtained by Mr. Thos. Little, of Heatheryknowe.

Second prize—two pounds five shillings.—Obtained by Mr. Johnston, of Pedderhill.

7.—To the tenant who shall produce the best lot of two year old Galloway cattle, male or female, not less than five in number, bred on his farm, and *bonâ fide* his own property, the first choice of a Galloway bull calf. Eight competitors. Prize awarded to Mr. Johnston, of Pedderhill.

8.—To the tenant who shall produce the best lot of two year old cattle, male or female, not less than five in number, bred on his farm, and *bonâ fide* his property, the second choice of a Galloway bull calf from the Netherby stock. Six competitors.—Prize given to James Baxter, of Fauld.

9.—To the ditto ditto who shall produce the second best lot of five year old cattle under the same conditions as the last the third choice of a Galloway bull calf. Nine competitors.—Prize given to Mr. Johnston, of Pedderhill.

N. B.—The bull calves that may be selected by the successful candidates for prizes 7th, 8th, and 9th, are to be kept upon the estate of Netherby, to serve cows, for three successive seasons, that is to say for 1836, 1837, and 1838; or if the president or his agent thinks proper, the gainers of these prizes may be allowed to sell their bull calves to farmers upon the Estate of Netherby, who, however, must still keep the said bulls agreeable to these conditions, and on no account shall the said bulls be allowed to be sold off the Netherby estate, for the three years named.

10.—Pure bred Galloway cows belonging to the tenants of the Netherby estate, if approved of by the agent or under-steward, to be served free of expense for the ensuing season, by Sir James Graham's bulls.

11.—Mares belonging to the said tenants, if approved as in the last prize, to be served free of expense, by Sir James's Arab stallion, Sultan, for the ensuing year.

12.—To the best managed ancient meadow upon the estate, upon which either line, short-dung, or compost shall have been applied for the current crop, in proportion to the extent and capability of the farm—cash two pounds. Four competitors.—Prize awarded to Mr. John Birrell, of Rosetrees.

13.—To the best managed meadow formed from lands not originally meadow, and improved since the year 1834, under the same conditions as the last, two pounds. Three competitors.—Prize given to Mr. Gibbons, of Mossband.

14.—Among the best kept, neatest, and cleanest cottages and gardens upon the estate Lady Graham gives prizes to the amount of ten pounds in money and garden seeds, to be awarded according merit, by the judges of the Netherby Farmers' Society. 18 competitors.

First class—Mr. John Ferguson, of Hynemore.

Second class—Mr. John Jeffrey, of Beck.

Third class—Jane Irving, of Millhill, and 15 others.

Premiums offered by the Netherby Farmers' Society, to the Tenantry and Cottagers of the right hon. Sir J. R. G. Graham, Bart., M. P., independent of the Prizes offered by Sir James and Lady Graham. Crop and year, 1835:—

1.—To the best managed, manured, and cultivated turnip crop, upon the whole estate, the extent of the farm and nature of the soil being considered, three pounds. Nine competitors.—Prize given to William Birrell, of Rosetrees.

2.—To the best ditto ditto potato crop, on the same conditions, three pounds. Fifteen competitors.—Prize given to Messrs. Little, of Guards Mill.

N. B.—The successful candidates for Sir James's Prizes, Nos. 1 and 2, not to compete for these two last-mentioned Prizes.

3.—For the best bull, of the pure Galloway breed, *bonâ fide* the property of a Netherby farmer, and to serve cows upon the estate, until the 1st of September, 1836, at not more than 2s 6d each cow, but after receiving this Prize, the bull may be sold if he has already remained three years on the estate for the purpose of breeding, five pounds. Four competitors.—Prize given to Mr. Thomas Tweddell, Longtown.

4.—For the second best ditto ditto on the same conditions, the bull to be 2 years old off, two pounds. To Mr. R. Wilkin, Guards.

5.—For the best cow of the Galloway breed, *bonâ fide* the property of a member: the cow to be in milk at the time of showing, one pound. Seven competitors.—Prize given to Mr. Gibbons, Mossband.

6.—For the best Galloway heifer bred upon the estate, two years old past on the 1st of March, 1835, one pound. Four competitors.—Prize given to Mr. R. Gibbon, Mossband.

7.—To the best ditto ditto one year old, ten shillings. Four competitors.—Prize given to Mr. R. Lattimer, Hornickhill.

8.—To the best cart stallion, of the Pure Scotch breed, to serve in the district, and give every satisfaction during the season to the committee of Judges appointed by the Society, five pounds.—Mr. Pringle, Jerriestown, for the Horse, Clyde.

9.—To the best brood cart mare, of the pure Scotch breed, two pounds. Nine competitors.—Prize given to Mr. Sanders, of Riddings.

N. B.—This prize to be held by the Treasurer until the mare produce a foal, if she has not already produced, but she must be stinted.

10.—To the second best ditto ditto on the same conditions, one pound ten shillings.—Given to Mr. W. Graham, of Cubby Hill.

11.—To the best three years old cart horse, mare, or gelding, of the pure Scotch breed, bred on Netherby, two pounds. Two competitors.—Prize given to Mr. R. Wilkin, of Guards.

12.—To the second best ditto ditto, one pound.—Given to Mr. R. Latimer, of Hornickhill.

13.—To the best two years old horse, mare, or gelding, of the pure Scotch breed, two pounds. Seven competitors.—Prize given to Mr. R. Wilkin, Guards.

14.—To the best one year old ditto ditto, one pound. Five competitors.—Prize given to Mr. John Wilkin, of Mossband.

15.—To the best boar, two pounds. Two competitors.—Prize given to Mr. John Carruthers, of Whitesyke.

16.—To the second best ditto, one pound.—Given to the Messrs. Little, of Guards Mill.

17.—To the best sow, one pound. Four competitors.—Prize given to Messrs. Little of Guards Mill.

18.—To the man or woman servant in husbandry, for the longest term of service with one master but not less than seven years, one pound. Three competitors.—Given to Mary Scott, 14 years with Mr. Wilkin, of Bush.

19.—For the best pen of five yearling Cheviot widders.—Three competitors.—Prize given to Mr. Thomas Wilkin, of Bush.

20.—For the best ditto of five yearling half-bred widders, one pound. Four competitors.—Prize given to Mr. John Saunders, of Riddings.

**PRESERVATION OF APPLES.**—The following valuable observations, contained in a letter from N. Webster, Esq., have been published in "The Massachusetts Agricultural Repository."—"It is the practice of some persons to pick apples in October, and first spread them on a floor of an upper room. The practice is said to render apples more durable, by drying them. But I can affirm this to be a mistake. Apples, after remaining so long on the trees as safety from the frost will admit, should be taken directly from the trees to close casks, and kept as dry and cool as possible. If suffered to lie on the floor for weeks, they wither, and lose their flavour, without acquiring any additional durability. The best mode for preserving apples for spring use I have found to be the putting them in dry sand, and as soon as picked. For this purpose, I dry sand in the heat of the summer, and late in October, put down the apples in layers, with a covering of sand upon each layer. The singular advantages of this mode of treatment are these:—1. The sand keeps the apples from the air, which is essential to their preservation. 2. The sand checks the evaporation of the apples, thus preserving their full flavour; at the same time, any moisture yielded by the apples (and some there will be) is absorbed by the sand, so that the apples are kept dry, and all mustiness is prevented. My pippins, in May and June, are as fresh as when first picked, even the ends of the stems look as if just separated from the twig."

## BUCKS PLOUGHING MATCH AND DISTRIBUTION OF PREMIUMS TO AGRICULTURAL LABOURERS, AT BUCKINGHAM.

On Wednesday, September 23, the annual ploughing match of the Royal Bucks Agricultural Association was held at Buckingham. Fifteen ploughs started at ten o'clock punctually, and the work was finished by one o'clock. There was a large concourse of people in the field. Afterwards a meeting was held at the Cobham Arms, at which several members were proposed and admitted, and some other business was transacted; the party then proceeded to the hall, in which

### THE DINNER

was provided. A very large company (nearly 200) assembled to partake of the excellent viands set before them in profusion.

Amongst the company present were—the Marquis of Chandos, President, in the chair; Lord Nugent; Sir W. L. Young, Bart., M.P.; Col. Hanmer, M.P.; G. Raymond Barker, Esq.; W. Bailey, Esq.; W. Medley, Esq.; Rev. Messrs. Wright, Young, Meredith, Perkins, &c.; Messrs. Montgomery, Martin, Brown, Howard, Gray, &c. &c., and a great number of the most respectable and substantial farmers of the district. Sir T. F. Freemantle, M.P., and Sir H. Verney, M.P., as Vice-Presidents of the association, presided respectively at the two side tables.

After the removal of the cloth, the usual toasts having been given from the chair,

The Marquis of Chandos said,—Gentlemen, we are assembled here to-day to carry into effect the objects of this the Royal Bucks Agricultural Association. It has now been established upwards of three years, and is, I rejoice to add, highly prosperous and beneficial. (*Cheers.*) It has proceeded on purely agricultural principles, without any regard to political feelings or party politics. (*Cheers.*) It is true that attempts have been made to cast such motives in our proceedings, but I now only notice those aspersions, to state openly and distinctly, that in this association we know of no party but the British farmer. (*Great applause.*) I am proud to fill the situation in which I this day stand before you; to be at the head of this table as president to the association, surrounded, as I am, by so many respectable and worthy farmers, and to have the satisfaction, in their presence, of distributing the premiums which this association has awarded to the honest, industrious, and faithful labourers and servants. (*Cheers.*) I am convinced that great benefits have already resulted from these distributions: I am convinced that yet greater benefits are to follow. It is delightful to have to bestow fitting remuneration upon deserving objects, they look to you with pride and respect, gratified at the remuneration which you give; and we have the satisfaction of giving to them the prizes which not only reward their good behaviour, but stimulate others to industry and fidelity. (*Great cheering.*) When I contemplate the condition of the peasant, so debased and depraved as it has been but in too many cases, I feel assured that these would not have occurred, if, at an earlier period, such an association as this had been established. But this association once formed, I knew from the first that it would link all the county in one general interest, and unite them, free from all party motive, in the great cause of agriculture. (*Cheers.*) We shall, by this, rescue the labourer from the beer-shops, which are his bane, and aid the humbler classes in their efforts to

live free from parochial aid, and to bring up their families to honest labour and independence. (*Great cheering.*) They will now know that by honest courses and industrious conduct, they will be remunerated and encouraged, and thus they will see that to be idle and disorderly will but injure their condition, whilst good conduct, fidelity, and honest service, will receive the praise and the premiums of this association. (*Cheers.*) I am glad to hear that the prizes for the ploughing have been earned in a skilful and workmanlike manner, and I am proud to see so numerous an assemblage here to-day to witness the distribution of those rewards which have been so properly earned. I trust at another meeting to see our friends from the northern districts in greater numbers, for I wish the benefit of this association to be most widely extended, as the association looks for support to the residents of the county in every part. It is, I confess, hard upon us, that, of all the occupations of the state, agriculture alone is depressed. (*Hear, hear,*) Yes, the staple of the land is suffering, while all other branches of industry increase and prosper. It is not, believe me, of their prosperity that I complain, but it is of our adversity; and from this depression we must endeavour to rid ourselves, if we would not sink under it. (*Cheers.*) The day is not far off when my prediction will be fulfilled, that we shall again flourish, if the farmers will be up and stirring in their own cause, and most earnestly do I appeal to them to rouse without delay. Agriculture must be relieved; with every good wish to manufacture, with every desire to see it flourish, and ready to aid its prosperity in any way—still I repeat that agriculture must not, shall not longer be behind in the race of national prosperity. (*Immense cheering.*) All trade is in activity, but we find the national and natural source of prosperity declining and decaying, and agriculture is hanging on the rear. The farmers must not lose a moment in rescuing their cause from the distress that nigh threatens to overwhelm it. When I appeal to you to be active and immediate in your efforts, I know that I do not appeal in vain. I wish my words to go forth through the county and through the land, and I wish they may rouse the farmers to protect themselves. (*Cheers.*) And then I hope my words may prove true, and that better times may again encourage and repay you. Support yourselves and one another, and success will crown your struggle. I have often before told you that I am ever at your service when I can be of use, and I will again say, that so long as I breathe, you shall never want my exertions and my advocacy whenever and wherever you may think they can conduce to your advantage. The noble lord concluded amidst immense and protracted cheering, by toasting success to the Royal Bucks Agricultural Association, which was drunk with three times three, amidst the loudest applause.

The distribution of prizes followed. Lord Chandos delivered each premium to the successful candidate, addressing them singly in the most feeling and appropriate terms.

## DISTRIBUTION OF PRIZES.

Agricultural labourers of Buckinghamshire who have brought up the largest families by their own earnings, without parochial relief:—

## FIRST PRIZE.

| Name.       | Where resident. | Children. | No. of Brought up. | £ | s. | d. |
|-------------|-----------------|-----------|--------------------|---|----|----|
| W. Burnell. | Quainton.       | 12.       | 11.                | 4 | 0  | 0  |
| C. Floyd.   | Chenies.        | 11.       | 9.                 | 4 | 0  | 0  |

## SECOND PRIZE.

|           |                |    |    |   |   |   |
|-----------|----------------|----|----|---|---|---|
| T. Keene. | Aston Clinton. | 7. | 7. | 3 | 0 | 0 |
| T. Beech. | Fawley.        | 7. | 7. | 3 | 0 | 0 |

## THIRD PRIZE.

|             |              |    |    |   |   |   |
|-------------|--------------|----|----|---|---|---|
| H. Jackson. | Ivinghoe.    | 9. | 4. | 2 | 0 | 0 |
| T. Parker.  | Cheddington. | 7. | 4. | 2 | 0 | 0 |

## FOURTH CLASS.

|            |            |    |    |   |   |   |
|------------|------------|----|----|---|---|---|
| J. Elliot. | Hambleton. | 6. | 5. | 1 | 0 | 0 |
|------------|------------|----|----|---|---|---|

To single Male hired Servants in Husbandry, who have lived the longest period, not less than five years, in the houses of their employers, being Members of this Association.

## Length of service.

|                 |            |                       |    |            |
|-----------------|------------|-----------------------|----|------------|
| Wm. Robertson.. | Wingrove.. | 7 $\frac{3}{4}$ yrs.. | £2 | 1st prize. |
| Wm. Deane.....  | Hambledon. | 5 yrs..               | 2  | ditto.     |

To the best Female hired Servants in Husbandry, who have lived the longest period, not less than three years, in the houses of their employers, being Members of this Association.

## Length of service.

|                   |              |         |    |            |
|-------------------|--------------|---------|----|------------|
| Susan Sharpe....  | Pitstone.... | 4 yrs.. | £2 | 1st prize. |
| Eliz. Saunders... | Quainton...  | 3 yrs.. | 2  | ditto.     |

To the Dairy Woman who has lived the Longest Period in the service of the same Individual, a Member of the Association, not less than Five Years, the Dairy consisting of not less than Thirty Cows.

## Length of service.

|                |            |         |          |    |   |   |
|----------------|------------|---------|----------|----|---|---|
| Letitia Brill. | Waddesden. | 7½ yrs. | 50 cows. | £3 | 0 | 0 |
|----------------|------------|---------|----------|----|---|---|

To Shepherds of Members of this Association who shall produce a Certificate from their Masters of having reared, in the preceding Lambing Season, the greatest number of Lambs of not less than 100 Ewes.

|              | No.<br>of Lambs. | No.<br>of Ewes | Prize. |
|--------------|------------------|----------------|--------|
| n...204....  | 140...           | £3 1st         |        |
| don, 167.... | 116...           | 3 do.          |        |
| ...266....   | 200...           | 2 2nd          |        |
| n...247....  | 194...           | 2 do.          |        |
| ...125....   | 110...           | 1 3rd          |        |
| ...116....   | 108...           | 1 do.          |        |

To Labourers in Husbandry who have been employed without intermission the longest period on the same Farm, or with the same Masters, being Members of this Association, (cases of illness excepted.)

## Years.

|              |                |     |    |            |
|--------------|----------------|-----|----|------------|
| R. Marlow.   | Biddlesden.    | 60. | £3 | 1st prize. |
| T. Wilmer.   | Fleet Marsten. | 55. | 3  | ditto.     |
| W. Shepherd. | Twylford.      | 42. | 2  | 2nd prize  |
| J. Causley.  | Winchendon.    | 50. | 2  | ditto.     |
| J. Allen.    | Foxcote.       | 35. | 1  | 3rd prize. |
| W. Spires.   | Thornboro'.    | 34. | 1  | ditto.     |

To the Ploughmen who can plough half an acre in the best manner, in the space of time not exceeding four hours.

| Masters.        | Men.         | Prize.             |
|-----------------|--------------|--------------------|
| Jno. Brickwell. | Thos. Huges. | No driver. £3 1st  |
| Jno. Roper.     | W. Scott.    | A driver. 2nd      |
| Thos. Bartlett. | John Scott.  | Thos. Scott. 1 3rd |

W. Scott, boy driver to the second prize, 7s. 6d.

To Agricultural Labourers, claimants for the Society's Coat and Buttons, for general good conduct, not less than ten years.

|                |               |           |
|----------------|---------------|-----------|
| W. Edwards.    | Cheddington.  | 46 years. |
| T. Rowe.       | Leckhamstead. | 40 years. |
| R. Colson.     | Leckhamstead. | 40 years. |
| W. Atkins.     | Hambleton.    | 26 years. |
| A. S. Emerton. | Leckhamstead. | 35 years. |
| J. Smith.      | Chenies.      | 26 years. |
| D. Tompkins.   | Pitstone.     | 26 years. |

The following were the candidates for the ploughing match :—

| Proprietors.           | Residence.    | Ploughmen and Boys.    |
|------------------------|---------------|------------------------|
| T. Bartlett, Esq...    | Buckingham    | J. Scott, T. Scott     |
| Rev. J. L. Long..      | do.           | J. Hobbs, G. King      |
| Mr. J. Sear.....       | Bourton       | T. Warner, J. Adkins   |
| Rev. Mr. Young..       | Quainton      | T. Hedges, J. Hedges   |
| G. Parrot, Esq..       | Castle Farm   | J. Hicks, W. Giles     |
| Mr. J. Hurst, ...      | Leckhampstead | S. Warner, W. Newman   |
| Mr. J. Brickwell,      | do.           | T. Hodges              |
| Mr. J. Hurst ....      | do.           | H. Smith, H. Whitehead |
| Mr. E. Walker...       | Desborough    | J. Gibbard             |
| Mr. V. Brickwell ..... |               | W. Isam                |
| Mr. C. Brickwell ..... |               | W. Fenzmore            |
| Mr. Roper .....        | Foscot        | W. Scott, A. Druce     |
| Mr. Swain .....        | Buckingham    | J. French, T. Rawlings |
| Mr. Fountain ....      | Thornborough  | J. Cranwell, T. Capel  |

LORD CHANDOS observed that he had the utmost delight in witnessing the scene that had just passed before them. He rejoiced to see so many honest and faithful servants so justly praised and so properly rewarded. They evidently were not blind to their own position, nor insensible to the kindness displayed towards them. He trusted that their example would incite their fellow labourers, and that each year the sight would be more gratifying. For himself, it was a most pleasing task to distribute these rewards, and he then proposed amidst universal cheering, "The Health of the Winners of the prizes of the day and their Families," with three times three and great applause.

SIR HARRY VERNEY.—I have permission to propose a toast, and it is one which I know you will all drink with pleasure and enthusiasm. I will appeal to you whether this association can be better headed than by the noble marquis, (*Shouts of applause*) Could the prizes have been distributed with better recommendation and advice, or with more suitable language and manner than that of the noble president? The principles which he recommended to those humble but worthy persons, are those which should govern us as public and private men. (*Great applause.*) I beg to express my most decided and warmest approbation of this association and its proceedings, and rejoice to find that such are the objects of the Royal Bucks Agricultural Association. In all times, and especially in these times, it is well for landlord, tenant, and labourer, to unite with one common feeling in the common cause. I will now give you the health of our worthy President, the Marquis of Chandos.

MARQUIS OF CHANDOS.—I assure you that I experience the greatest difficulty in finding language in which I can adequately convey to you my feelings for the kindness you so constantly and generously evince to me, or to my excellent and worthy friend, Sir Harry Verney, for the kind and hearty manner in which he gave my health, and I rejoice to hear that he will bear testimony with me to the principles which actuate this association; and that the country will know, from such a witness also, that this association has for its object only the benefit of the agricultural classes, and especially the encouragement of the agricultural labourer. I am confident

that it is for the benefit of the landlord that he should mix as often as possible with his tenantry to know their actual condition, and to understand their views and wishes; I am confident that the more frequently the clergy mix with one another and their flocks the better for both; and I am confident the more frequently the gentry and landholders of the county meet together, without reference to party politics, the better it is for them and all around them. I have heard with delight the testimony of Sir H. Verney, and with unmixed pleasure I meet at this festive board so many kind and well known friends. It has ever been my object, and will ever continue to be so, to associate as much as possible with my neighbours, and in every way in my power to aid them. I desire to live amongst them as a country gentleman, solely depending on the land for my support, and wishing to drive from my memory all party feeling and all political prejudices. Yes! I would drive from my recollection those party feuds which have sundered relatives (*here the noble lord was interrupted by the loud cheers that rung from all corners of the hall*), divided friends, and impeded many of the best and most admirable intentions of the heart. Yet I will say, that party feeling shall never distract me from my purpose, nor divert me from my object—the benefit of the English farmer. By him I have been honoured with friendship, confidence, and support for many a long year, and I hope I may say with honest pride, that I have never abused that friendship—never disgraced that confidence. I have endeavoured to be of service to those around me to the utmost of my means, regretting only that they are not as abundant as my good wishes are towards you. My object in accepting the honourable office of President, has been to do all in my power to serve you; and if I have not succeeded I regret it—but do not blame me. In every capacity I do my best to serve you, and if I am not victorious on every question, yet I am not the less anxious again to attempt whatever may be considered serviceable to your interests and welfare. *But you must not sleep on your posts; you have much to do, and must instantly begin to act, and continue in one straightforward and constant course.* It is not by restless agitation that you may hope to prosper, but by laying your wishes at the foot of the throne. State your distress, and petition the House of Lords and the House of Commons to listen to, and redress, your grievances. Do not agitate vexatiously, but follow my advice and act constitutionally. These are times of great distress, and no man can be blind to the fact. You who visit the markets know their depression. I rejoice at the prosperity of the manufacturing districts; I wish, and am glad, to see them thriving, but I want to see agriculture placed in a similar condition. I desire to see the farmer restored to that position in which he was placed by the Almighty, and in which he has an undoubted right to continue. For myself, in my course I may have met with much obloquy for my support of your cause; but I have the satisfaction of knowing that I am honest and consistent in my purpose. As a body, we have been styled monopolists, yet they who made that attack may find that the charge of monopoly may be returned upon themselves with much greater justice. I am for living and letting live, being, as I am, one of you, and dependent on your art and your cultivation. In my family have we had property left to us; so have many of you; and each of us is naturally desirous of retaining what has descended to us. Yet many farmers have been compelled to leave their homes, whom, last year, I saw there in comfort, whose hospitality I enjoyed;

and whose welcome I received. Now where are they? Expatriated to Canada, or some other foreign land, and seeking a subsistence and a grave in a strange and foreign land. No man who knows the value of home and his own fireside will, I am sure, hesitate to answer the call made on him to come forward and exert himself to support the failing plough. For myself, I am ready to sink or swim with you, but I hope I may be able to point out to you a haven, into which, at length, you may safely and prosperously steer your vessel uninjured by agitation and contrary gales. Whenever I see so many whose kindness has always befriended me, I assure you that I am most deeply sensible of their favour towards me, and desirous to express those feelings. I assure you that there is no moment of my life in which I do not turn in my mind how I may aid you; and my constant prayer is for your happiness and prosperity. I hope I may continue thus to meet you through a length of years. Let us at once begin in the good course necessary to achieve our ends, but let it still be said of us that we have never entertained any feelings but those of patriotism and loyalty, and that we have never committed one unconstitutional act.

Sir W. L. YOUNG then proposed the health of Lord Nugent and congratulations on his return to his native land. (*Great cheering.*)

LORD NUGENT.—If I say that I find great difficulty in acknowledging the honour you have just paid me, I do not say so according to the common cant which is so often used on such occasions. I do feel a real difficulty in expressing my sentiments adequately after my lengthened absence from my native country, and to be thus received in a place consecrated to me by many and dear remembrances. (*Great applause.*) It is with sincere joy that I have hailed the assurance of my noble and dear relative in the chair, it is with the deepest satisfaction I hail his declaration, that all political and party feeling are here to be wholly laid aside. (*Cheers.*) No man has more ably and consistently adhered to opinions than he, but as here we have assembled on an occasion of great usefulness, I rejoice that we are exempt from political taint. Far be it from me not to give the highest credit to a man, who, giving his best power to a party, acts with them consistently; but here, we are surrounded by the symbols of peace, the monuments of rural industry—here we are met to spread abroad the principles which must be beneficial to our country, and to mingle with these, even party motives or party feelings would be a political taint. (*Loud cheers.*) To do so would be what a political writer has called “the madness of the many for the gain of the few.” I meet the pledge as it was given, and I am sure my noble relative never made a pledge which before God and man he was not ready to give effect to. (*Cheers.*) I meet the pledge with readiness, and as far as my humble example may go I give it, hoping that whenever the time may come I may be admitted one of this useful and beneficial association. (*Loud applause.*) You have conferred to-day benefits on your county and on yourselves, and what Englishman can think otherwise after the scene of to-day. The noble ambition of the peasant has been realized, he has been raised in society and in his own estimation. Your approbation has been well bestowed, because well deserved by those faithful servants and honest labourers. (*Cheers.*) Amongst these there are men who had passed upwards of half a century each in the service of one master, and half of what a century? A period teeming with sacrifices of every kind, from the highest to the lowest; of public sacrifice, and private

rendering up of privileges. The poet has mentioned the “short and simple annals of the poor,” but the annals of our poor, in this time, have been, not “short and simple,” but complicated and suffering. (*Cheers.*) But I look to better times which cannot be better anticipated than by meetings like this; and may you always have such objects in view is my ardent and constant wish—nor is that wish less ardent or constant that at these meetings you may banish from your own mind, and from that of each other, every adverse feeling on which you may have the misfortune to differ.

LORD NUGENT again repeated his thanks, and sat down amidst universal cheering.

“Thanks to the Stewards.”

Mr. Brickwell returned thanks.

Song—*Here's a health to the King, God bless him.*—

Mr. Barton.

The health of the Treasurer, Mr. Horwood. (*Cheers.*)

Mr. HORWOOD returned thanks, and observed that in the objects of this association there could have been no mistake. As cultivating the good feeling of the peasantry, we were but making fast the roots of the British oak, and thus strengthening the branches. Two of the upper branches of that tree had declared their views of the association, and he was sure that Buckinghamshire would be subject to no reproach for the establishment of the Agricultural Association. (*Cheers.*)

The Secretary, Mr. Joseph Howard, whose attention to the interests of the association was deserving of the best thanks. (*Cheers.*)

Mr. HOWARD returned thanks, and stated that he had received letters of the associations all over the kingdom, sending their best wishes, and expressing a desire to be in communication with this association. He trusted that the association would make a long pull, a strong pull, and a pull altogether, and then we might hope to see agriculture again flourishing. (*Loud applause.*)

Song—*The Overseer.*

“Health of the Judges of the Ploughing.”

Mr. R. PAXTON returned thanks.

LORD CHANDOS then said that there were several strangers in the room, one of whom had generously presented 5l to the association, Mr. Montgomery Martin. (*Cheers.*) He was happy to say that he had also other donations to give from friends whose names he was not at liberty then to name, amounting to nearly 100l. (*Loud cheering.*) This would show that they had active friends and well wishers. He proposed the health of Mr. M. Martin, and the strangers present. (*Cheers.*)

Mr. MONTGOMERY MARTIN returned thanks.

Mr. MARTIN then proposed the health of a warm friend to the farmer, W. Medley, Esq. (*Cheers.*)

Mr. MEDLEY was much indebted for the kind manner in which his health had been received. He was no new comer amongst them, but had been in Bucks for these 20 years, but never desired to take an active part amongst them until in a time of depression, when believing that he could serve the farmers he came forward to lend his assistance. (*Cheers.*) There was but one mode by which they were to be extricated from their present difficulties, and that was no out-of-the-way new-fangled mode—it was by returning to the old silver standard of the country; and that would ensure better prices and better wages. (*Hear.*) He had been delighted at the display of the afternoon. It was highly gratifying and delightful to see Lord Chandos and Lord Nugent sitting together at this board (*great cheering*), and he hailed it as an omen of the return of

peace and prosperity to the county. He hoped that political differences would cease. He, himself, disclaimed all politics, and reflected only with joy on the sight of that day; and a prouder sight he had never contemplated. He trusted to see better days for the farmer, and was assured that the return to the silver standard was the only means of securing the return of prosperity to the farmer, which no man desired more ardently to see than himself. (*Cheers.*)

Mr. COWLEY, (of Winslow), in an energetic speech, proposed the health of Colonel Hanmer. (*Cheers.*)

Colonel HANMER returned thanks for the cordial reception given to him. He should ever remember with pleasure that he was the humble individual who proposed the resolution to establish this association, which so widely and efficaciously extended its benefits. He believed that it was entirely through this association that the exports of corn from the Canadas and the Channel Islands had been taken up by government. The poor laws were coming into full operation, and the labourer was now dependant solely on his own resources. He trusted it would work well, and then the purposes of this association would be aided, and its intentions rendered more generally useful. (*Cheers.*)

Lord CHANDOS then proposed the health of a warm friend to agriculture, G. S. Harcourt, Esq., the late High Sheriff, and the Vice President of the Royal South Bucks Agricultural Association, at which he presided last year. He was so great a friend to agriculture, that he had established a ploughing match on his own estate at Ankerwyke. Unfortunately that took place to-day, which had been so arranged before Mr. Harcourt was aware of the annual meeting here, or he would have been present at Buckingham. (*Great applause.*)

Lord CHANDOS next proposed the Press of the county, and the health of Mr. Ryde and Mr. Mason, editors of the two county papers. (*Cheers.*)

Mr. RYDE returned thanks for the Bucks Herald, and was received with the usual kindness of the Buckinghamshire yeomen.

Mr. Mason, for the Bucks Gazette, returned his thanks. He had been called the elder brother by Mr. Ryde, but he only had the younger brother's portion. I have been (continued Mr. M.) nearly two years in the county, and I entered it under peculiar disadvantages, unknown, unnoticed, and unfriended. If after the probation of two years my principles are not known, I must despair of making them understood. Let me say once for all, that whilst I shall ever continue to maintain and exercise the liberty of the press, I will never allow of its licentiousness. (*Great applause.*) If by so doing I have the approval of honourable men, I am amply rewarded. *Agriculture is of no politics.* (*Cheers.*) *It is neither Toryism, Whiggism, nor Radicalism. It is the source of all our prosperity, and it yields to us the staff of life.* The press is liable to misrepresentation, but if I deviate from fact, or misinterpret truth, I only desire to be convinced of my error, and I will remedy it by all means in my power. (*Cheers.*) That man is a coward who will not acknowledge a fault or explain a misunderstanding.

Other toasts were given and drank with hilarity, and Lord Chandos did not quit the chair until ten o'clock, when a great number of the party still remained and continued their merriment until a late hour.

THE PROGRESS OF AGRICULTURAL IMPROVEMENT.—It was said of Parry's condensed soup, that a man might carry the materials of his dinner in his

waistcoat pocket; and it is equally true that within the boards of an ordinary cart a farm servant may transport up the steepest slopes, manure enough to cover an acre of land. When bone dust was first introduced into Dumfriesshire, the calculation was that 32 bushels per acre served every purpose, and should not be exceeded under ordinary circumstances; but the land once gone over with bones, the manure is found to be of so abiding a nature that the quantity is now reduced to 20, 22, or 24 bushels. In some parts of England we have heard of a still smaller quantity, say 14 or 16; but as our farmers are not quite so experienced, they think it safest to adhere to a fair medium. Originally 32 bushels of bones were considered equal to 20 cubical yards or heaped carts of stable dung—a quantity which, perhaps 40 stout horses (with scatterers to each) could hardly have conveyed up a steep hill-side. To incur so much expense and exertion was entirely out of the question: and hence hill-tops, which now bear capital crops of corn, were left uncultivated as a matter of necessity, and in the absence of fructifying applications of every kind yielded a very poor return even as pasture land. In the case of one farm with which we are acquainted, a precipitous and rather extensive hill, which could not be manured on the common plan, excepting at a most exorbitant price, has been boned with ease for several years, and in that way rendered as fertile as the valley below, although the difference of rent is as 1 to 8 in favour of the high and against the low ground. This farm is, perhaps, peculiarly situated; but similar results on a smaller scale, may be witnessed in various parts of Scotland; and to speak within bounds, there are *upland farmers* who will make little fortunes during the currency of their leases, every shilling of which would have remained untold, but for the introduction of the new manure. It has sometimes been said, that from the multiplication and increased speed of our coaches, added to the facilities we derive from steam by land and water, distance has been abridged, although not geographically, and places most distant brought into closer communion; and on the same principle it may be said that bone manure, in leaving unaltered the height of our hills, has placed them on a level, in point of fertility, with our most sheltered valleys. In late years there may be some difference as regards climate and the maturity of the pickle; but when the season is early, there is none whatever.—*Dumfries Courier.*

ADULTERATED FLOUR.—Lime constitutes a large portion of the chymical components of pure wheat. To detect lime put into flour, by the hand of man, it is not sufficient that chymical analysis of the suspected flour should demonstrate lime, for a considerable quantity of lime is sure to be found in it; the proof of the adulteration would be better obtained by placing a portion of the flour in water, and examining the sediment; for, if the lime be placed there by the hand of man, it will precipitate without any chymical agent; but if chymically placed there by the hand of nature, it will not precipitate without a re-agent.

LOW PRICE OF WHEAT.—The present very low price of Wheat has induced a gentleman of the neighbourhood (who has the averages for the last 734 years by him) to refer to the prices of a few centuries ago, and it appears that

| By the last week's return of Devises market it only averaged ..... | 17s 4d  |

Being the exact average of the year 1799, and lower than any year since.—*Devises Gazette.*

## MANCHESTER AGRICULTURAL SOCIETY.

The annual exhibition of the Manchester Agricultural Society took place on Tuesday, Sept. 29, in the police-yard, Clarence-street. The show of cattle upon the whole seemed to us somewhat inferior to those of former years, a fact which might be to some extent accounted for by the occurrence of the Liverpool exhibition within two days afterwards. There was certainly a large shew of bulls, some of which were very fine animals, and especially one of which was decided by the judges to be too old for the prize for which it was competing. Some of the milch cows too were very fine; but the feeding cows were rather indifferent. The horses, too, appeared to us generally very poor. The shew of pigs was considerable, and comprehended some very fine animals; amongst them was a boar from China, which, if it did not command much admiration, at all events excited considerable curiosity from the singularity of its appearance. For a more general view of the merits of the animals exhibited, we must refer our readers to the speech delivered at the dinner by Mr. Hillyard, one of the judges.

### THE DINNER.

At half-past four o'clock about 150 members of the society and others sat down to an excellent dinner, in the large room at Hayward's Hotel, Bridge-street. Wilbraham Egerton, Esq., president of the society, was in the chair; on his right were Lord De Tabley, William Tatton Egerton, Esq., M. P., Peter Ainsworth, Esq., M. P., the Rev. C. K. Prescott, rector of Stockport, John More, Esq., of Sale, Charles Hindly, Esq., M. P., C. J. S. Walker, Esq., and other gentlemen; on his left, Egerton Leigh, Esq., of High Leigh, Mark Philips, Esq., M. P., H. Handley, Esq., M. P. (Lincolnshire), E. J. Stanley, Esq., M. P., of Alderley Park, Cheshire, Thomas Joseph Trafford, Esq., of Trafford, George William Wood, Esq., and other gentlemen.—The vice-president was Robert Garnett, Esq.—The cloth being drawn, the following toasts were given in succession from the chair.—The King, the Queen, and the Royal Family; Lord Hill and the Army; the Navy. The secretary Mr. Albinus Martin, then read the lists of premiums and other prizes adjudged that day. The next toast was "Success to the Manchester Agricultural Society," after which the Vice-President, in proposing the health of the President, said that he knew no individual better deserving of any attention they could pay him. Taken either in his public character, or as a landlord, or as a private individual he was well known, and as highly respected, and many of his tenants who were present, could well appreciate his private virtues. He hoped that Mr. Egerton would live long to preside over the meetings of this society.—Drunk with three times three, and one cheer more. In acknowledging the toast, the president expressed his gratification that the attendance of late years had been much more numerous, and that the shows had been much better than formerly. He took not the credit of this to himself, but ascribed it wholly to the committee, who had exerted themselves with such success in promoting and fostering the progress of the society. To see around him both the agricultural and commercial interests of this great community drawing hand in hand to add fresh impulse to the industry and wealth of this country was indeed a great pleasure. With such united support he felt assured the society must prosper; and if, as an humble individual, he could render it any service, he should ever be ready and

glad to do so.—He then gave the health of the Vice-president.

Mr. R. GARNETT as the only vice-president in the room, acknowledged the toast, and expressed his own anxious wishes for the prosperity of the society. It was the first time he had been present on these occasions, but he was well aware of the importance of such institutions to the country. He was no agriculturist; he had been during the greater part of his life a merchant connected with foreign commerce; it had been his fortune to visit various countries on the continent, but he had seen none to compare with Old England, particularly as to agriculture. He wished to see that pre-eminence maintained, and no means were more likely to conduce to such an end, than such societies as this, seated as it was too, in the very metropolis of the manufacturing wealth of the country. It was delightful to see interests like those of agriculture and manufactures, as nearly allied as those of man and wife, each sharing the other's prosperity or depression, thus mutually supporting and encouraging each other. He thought that this society had not been sufficiently brought before the notice of gentlemen, connected with the commerce and manufactures of the town; if it were more fully known, he did not doubt that large accessions might be made to its members. He should be ready to do what he could in this way: it only needed a little exertion to effect this object, and he was sure that in promoting the success of this society they would be conferring a benefit on the country at large.—(Cheers.) John Moore, Esq., then read the report of the committee, which related to the pecuniary affairs of the society.

The CHAIRMAN then gave the health of "the Judges," to whom the society was so much indebted.

CLARKE HILLYARD, Esq., president of the Northamptonshire grazing society, after returning thanks for himself and coadjutors, said that the office of judge was no very desirable one; for parties not gaining prizes were apt to go away dissatisfied, thinking their animals the best. However, he and his colleagues had done their duty conscientiously. If they had erred it could be only in judgment. It was impossible for them to be guilty of partiality, for they knew not in any one instance the owner of any animal in the yard. He had last year alluded to the sheep, not exactly finding fault, but saying that he came from a country where there were much better. He believed so when he said so; but he did not feel now that he stood upon the same firm ground. He did not know whether in this neighbourhood they were not breeding sheep more useful here, than would be the fat Leicestershire mutton, which he now believed would not suit manufacturers and people cooped up in factories, who had not the keen stomachs of the agricultural labourers. He therefore recommended the breeders in this neighbourhood to pursue the same course they had kept hitherto. He would say that in his opinion the sheep were excessively improved since last year. They were better calculated for use; and the best sheep was that which would produce the greatest quantity of mutton per acre, and which was easiest of sale. He had looked into the market here, and for his own table, he would rather be supplied from this market than from that of Northampton. With respect to the beasts, he regretted exceedingly that for the liberal prize of 20*l.* given by the society there should be only one ox shown; and he suggested that to divide the premium into two prizes of 12*l.* and 8*l.*, would induce a better show. The ox shown was a good one, but not without faults. He wished the owner joy, and hoped he would bring a better next year. The cows were

very good. They united every thing that could be wished for,—a disposition to give milk abundantly, and when no longer milch cows they were of nature to fatten well. The heifers were generally very good animals indeed. He could point out some of them in which could be seen what the shape and make of an animal ought to be; but there were other animals in the yard that could be brought there for no other purpose than to show what an animal ought not to be.—There was a very good collection of bulls, and some of them were very good animals. In the first class the judges fixed upon a very good animal, but it was not the only good animal of that class in the yard. In the next class the same was the case. Indeed all the bulls did credit to the county, and he thought it would be found that the breed of cattle in this county would be very much improved. He was much gratified with the pigs. He could not say more in a few words than by declaring that the worst pig shown here would have gained the first prize at the Northampton show. Last year one of the boars in the yard here knocked him down. He thought he espied his old acquaintance again this year, and though he did not know what the animal thought of him, he thought the pig a monstrous great boar (*bore*), and kept accordingly at a respectful distance. The horses did not come under the inspection of himself and coadjutors, and therefore he would not advert to them, but conclude by cordially thanking the company for their kindness and drinking all their healths.

JOHN WEBB, Esq., of Barton Park, near Derby, another of the judges, also acknowledged the toast, and suggested that in future the animals should be brought into the show yard at noon the day before the public show, that the judges might be able to make a more deliberate and careful decision than they were now able to do. What he recommended was the practice at Smithfield and in other agricultural fairs.

JOHN FORMBY, Esq., of Everton, the other judge, entered into a series of observations on the present condition of farmers. The first class, those whom Lord Stanley had designated as farmers who were their own labourers, were at present the most prosperous. The second class, whose time was chiefly occupied in overlooking their own labourers, such as tenants of farms, found it very hard work to make all ends meet.—(*Hear.*) The times would hardly afford that a man should have land to such an extent as to be able to devote his whole time to overlooking his labourers. As to gentlemen farmers, he had almost said it was impossible for them to make any money. If they were content to farm for amusement and to bear the loss, well and good; they were of great benefit to society, for they had time to read and make experiments and thus give to others the benefits of their research and experience. Upon a moderate calculation the farmer who was his own labourer saved one-third of the value of the whole produce annually, which was equal to about a rent; and it was calculated that a man ought now to make three rents. The conclusion he drew from these facts was that it would be advisable where it was practicable to divide large farms into small ones; and this important consideration he wished to press upon the attention of the landowners present.

MR. HILLYARD said that perhaps few people had made more calculations and devoted more time to this subject than himself; and he was convinced that a man could not live on three rents; he must have four. He explained that he referred to farms, principally ploughing but part grazing.

MR. DIXON, of Athershaw, near Oldham, one of the inspectors of the age of stock, asked, if large farms

were to be divided into small ones, where would be the men of capital, reading and intelligence? On the contrary, his opinion was that if farms were made sufficiently large to require and induce the introduction of persons of intelligence and capital, agriculture would be much more improved, than by making large farms into small ones. (*Cheers*).

The CHAIRMAN next gave "the Committee," to whose assistance the society was so much indebted for the time and trouble they had taken in bringing the affairs of the society to their present more flourishing condition.

[A complaint was made by the owner of some stock shown in the morning that the inspectors had decided erroneously as to the age of his beast; and in reply Mr. Webb, in defence of the inspectors, declared their judgment a correct one, taking as the criterion the animal's mouth. He suggested that wherever any doubt arose as to the age of an animal, the appearance of the mouth should decide the point, and then those animals which had not been so much forced would stand a better chance.]

MR. MOORE, the chairman of the committee, in acknowledging the toast, took a review of the objects of the society,—to meet the astonishing increase in population by an equal increase in the quantity of and a great improvement in the quality of human food; and in its efforts to attain these ends, by the distribution, since its establishment, of premiums, the total value of which considerably exceeded 12,000*l.*, within a district of thirty miles around Manchester. He was sorry that the show of stallions and brood mares had not been so good on this occasion. There was now and had long been a manifest improvement in the quality of heifers as well as cows in the summer pastures of this district. There was no place in the kingdom where such pigs as were shewn here, could be met with. [Mr. Hillyard, if there is such a place I have never seen it.] Mr. Moore dwelt on the encouragements held out by the society to the economical and advantageous cultivation of farms, to the good conduct and industry of farm servants and of agricultural labourers, as all tending greatly to promote the ends which the society had in view, and the general comfort and happiness of the community.

The prizes of last year, in plate and the society's medals, were then distributed by the chairman. He subsequently presented to Edmund Ashworth, Esq., of Turton, late the secretary of the society, four very handsome silver fruit dishes.

MR. ASHWORTH, in returning thanks for the present expressed his strong attachment to the society, of which his father was the oldest member, and had acted as its secretary 29 years, since which he himself had filled that office seven years. He bore testimony to the invaluable labours of the committee, and to the great experience and unbending integrity of the judges.

The next toast was "the Vice-Presidents elect,—E. J. STANLEY, Esq., Joseph BRUCKSHAW, Esq., Joseph BIRLEY Esq., and S. H. HASLAM Esq."

E. J. STANLEY, Esq., in acknowledging the toast expressed the pleasure he felt at the opportunity of assisting in the celebration of such meetings, particularly when, as on this occasion, they were held in a great commercial town, as it proved to him how intimately these two great interests were allied, and how cordially they acknowledged their connexion,—it showed what support the landed interest might expect from the commercial. At the present time, when it was impossible not to feel that the agricultural interest was to a certain degree depressed, they could not but deplore the present low prices; but

they must not forget that the state of the country must be prosperous indeed when agriculture flourished and prices were low. Let them therefore, be assured that though the agricultural interest be temporarily depressed, the prosperity now enjoyed by the commercial interest would ultimately re-act upon it, and thus the interests of all would be effectually shielded and benefited. Joseph Bruckshaw, Esq., also returned thanks. After the toasts of "The inspectors,"—Mr. Martin, who has kindly come forward to take the office of our secretary,"—and "the Lord-Lieutenant of this county, the Earl of Derby,"—had been drunk, Mr. Hillyard said that he wished he had been able to bring with him some roots of the blood red mangel wurzel, of which he thought himself a good grower. The roots shown that day would beat his in weight; but his were superior in nutritive matter. All knew that the best mangel wurzel was the yellow, but it was so shy of coming up that he had ceased to grow it, and the blood red was the next best. He also wished he had brought two of his sort of Swedish turnips. Better he could not get. His friend Mr. Coke's, were not to be compared with them. But he had brought with him a little bag of the seed, and he wished his friend Mr. Charles Walker would take the bag and circulate it. He must not eat one turnip from it, but give to those disposed to grow. He produced a sample also of the skinless oat, which he said was a valuable article to an old man like himself, in the making of water gruel. He also gave a sample of the Chevalier barley, of which he said he had got seven quarters five bushels per statute acre last year, and he wished that instead of wheat he had sown all barley on his farm. He gave the samples to any one present who might be desirous to sow them, and if he had any thing they wanted, it was at their service.—The Vice-President, in giving the Liverpool Agricultural Society, said that the sister towns were kindred in agriculture as well as commerce, and that he looked upon such societies as schools for adults, in which the schoolmasters were those gentlemen who had been kind enough to come from a distance to teach them valuable lessons. A man at home easily imagined that his produce was the best, and it was only by coming to such schools that he discovered he had not the best of every thing.

Mr. Formby, of the Liverpool Agricultural Society, acknowledged the toast, and the next were,

"The Lord-Lieutenant of the county of Chester, the Earl of Stamford;" "The Members for the county of Lancaster," and "The Members for the boroughs of Manchester and Salford."

Mr. MARK PHILIPS, in acknowledging the last toast, said that if the farmers of the district entertained the opinion that the members for these boroughs, being connected particularly with the commercial interest, were therefore indifferent to the interests of agriculture, they had formed a very erroneous estimate of the feelings and wishes of those representatives. They were entrusted not merely with local interests, but they had a great and important charge entrusted to them for the public at large, of which the agricultural interest formed so large a portion, that they could not disregard it. Mr. Philips then expressed his regret that there had been no competitors for a premium he had offered last year for a system of accounts in connexion with the various departments and operations of farming. He disclaimed all desire on the part of himself or the committee, to pry into any of the private concerns of individuals, his object being to induce attention on the part of the farmer to the advantage and indeed necessity of systematising his accounts, to make that arrangement in

them which would show the various expenses in connection with the different crops, and which, in reference to the different branches of their trade, mercantile men felt compelled to observe and keep, and without which separation, the manufacturer would be completely ignorant as to the particular sources of his profit and loss, and could judge only by the gross amount of his trade. He should be most happy to repeat the premium for competition amongst farmers, and he would leave the form of accounts to the committee.

The next toast was "The Members for the county of Chester."

W. TATTON EGERTON, Esq., acknowledged the toast on behalf of himself and colleagues, and expressed his great satisfaction at witnessing the kind and warm feelings entertained by gentlemen engaged in commercial pursuits to the landed interest generally.

Mr. MOOR said that as they had now residing in this town one of the most distinguished philosophers of modern times, one whom it had pleased his majesty, and the universities of this kingdom, as well as most of the learned societies in the world, to honour, he trusted this society would not lose the opportunity of paying a mark of respect to Dr. Dalton,—(*cheers*)—a gentleman not more distinguished for his eminent and brilliant discoveries, than he was beloved and respected for the simplicity and disinterestedness of his life.—(*Hear.*) This society would do honour to itself, and only an act of justice to this great man—(in fact it would disgrace itself if it omitted this opportunity of paying him respect)—by electing him an honorary member of this society by acclamation.

THE CHAIRMAN said there could be but one feeling, that of accordance with the proposition; and our distinguished fellow townsmen was accordingly elected by acclamation.

Mr. HILLYARD, in acknowledging the toast of "Prosperity to the Northamptonshire farming and grazing society," said that those present would not be surprised to hear that it was prosperous, when they were told that its patron was Lord Spencer, who took great interest in its welfare, and gave to it more than 100*l* a year to dispose of in premiums. At the suggestion of his friend Mr. Philips, he had written to Lord Spencer to say that if he could attend this meeting it would give great satisfaction to the people of Manchester, but he (Mr. Hillyard) was afraid that his lordship's old enemy and tyrant the gout, which he could not keep off by regimen or exercise, had prevented him. His lordship was one of the best breeders of short horns in the kingdom, and had a herd of cows perhaps the most valuable in the country.

In acknowledging the toast of "The Strangers,"

H. HANDLEY, Esq. expressed the gratification he felt at the union of agriculture and commerce, which he agreed with the vice-president should be as close a one as that of man and wife, and he trusted they would never be divorced. He had ever pronounced that man the most wicked or the most weak of politicians, who felt himself or would excite in others the slightest jealousy between the two. The farmers in his own purely agricultural district viewed with admiration the effects of the enterprise and skill of the manufacturers, in whose prosperity they rejoiced as that of their best customers; and he truly rejoiced to find that sympathy and good will existing here, which he felt would continue because it was founded on the conviction that the agricultural interest kept in motion that first great engine, the belly, without which manufacturers, with all their skill, would not

be able to keep going their countless machinery. That this union might long continue, and that there might be no bickering, between man and wife, he, as a married man and an agriculturist, most sincerely wished and trusted.

The remainder of the evening was spent in cheeful conviviality; but our want of space precludes us from further noticing the proceedings.

## RULES FOR REPAIR OF ROADS.

*The following Rules for the Repair and Management of Roads have already been published, but cannot be too generally known.*

**LABOUR.**—All labour by day wages, as far as possible, should be discontinued, surveyors should make out specifications of every kind of work to be performed in a stated time, and after public notice should let the same to contractors, and be particularly careful in ascertaining that the work is completed according to the contract, before it is to be paid for.

**REPAIRS.**—Roads thirty feet wide should have the centre eighteen feet in breadth, composed of the hardest and best materials, twelve or thirteen inches in thickness, and the sides should be nine inches below the middle surface: the best line of the cross section is a segment of a flat ellipsis; this shape not only assisting the water to pass from the centre towards the sides, but contributing greatly to the drying of the road by allowing the sun and air to produce a great degree of evaporation. Surveyors should constantly use a road level, that the surface may be preserved of one uniform curvature. Roads having no solid or dry foundation should be reconstructed, and laid in the above-mentioned form, the eighteen-feet centre should be formed of a layer of stones seven or eight inches deep (each stone about five inches broad at the face) carefully laid by hand, with the broad end downwards, in the shape of a close pavement, and the cavities filled with small stones or stone chips to make all level and firm; over this foundation should be laid a coating of broken stones six inches thick, and the six feet on each side of the eighteen feet centre (making in all thirty feet) should be covered with a layer of good clean gravel six inches in thickness.

Roads having imperfect foundations, or being hollow in the middle, should have the centre raised by large stones, and covered with a coating of broken stones, sufficient to give them a proper shape. In a report lately made to the House of Commons it is remarked, "that a road can never be perfect as long as a single spot of its surface shall not be according to the exact line which is pointed out for its transverse section; on such a spot water will settle and lead to large hollows and ruts; and the road level should never be out of the hands of the workmen, or the mind of the surveyor." The reducing of the wide parts of the road to thirty feet, has been attended with great advantage; the proper line of transverse section can be more accurately preserved, and the labour and expense of keeping the surface clean and in repair, is much diminished.

Where the breadth of that part of the road which has alone been formed of hard materials, and over which the carriages usually pass, is less than eighteen feet, it should be widened to that breadth, first digging away the earth, then forming a foundation as above described, and filling up with broken stones at least ten inches deep. In or near large towns, the whole breadth of the road should be covered with

broken stones, and where a road has already a good foundation and shape, no materials should be laid upon it but in thin layers, for the purpose of filling ruts and hollow places as soon as they appear. In this way a road once well made may be preserved in complete repair at a small expense.

**MATERIALS.**—Where materials consist of quarry or field stones, the hardest part of them only should be used. Hammers, light and well steeled, with slender handles, should be provided for breaking stones, and each stone should be broken, so that at its largest dimensions it may pass through a ring of two and a half inches in diameter; stones can be thus broken by persons past hard labour, and should be done by measure where the materials consist of gravel. Only the stones exceeding one inch and a half in size should be used in repairing the eighteen centre feet of roads; these should be raked from the gravel as thrown out of the pits, which will in most cases save the expense of riddling and washing, and the small stones and gravelly part remaining will serve for the sides of the roads and footpaths.

**DRAINAGE.**—All ditches ought to be on the field-side of the road fences, and connected with the natural water-courses of the country; the stone cross drains and culverts which pass under the road, should be numerous, and continued through under the fences into the ditches.

It ought never to be forgotten, that in order to have the surface of a road perfect, it must be kept completely dry.

**TREES AND FENCES.**—It is absolutely necessary to remove trees from the sides of the roads, and to keep the fences under five feet in height. Not less than 20 per cent. of the expense of repairing roads is incurred by the trees and improper state of the fences keeping the road wet, and by that means occasioning a rapid destruction of the materials.

## INCLOSURE OF WASTE LANDS.

TO THE EDITOR OF THE LIVERPOOL MERCURY.

SIR,—I would not encroach on the valuable space of your journal if it were not to combat the arguments of an able correspondent, who writes on a subject of great importance to the community at large, but whose pen I fear is guided by popular prejudice. As the *Thornton Farmer* is so desirous to elucidate truth in the discussion, I think it would have been only fair to have first investigated some of the assertions and gross insinuations of your previous correspondent, *Mr. Brown*, instead of throwing his ball at me; but, however, as I have been so flatly contradicted I will proceed to inquire how far the *Thornton Farmer's* opinions are correct or deserving our notice. He condemns the inclosures of waste lands because a cottager keeps a cow, a pig, and a few geese, and asserts that these inclosures deprive him of these luxuries,—nay, his very cottage and his garden; and then your correspondent proceeds to state that the generality of landlords are bad, and are in the habit of pulling down cottages and converting small farms into large ones, and that the agricultural distress is mainly owing to this cruel Malthusian system. It is to be regretted that any man should be led so wide of the fact as to give publicity to these absurd opinions. Does not the *Thornton Farmer* know that the cultivation of waste lands has long been advocated by men of all political creeds,—by philanthropists who have only had the good of mankind at heart? The subject has, in fact, been exhausted, and every effort has been made to get our country cultivated as it ought to be.

That great friend to mankind, Sir John Sinclair, so far back as the year 1796, earnestly advocated before the Board of Agriculture a general inclosure act, but reserving, I am happy to say, a portion for garden ground to every cottager. At that time, upon a careful calculation, there was no fewer than 22,351,000 acres of land in England uncultivated; and Sir John very justly observed, that every acre of land cultivated at home is more valuable than the most extensive possessions obtained abroad. Will the *Thornton Farmer* deliberately say that these millions of acres ought to remain out of cultivation for the sake of encouraging a defective system of rural economy? But to the cottages. I really wish your correspondent would establish one single instance of a cottage having been pulled down in England against the will of the owner, and under any inclosure act,—or even deprived of his roods of garden ground and croft. I fear it has been too much the fashion to give utterance to these gross libels on our countrymen without reasonable foundation. Surely the *Thornton Farmer* will not say that such an outrageous system exists in England!

I will not deny, Mr. Editor, that some inconvenience is sustained, and temporary loss too, by inclosures; but let us look at the great public advantage:—the abundant increase of food grown on our own soil; the increase of labour, too, besides the certainty of cheap food for the consumer; and do not let us overlook the habits of industry which are encouraged when the cottager finds it is not just to keep his cow, his pig, and his geese at the sacrifice of a great public good. Permit me, Sir, to say that no measure would benefit this country more than dividing, at an easy rent, a few millions of acres of these waste amongst our surplus population. Would it not for a long time put a complete stop to emigration? Why send we the very sinews of our nation to cultivate distant lands when there is such abundant employment to be found at home? What would be the effects of giving an acre, and erecting a cottage each, to about 50,000 industrious labourers, I will not here stop to inquire; but I am sure the results would be the most brilliant that ever attended any public measure adopted in this country. The King of Holland has acted upon this very principle; and surely our legislators and workers out of reform have here a wide field for the exercise of their benevolent dispositions to benefit their countrymen. The *Thornton Farmer* will here find that I am no enemy of the poor, or wish to write against their interests. I shall always be glad to see the cottager keep his cow, his pig, and his geese, and have his homestead, which I admit makes him so independent and happy; but I would have it under the sanction of a just claim, and not upon sufferance. I will calmly bear the burden of meeting these unjust attacks upon the land-proprietors; certainly I have not the felicity of being one myself, and have nothing to serve but the cause of truth, and a desire to despel prejudice. The *Thornton Farmer* broadly asserts that landlords in general are bad, and that to them is mainly owing the distress of the occupier. I have here to contend with an old-fashioned opinion; and because it has gone so long uncontradicted, is now considered standard truth. It is much easier to make an assertion than to establish facts. Circumstances have led me much amongst the occupiers of the soil; but seldom have I found, on close inquiry, that landlords generally deserve the aspersions cast upon them by the *Thornton Farmer*. I fearlessly appeal to the farming community as to the degree of credit to be attached to the assertion so wantonly made. When I said it was easy to take a farm of from ten to one

hundred acres, I by no means implied that the depression was so great as to throw these farms out of cultivation, or on the landlord's hands. I am sure in many parts of the country it is quite a favour to take a tolerable farm; there are always plenty of applicants when one is likely to be at liberty. With all deference to the *Thornton Farmer*, I again repeat that a better understanding prevails between landlord and tenant, and I am sure there is a mutual wish to meet the times.

I regret to be compelled to say that one great drawback to the prosperity of the occupier is the gross ignorance which prevails, and that the march of science has done so little real good for the very men by whom improvements and discoveries were so much needed. I hope, however, to see better times; and these can never arrive without an increase of that good will and confidence between landlord and tenant to which I have alluded, and for the continuance of which I ardently pray.—Yours, &c.

Manchester.

THOMAS BAKEWELL.

#### TO THE EDITOR OF THE YORK HERALD.

SIR,—The harvest is now finished and as usual the scythe, the scythehook, and teetled sickle have all been used in the cutting of the crops. The scythe I am happy to say, is gaining on the affections of the farmers in this part of the country; indeed we have been often astonished it was not sooner adopted. I believe it is now generally allowed that its rejection did not proceed from any defect in the implement, but from want of knowledge in the scythe men. We have had another year's experience of the cradle scythe, and have no hesitation in saying that it is the most efficient implement for cutting standing corn with which we are acquainted. Our reapers are now complete masters of their weapon, and it is pleasant to see the ease and dexterity they display when using it. To us the sight was splendid and pleasing in the highest degree, and while we were admiring it we could not resist the temptation of offering our mite of approbation to the workmen. It cannot altogether supersede the family of hooks, but we really think its introduction in some districts will be of infinite advantage. The working classes looked rather suspiciously on it at first, as they generally do with anything that is at all out of the old beaten track; but the farmers, certainly the best judges in matters of this kind, viewed it with a more auspicious eye. We have 80 acres of corn cut with the scythe this season, at a reduction of 30 per cent, on the usual cost of reaping with the hook, and I have much pleasure in saying the work is better done. Neither gleaners, geese, nor pigs, appear to have any enjoyment in fields cut by the scythe; and were the Mosaic laws still in force little benefit would arise to the fatherless and widow if the cradle scythe had passed over the field. A good scythe-man will cut from one to two acres per day, and a woman and girl will gather it up and put it into bands. We have children of tender years assisting their parents in the light labours of the field and with good effect. Had they, it is true, been from city or manufacturing towns their early efforts might have been trifling; but they were the children of the cottage farmer, who had brought them up in all the usages of rural life. If you think this worthy a place in your valuable paper you may insert it.

I am, Sir, Your obedient Servant.

JOHN BLACK.

Marske Farm, 8th October, 1835.

## AGRICULTURAL REPORTS.

### BERKS.

The harvest being finished, and the weather suitable, the wheat sowing has commenced in right earnest, and the upland farmer is now as busy with horses and men as he was in the middle of August. A great deal of wheat has been sown during the last week, and before many days are expired most of the high lands and chalk hills to the south of the Vale of White Horse will be finished, and the sowing on the lowlands proceeded in as fast as time will permit. The heavy showers that we have had of late have done a deal of good by enabling the farmer to knead down his wheat land in a proper manner, and it is not often that we see it work more kindly either in ploughing or harrowing than it does this season. The wheat being good and the soil in a pulverized state, it is supposed that this grain will come up quick and with a good broad blade. The wheat crop having for the last two or three years paid worse than either barley or oats, and manure being very scarce, there will be a less breadth than usual sown this season, particularly in parishes where the soil is not over kind for that grain. Wheat that is clean and fit for seed is rather scarce, and had it not been for the threshing machines there would not have been procured a sufficient supply to sow the land in time. The drilling of wheat is in many places getting rather out of fashion, for the small saving of seed at the present low price is not considered sufficient to pay the extra expence and trouble, and besides this there is one very great objection to the drill, which is, that wheat which is properly dressed so as to prevent smut cannot be regularly deposited by the drill, because it sticks to the cups, and it is not improbable that many of the complaints of the loss by smut in other counties has principally arisen from a neglect of the dressing, and using the wheat dry in order that it may with facility run through the drill; and it is well known that when a farmer once gets this disease into his crop it is nearly as infectious as the mange in horses or the scab in sheep, and will require some little time and very careful management to get entirely rid of the nuisance. A very large breadth of the trifolium has been sown in this neighbourhood, and in almost every field we see pieces of it up and looking well; it appears not to flourish so well where the land is ploughed, but does a vast deal best when only let in with the harrow or scarifier, or trodden in with sheep. This plant will not do on thin chalky soils, or on cold wet soils, but if it will stand a severe winter, its usefulness on many soils, and in many situations, will be completely established. A new sort of oat called the winter oat has just been introduced into this neighbourhood, and if it possesses but half the good qualities it is said to possess, it will be invaluable; its advocates say it will produce a great quantity of feed for sheep in the autumn, and again early in the spring, and then produce ten or twelve quarters to the acre afterwards; of course we can say nothing respecting its merits until another season. A great many vetches have been sown, and also a considerable breadth of rye and winter barley, and when we also take into consideration the number of acres of

promising trifolium, we need not, I think, fear a deficiency of sheep-feed next spring. A few acres of winter beans are generally planted in this neighbourhood, and they are most times tolerably productive. We are sorry to state that there is but little improvement in the turnip crop, and we can scarcely expect any alteration for the better solate in the season. The early sown, which for a time looked well, are lately become curly in the leaf, and are going to decay very fast, having been injured by the grub at the root, while the late sown ones have made a much less progress than was expected, and will certainly be of little use, except to produce a few greens in the spring. The stock of hay in the country is large and the quality uncommonly good, and there is also a great plenty of straw, which this year will prove excellent fodder; so that keep we think is not likely to be very scarce; but we confess that the grass at the present time does not grow so fast as we anticipated, and the sheep will be obliged in consequence to go to fodder a month earlier than usual, and we know of a few farmers that have already the whole of their flocks at straw. The value of the Swedish turnip will be proved this year to a demonstration, for it has been neither injured by the dry weather or eaten with the maggot, but is everywhere looking well, and has every appearance of producing an abundance of winter food. Mangel wurzel has also stood its ground well, and has two most valuable properties, namely, it is never injured by the turnip fly, or scarcely ever hurt by the drought. the loss of the turnip crop has completely cut up the sheep trade, and we scarcely ever remember such a panic or so great a fall in so short a time. In the course of about six weeks the depreciation has been as great as 30 per cent., and there is even a dull sale at this decline with every thing but ewes. We have often remarked that such rapid and great changes are but seldom permanent, and we shall not be at all surprised if the trade were again to rally before winter, for the stock of sheep in the country is, we think, by no means large, and mutton seems not unlikely to be still higher in price. Pigs are selling rather briskly, and will, we think, be worth more money. It is now ascertained that we were right in our statement respecting the yield of the wheat, and many a farmer and dealer will, we think, find themselves miserably deceived that have been calculating on the statement of Cockneys, and other ignorant persons, who have been riding about the country, pretending to give accounts of the crops of grain, and have been sending in reports to the newspapers of the great, and enormous, and abundant crops of corn, and of the probability of a still further decline in the market. We again state that, after taking considerable pains to ascertain the truth, and after obtaining every information that we possibly could, we find there is a deficiency generally on good soils of 25 per cent. from that of the crop of last year, and on some light and gravelly soils a deficiency of 40 or even 50 per cent. The quality is also variable, some of the samples being very plump, and weighing 65lbs per imperial bushel, while other samples are shrivelled and thin, and fitting only for seed.

Owing to the great bulk of straw, the threshing of wheat is a most tedious process, and neither men nor machines can get out above half the quantity which they did last year; and although some of the pitched markets seem to make a great show by exhibiting so many sample sacks yet the bulk belonging to most of these sacks is very small, and the stock of wheat on hand will be pretty much cleared out before the sowing is done. The wheat markets continue firm, and will, we think, be dearer, especially when the deficiency in the crops becomes better known, and there is water sufficient to drive the mills, and the stock of old wheat is a little worked off. Barley also yields sadly out of the straw, and the thresher complains because he cannot get enough to please his master. There are but few men that will thrash a quarter per day this year, and we fear that the produce of barley per acre will fall short of what we anticipated, but we shall be better able to give a correct account of this and other sorts of grain in a future report. The price of good barley advances, and the best Chevalier is now worth 35s per quarter. Vetches were a bulky crop in regard to straw, but they yield very sadly, and in general they do not yield more than two quarters per acre where there ought to be five quarters, according to the abundance of straw. The threshing of vetches is an expensive job, for it costs as much as sixpence per imperial bushel. Cloverseed is we think, altogether a middling crop, being short in quantity and not very good in quality, and badly harvested or else still abroad and nearly spoiled; it is expected to be dear. Apples are very plentiful, but, owing to the drought in the summer, they are not of a very large size; the inferior sorts are selling at the low price of half-a-crown per sack. Walnuts are very scarce, and worth a shilling a hundred, but hazel nuts are cheap and plentiful.—Oct. 5.

#### KENT.

We have of late had some very copious showers, which have quite altered the appearance of the country; but, fortunately, the harvest was quite finished ere the change took place, with the exception of the canary, which was out in some places. Grass has grown much since, and there is now good feed for cattle and sheep; turnips have certainly improved, but not to the extent that was expected. We are now busy getting out manure for the ensuing wheat crop, and ploughing it in, which we are enabled to do in a workmanship-like manner, owing to the late rains, and some on the strong wet soils have already commenced sowing. We still have complaints of the quantity of straw that is obliged to be thrashed before it will yield a quarter of wheat, and to those that have not a machine it is very expensive, which takes from the present ruinous low price of this grain. The barley and oats thrashed are in general a good sample, but on light lands some barley, owing to the dry weather, is but thin, but oats in general are good; the produce of peas is above the average, but in beans it is much short, but they are an excellent sample.

The markets for cattle and sheep have, since the alteration in the weather, been short, with an improvement in prices, more especially with sheep. Our markets for corn are quite overstocked with samples, and the millers, &c., have it almost at their own price, the demands on numbers of us obliging us to sell at the present ruinous prices.

Wool is almost a dead letter with us, so little

is there doing in that article at the present moment.

Numbers are now getting up their potatoes, which prove to be but a very indifferent crop, which we hear is the case generally.—Oct. 14.

#### SOMERSETSHIRE.

Nearly the whole of this county has suffered from the drought of summer, continued throughout a considerable part of the autumn. The low moors, which are divided into enclosures by deep ditches, were in a complete state of commonage; and the cattle ranging at large through hundreds, and sometimes even thousands of acres, in quest of water and pasturage, afforded unceasing toil to the herdsmen. Grass was so burnt up, that the very worst wet high cold lands appeared entitled to preference when vegetation was almost everywhere suspended. Working horses, oxen, and cows, have in most places, during the autumn, been supplied liberally with hay, and both sheep and beasts have been sent to market half fat, from the inability of the grazier to better their condition. Turnips have so generally failed, that scarcely a plat of good ones is to be seen for many miles; even the mangel wurzel, so patient of drought, is so small, as to be scarcely worth the trouble of housing. The rain which has fallen during the past month has relieved the whole population, both in towns and villages, from a sore distress, the want of water; and both man and beast experience no longer a scarcity of this necessary article. Potatoes at one time afforded no hope of any thing like an average crop; but since the moisture got well down to the roots the haulm looks flourishing, and they have become larger; where, however, new tubercles have been formed, the first have become greatly deteriorated, and the general prospect not improved. They are in sufficient abundance at market, and are sold for 2s 6d a bag of eight score pounds; this low price is probably induced in a great measure by the ruinous depression of wheat. It is quite sickening to say any thing of the price of this latter article; we will, therefore, only state, that although the yield per acre of the late harvest, as far as we are able to form a judgment, is below an average produce, a large workhouse in this neighbourhood is supplied from Michaelmas to Christmas with good second wheaten bread, at the rate of a dozen four pound loaves for 3s 3d, or at very little more than  $\frac{1}{2}$ d a pound for bread baked on the day preceding delivery. Fat heifers are worth about 7s a score, and fat sheep 4 $\frac{1}{2}$ d a pound. Of store cattle there is a great glut in every fair and market, and great difficulty experienced in converting them into money. The farmers of this county who send up to Weyhill many thousands of store sheep have returned with woful countenances. Their ewes did not sell for more than 27s a-head, which of the same quality last year fetched 47s. This depression is the result of a general failure of the turnip crop: and if Providence should favour us with a moderate winter, as there is abundance of hay any excellent straw, and no excess certainly of sheep, we anticipate, ere long, more favourable prices. Wool has evinced rather a tendency downwards. Combing washed is worth 14 $\frac{1}{2}$ d per pound. Every labourer of character and ability readily finds employment at high wages, considering the low prices of all the necessaries of life. Women and children are in great request for picking apples, which being unusually small, will furnish a long employment, at something more than

double the price per bag of former years; while the farmer is obliged to sell his cider for almost nothing—certainly for no profit, when he has paid all the attendant expenses. Wheat sowing has just commenced on the hills, and the land is in excellent condition for the reception of the seed. Generally, we think the land under preparation is not so much as we have seen for many years past. When the owner occupies, or where the tenant is not much pressed (a somewhat rare thing now-a-days), the breadth is decreased—in these instances the growth of vetches is proportionably increased.—Oct. 16.

## LYNN.

The harvest in this neighbourhood has been finished about a month and mostly in the best possible order, excepting in the fens, where there is still a few oats out.

We have deferred sending our annual report until we could form an opinion of the yield and quality from the threshing and delivery. The supply at present has not been equal to general expectation, but sufficient for the determination of my report.

Commencing with wheat.—The breadth was very much less than that of last year, and there is more variety of quality than we have known for many years—smut or black prevails to a considerable extent, and there is also a singular defect or deficiency in the ear, by a failure in some instances of a whole row or set, and in others partly so.—The heavy rains of June beat down the crops upon the marsh and fen lands, and they have thereby suffered very materially in quantity, to the extent of one to two quarters per acre, and the quality will vary from 58lbs to 64lbs per bushel—upon the mixed and light lands there was a deficiency of plant, but the quality is very fine, weighing 63 to 64lbs per bushel. In the fens the crop is altogether the worst, having been more laid and smut more general, that a considerable proportion is of very inferior quality—therefore upon the whole we calculate we are about a sixth under an average.

Rye is very fine both as to quantity and quality, weighing 57 to 60, and some even 61lbs per bushel.

Barley is a full average crop—the rain in June came just in time to save it, and brought it to the most perfect maturity.—About half was harvested in the finest condition, and exceeds in weight that of any past year within my knowledge, say 54 to 55 and even to 56lbs per bushel—some quantity was cut and in the rain, and is more or less stained and sprouted, but that standing during the wet is of excellent malting quality, although 2 to 3lbs per bushel lighter than the perfectly bright.

The breadth of Oats was considerably larger than last year, both upon the high lands and in the fens, the latter especially, the yield and quality are excellent.

Beans also were more extensively sown but vary much in the same district, some were attacked by the fly and partially injured, where they escaped there appears to be a fair crop, and of very fine quality.

Peas are an abundant crop of very handsome quality, and secured in the best possible order.

Rapeseed has again become an interesting object in the fens, we have had a fair quantity at market this season.—The yield proved very much worse than was expected, but the quality was good.—Oct. 6.

## NEWCASTLE-UPON-TYNE.

The harvest in this and the adjoining districts being now nearly completed, we beg to offer the result of our observations and inquiries concerning the various crops.

Wheat.—From the violent winds in June, the straw of this grain was, in exposed situations, much broken, and where this has occurred the yield is very bad, but generally it proves about the customary produce on thrashing, and having upon the whole been secured in fair condition, weighing from 61 to 64lbs per bushel, have no doubt it will turn out what may be called a fair average crop, though about a fourth short of the large crop of last year. Our more opulent farmers still hold large quantities of old wheat, and there are about eight thousand quarters of free old wheat here in granary.

Oats.—The rains in July came most opportunely for this grain of which the crop is every where well reported, the quantity large and the quality fine; such as have yet come to market without being too much hurried, are of good colour and full in the pickle, the common oats weighing from 38 to 40lbs, and the potato from 41 to 43lbs per bushel—the immediate consumption must be large, as there are few old oats left either with the farmers or merchants.

Barley.—In our own neighbourhood, and what is called the Tyne Side district, this crop is the finest we ever remember—abundant in quantity and fine in quality, weighing from 54 to 56lbs per bushel; a great portion from Chevalier seed, and will malt well; but in the more remote parts of the county and in Scotland, from whence we have for the last two years had great part of our supply, the late rains have materially injured the quality, and will, when contrasted with the fine south country samples, be considered by most of our maltsters as unfit for malting, that we must look to the south this season for our principal supply, as the demand will be large, the stocks of malt being almost quite exhausted.

Beans will this year be a good average crop, both as to quantity and quality. Rye is little sown here, the quality is fine, but in quantity very deficient, though from the low price of wheat, the consumption is at present limited. Grey peas, according to the quantity sown, are a good crop, but they are of limited cultivation. White peas are not at all sown in this neighbourhood. Potatoes in some of our best districts is this year almost an entire failure, and which our farmers seem at a loss to account for. They are at present selling at from 5s to 7s per load of 2½ cwt.

## NORTH RIDING, YORKSHIRE.

We have got all our crops in, though some are not in the best state; the 24th and three following days in August have done more mischief than I expected; they were very close and warm as well as wet, and caused me to have about six acres of barley pretty well sprouted; the wheat that was out, rather suffered; however, taking all into account, we ought to be thankful for so abundant an harvest. With respect to the yield, I can only state how mine does. I have thrashed nearly thirty quarters of wheat, and thirty quarters of barley, (for want of money,) and certainly both yield better than I expected. I thought the wheat would not yield well, because there were many deaf ears in it; oats and beans caused much anxiety, as they were out in showery weather we have had at the latter harvest. I scarcely have patience to talk about prices; the best white wheat is only worth 5s. a bushel, and cost 7s. at the least. Barley is only worth 30s. per qr., and oats 28s. Oats and beans sell the best of any thing. With respect to stock, all sorts are much lower; I sold my lambs last year at 29s. a-piece; this year, although equally good, I could not get above 25s. Cattle are also lower. Rents not at all. The blacksmith, carpenter, and shoemaker, charge the same as when wheat was 10s. per bushel. It

is with great pleasure that I have now to state that the annual ploughing-match of the Boroughbridge Agricultural Association was held on Saturday week, when twenty-two men and boys strove to win: the day was fine; and any one who had the real good of his country at heart, could not but be gratified. Afterwards the members sat down to an excellent dinner, and it was proposed that the present state of the farmers should be taken into consideration, at the next quarterly meeting. The thanks of the neighbourhood are due to Thomas Duncombe, Esq. for his exertions in the cause.

#### PERTSHIRE.

Harvest commenced in the early districts about the beginning of the last week in August, and by the middle of the first week in September was general all over the country. A long period of dry weather was succeeded by a length of moist weather, which continues without intermission to the present date. We have seen some statements of the depth of rain that has fallen as high as 9 inches within six weeks; in our rain-gauge the depth from the 24th August measures within two decimal parts of 7 inches, an immense fall in so short and important a period. Heavy showers, however, were frequently followed by brisk winds, with sunshine; and the farmer, roused to attention by the threatening aspect of the weather, lost not a moment in cutting and securing his crop during the intervals which the weather allowed. In the lower districts all has been cut, with trifling exceptions, by the end of August. Up to the 29th of September the winds had been moderate, though frequent, and nothing was shaken out; on that day, however, a very high wind proved seriously hurtful to standing oats on upland farms in the higher districts, when a considerable proportion was then still uncut; from some we have seen, which had been exposed on that day, we consider that more than double the seed was lying on the ground. As the weather prevented cutting in due time, the latest portion of the crop was for the most part over ripe, and taking up clean was next to impossible. The whole of the crop being got into the barn-yard by starts, very little has been secured in good condition, and samples will come soft to the market in the early part of winter. Wheat on low-lying rich soils was lodged, and although in some instances the quantity may reach an ordinary average, yet the quality will be coarse; on soft, rich, low-lying loams, the quantity, too, is in many cases sadly deficient; on exposed situations the crop is not bulky, but the sample is fine, and a fair return in quantity. Barley will turn out a full crop, but may not be so well coloured as in drier harvests. Barley or wheat, with a few exceptions, have suffered little from sprouting. Oats have suffered most by sprouting and shaking, being longest exposed; making allowances for such drawbacks, oats may be estimated at an ordinary average crop. Peas had podded well, but were got in with much difficulty; some of the early varieties lost part of the grain in handling, and in a few trifling instances on close lands some have been entirely lost. Beans in the lower districts are for the most part in, and have sustained little damage. This plant is not much cultivated on elevated situations although it is quite possible that an early variety might be found that would grow as high up as oats. Potatoes, after the rains commenced, took a sort of second growth, the quantity will thereby be increased, but the quality will have suffered. Turnips have not swelled so much as usual in the autumn months, the ground being too much soaked with rain. Very little wheat has as yet been sown, the state of the soil not permitting. In the corn market there has hitherto been little done with the present crop.

The price of cattle and horses at the autumn fairs were much lower than at the corresponding periods last season.—Oct. 6.

#### GLAMORGANSHIRE.

The month of September proved unusually wet; the depth of rain exceeding 7 inches. The long drought which preceded having parched up the ground to such a degree, that even this large quantity of moisture scarcely saturated it to a sufficient depth, and the springs and rivulets have not yet resumed their usual vigour. The pasture land, turnips, and the young clover, strongly manifest its beneficial influence, and if October proves tolerably mild, the present scanty stock of winter keep will be considerably augmented. Turnips are still very patchy. Before the rain came, the prospect of young clover was most unpromising, and although it is greatly restored, yet it is still very deficient in plant. The trifolium incarnatum has been very generally sown to supply these failures, and if it will continue to succeed by merely harrowing it on the stubble, it will prove an invaluable substitute when the clover fails. The season has been unfavourable for harvesting the clover-seeds. The quantity kept up this year is less than usual, owing to the scarcity of grass during the summer. Stock in general are in poor condition, and in many situations recourse must soon be had to hay for their support, which is likely to render that article dearer before the conclusion of the winter.

The harvest in the vale of this county had been pretty well concluded previous to the rain coming on, but in the hilly district the corn has been much damaged. The new corn brought to market is plump and fine, and weighs well. The heavy crops which were laid early form an exception; these yield very bad, and produce a thin shrivelled sample. Barley and oats are average crops; the former is in general a good sample, and well harvested. The Chevalier proves superior to the common variety; and, if it does not entirely supersede the latter in a few years, it will afford a most desirable change of seed, an object of more importance than is generally imagined.

Wheat sowing has partially commenced. Although the price of this grain is admitted by all to be ruinous, there is not yet any striking diminution in the extent grown. We apprehend that many proceed in this case under the delusion that, as the price is low, they will make up the loss by an increased breadth of land under crop. To those who are satisfied that they can realise any profit, however small, by growing wheat at 4s 4d a bushel, this doctrine is correct; but if, on the contrary, they experience an annual loss upon every acre sown, the less they cultivate the better. Whatever derangement it may occasion to other operations on the farm, and admitting that the English farmer must naturally feel great reluctance in relinquishing the cultivation of a crop which he has ever looked upon as the golden one, yet to a great extent it would be far more prudent to allow the land to lie in grass which, under ordinary circumstances, will yield some overplus towards rent and taxes.—Oct. 7.

#### BONES.

Since the 5th of October there have passed the SOUND, or by ELSINORE, and the GREAT BELT, 2 ships loaded with Bones, bound for Hull; 1 for Grimsby; 1 for Newport; and 1 for Newcastle; for other ports of England not known, 1.

## AGRICULTURAL INTELLIGENCE, FAIRS, &c.

**HEREFORD GREAT OCTOBER FAIR.**—This Fair might now be said to last over two days, for the number of cattle sold on the Show-day would, in many places, constitute a large fair. On Monday, Oct. 19, (the Show-day), a great many fine animals were sold, but the sales were not brisk, the buyers were shy, and prices on the decline. On the following morning, the Fair-day, the streets were filled with cattle at an early hour. The supply was not so large as is usual at our October Fair, neither was the general condition of the animals (so we were informed by many competent judges) so excellent as commonly on this occasion; but this was attributed to the late long drought, and the consequent lateness of the latermath, which has not been available until within these few weeks. The stock was first-rate; and we suggest to our agricultural friends not to relax, but rather to increase, in their endeavours to keep the Herefordshire breed in the first rank. We hear from very good authority, that the breeds in Ireland are rapidly improving, and bid fair to rival even the breed of Herefordshire. Should that day ever arrive, the demand for our cattle for the Liverpool, Manchester, Birmingham, and even the Shropshire and Worcestershire market, will slacken surprisingly. The business commenced early in the morning, and although, at the commencement, the sales were slow, in consequence of the low prices offered, they soon quickened, for there was a large number of buyers. Fresh stock were in great demand, particularly prime steers and oxen; cows were scarce, and inferior cattle were quite a drug. There was an immense number of stock sold, but the prices, comparatively to those of last October, were depressed at least 10 per cent. The value of stock is now, unhappily, bearing a close relation to the value of wheat. The prices of both products show that the business of the agriculturist cannot, under the present rents, be carried on without trenching upon capital to pay rent. The farmer, like every other capitalist, should do more than gain a bare livelihood for himself and family, and all his labourers; his capital should accumulate, and it is, therefore, most cruel and unjust that he, instead of increasing, should decrease his capital, and that for the purpose of paying rent. There must, consequently, be a thorough and permanent adjustment of rent, so that it might bear a fair proportion to the prices of agricultural products; and, we must confess, that it is with great pleasure we discover symptoms of such an adjustment throughout the country. Landlords need not be assured that, in the long run, such a course will operate as beneficially to them, as it will to their tenants. We may be excused for these remarks, as they are not altogether irrelevant in our account of the fair. We shall now proceed to state the prices of the various live and dead stock at our great mart. Fat cattle realised from 4d to 5d per lb; fat sheep from 5d to 5d½ per lb; sale dull, and stores went off very heavily, at depreciated prices. Store pigs were in demand, at a low price; but of fat pigs, both bacon and porking, the sale was very limited, and the prices ruinously low. In the Horse Fair there was a large number of animals of most descriptions, but the inferior predominated. Good roadsters for the saddle and for the collar were in demand; but there were scarcely any buyers of inferior animals. The supply of hops was considerably smaller than that of last year; the market was brisk; it commenced on Tuesday at 80s, and soon got up to 85s, and several fine samples sold for 90s. On Wednesday, the same activity prevailed in the hop market, and prices ranged from 85s to 95s; the samples were not generally good, and only one or two of the very primest reached 100s and 105s. There were 302 pockets weighed on Tuesday and Wednesday.

**WEYHILL.**—The Sheep Fair commenced on Saturday morning. The number penned was about 125,000. Taking into consideration the roughness of the preceding night, the sheep generally looked in good condition. Sales were dull. Ewes sold from 18s to 26s, and some lots of very superior Downs reached 30s per head; lambs from 12s to 20s, and some realised 24s: wethers 20s to 33s, and one or two lots at 35s. On the average, the prices were full 8s per head under those of last year. A farmer in the neighbourhood of Devizes obtained *one hundred guineas less* money for two hundred lambs on Saturday, than he realised this time twelve months; being at the rate of 10s 6d a head lower. The lambs were precisely of the same description. A great number were driven away unsold.

**HOPS.**—The number of hops pitched was short of last year, not more than one-third of the quantity of pockets being on the hill. The quality varied considerably, yet the demand was such, that every pocket was cleared on the Wednesday night, at prices varying from 25 to 40 per cent. above the calculation, compared with the London market. The inferior hops, particularly on Wednesday, sold as high as the better sorts.—Many buyers, not competent judges of the article, added greatly to improve the prices, and take off the inferior quality useful to the planters, and compensate for the short crop. The price of Farnhams may be quoted from 8l 10s to 10l, a few higher; country hops, 7l 7s to 8l 10s. Many of the inferior hops sold 50 per cent. above their value. The brewers bought nearly all the best hops, many of which will prove very good, though on the whole a large proportion were very thin and defective, but free from mould.

There were a number of fine horses exhibited; and some unusually good three-year old colts; but there was not much demand.

The prices of cheese may be quoted the same as at Reading fair.

**DONINGTON FAIR.**—We had a somewhat large show of cattle here to-day, including stores and fat beasts; the former could only meet with customers at a considerable reduction in price; the latter also were selling at prices below those of September fair. Horses of an inferior quality were rather numerous, but slow of sale at reduced prices; any thing good, of which there were few, realised a corresponding price.

**LEICESTER MICHAELMAS FAIR.**—Our fair during the past week has been numerously attended, the number of cattle shown far exceeded any other one we recollect to have witnessed of late. Good ewes and wethers were tolerably in demand. Lambs fetched from 20s to 26s 6d. Prime fat and store stock fetched good prices, as did horses. On Tuesday the quantity of cheese pitched was immense, the average being from 5s to 5s½ per lb; but a few prime dairies realised 60s. Stilton from 6d to 8d. The rams shown by Messrs. Spencers, of Normanton and Snaresdon, Mr. Hall, Mr. Parr, Mr. Farrar, Mr. Simpkin, Mr. Flintham, and others, were eagerly sought after by graziers from distant parts of the kingdom, thus showing that the pure Leicester breed stands pre-eminent.

At **LYNN ANNUAL CHEESE FAIR** the supply of Cottenham and other cheese, although abundant, seemed scarcely to equal the demand. There was a small show of cattle at Gaywood, but business was dull.

**ST. IVES MICHAELMAS FAIR** was most numerously attended. Although there was an unusual supply of stock, very few sales were effected, and every thing seemed remarkably dull.

**COLCHESTER FAIR.**—We seldom remember to have seen so much stock as was shown at this fair on any previous occasion. The horse fair comprised a great many cart colts, but very few fine ones, and not a single first-rate nag could be found. Scarcely any business was transacted, the prices asked being exorbitant, and the farmers appearing to have but little money to expend.

**MAIDSTONE FAIR.**—The Welch cattle on Penenden-heath were not quite so plentiful as usual, and the demand for them was pretty brisk, particularly on Monday. In the town there was a good supply of, but little demand for, lean stock. The horse fair had a good show of cart colts, but very few nags. There was, however, very little done.

**MAIDSTONE FAIR.**—The buyers were not numerous, yet liberal prices were given for best hops, at the undermentioned prices:—Fine pockets best Kent, from 5*l* to 6*l*; Middle Kents, 4*l* to 5*l*; Weald of Kents, 3*l* 10*s* to 4*l*; Sussex Pockets 3*l* 6*s* to 3*l* 16*s*; Kent bags 3*l* 5*s* to 4*l* 10*s*. The planters were generally looking for better prices.—*Maidstone Gazette*.

**At ST. FAITH'S FAIR** there was a large show of good beasts, but little business was done; a lot of Mr. Hope's attracted much attention. The show of horses was very moderate.

**BOON WOOD FAIR.**—The show of cattle was great, but the demand was uncommonly flat, and not more than one-fourth of the stock shown met with purchasers. There were not many horses on the ground; the trade was also dull, and few were sold.

**KESWICK MICHAELMAS FAIR.**—Though the show of stock was far from extensive, it proved infinitely too great for the demand, and many were necessarily driven away again without having changed owners. The demand was uncommonly slow, and it was generally characterised as one of the dullest fairs ever remembered at Keswick.

**WINCHESTER FAIR.**—Between 20 & 30,000 sheep were penned, which met with a brisk sale, realizing from 1*s* to 2*s* per head higher than at the late Weyhill and Alresford fairs. A great quantity of cheese has already arrived, and a great deal more is expected during the night. The fair is expected to be one of the fullest known for many years past.

**At PRESTEIGN FAIR** there was a large show of fine animals. Many sales were effected, but at low prices. Sheep sold pretty well; fat Pigs 3*s* per stone, Store Pigs sold briskly, though at miserable prices. Salt Butter 9*s* to 10*s* per stone.

**At GROSMONT FAIR**, the supply, though not large, was in quality excellent. Many things, especially fresh steers, found a steady sale, at prices much above what could have been obtained at the fairs lately held in the neighbouring towns, and, indeed, more than could have been realized at Hereford Great Fair, on Tuesday last. Among the numerous purchasers, was a highly respectable and extensive dealer, who bought upwards of seventy prime oxen.

**SHIPLEY FAIR.**—The show of cattle at this fair was very slender, which was principally attributed to Haworth fair occurring on the same day. In-calving cows realized high prices, but of these there was a great scarcity. There was an abundance of pigs in attendance, principally Irish, the breed of which has materially improved since the introduction of the English breed into Ireland, which were largely bought up in this county about two years since. There were also a few horses shown, which were principally of an inferior description.

**At PENNYMUIR FAIR**, the number of sheep was computed at from 9,000 to 10,000, the greater part of which consisted of wedders; the demand, however, was not equal to that of the Rink on the previous day, with prices a shade lower, and a great many unsold

**THE WEST OF TEVIOTDALE AGRICULTURAL SOCIETY**, recently formed under the patronage of the Duke of Buccleugh, held the first meeting at Hawick: the show was excellent, especially of cattle. The head prize, (£10) for short-horned cattle was awarded to Mr. Turnbull, of East Middle; the second best to Mr. Brodie, Bedwell.—The Judges who awarded the premiums were, for the Short-horned Cattle, Messrs. Robert Ferguson, Muirhoselaw, Nicholas Dodd, Monklaw, and John Hunt, Thornington: for Horses and Leicester Sheep, Messrs. Ferguson, Hunt, and George Robertson Harperton; for Cheviot Sheep and Swine, Messrs. Thomas Thompson, Gottenshope; Thomas Anderson, Sundhope, and John Robson, Keilder-rigg-end; and for the Extra Stock, Messrs. John Biss Ogden, Harrierfield, and Nicholas Dodd Monk-law.—After the show, a party of 110 gentlemen sat down to an excellent dinner in the Town Inn, A. E. Lockhart, Esq., of Borthwick Brae, was in the chair, Mr. Grieve, Branhholm Braes, and Mr. Scott, of Wauchope, acting as croupiers.

The number of Sheep penned at Devizes Green Fair was much larger than at former fairs; and the sale far brisker than had been calculated on, at prices above those obtained at Weyhill. The cattle fair was thin; the price of good beef may be stated at from 8*s* 6*d* to 9*s* perscore. There were a great number of horses, but very little business was done.

**FALKIRK OCTOBER TRYST.**—The last and most important of the three trysts for the year, commenced with sheep on Monday the 12th inst. The number of sheep on the ground was computed at 35,000, and supposed to be much the same in extent as last year, although the number was then stated much higher, but we have the authority of the tacksmen of the market for saying, that generally the number has been greatly exaggerated in former years' reports. The weather, upon the whole, was favourable, the extensive field, Stanhouse Muir, (measuring 80 imp. acres), in the vicinity of the Carron Works, on which the market stands, was dry, and every way comfortable for the stock exhibited.

A number of English buyers were present. Considerable sales were anticipated, but not high prices, and the result of this day's market exactly turned out so. By 12 o'clock, a number of large lots which had been bought up began to leave the market, and others followed in quick succession; and by nightfall the greater part of this immense quantity had changed hands. Prices as follows:—Best white-faced wethers, top price 25*s*; current 20*s* to 23*s*. Black-faced wethers (from Glenochy) 21*s*, next best, 18*s*; current, 11*s* to 16*s*. Cheviot ewes, top 18*s*; current 15*s*. Black-faced ewes, top 13*s*; current 7*s* to 11*s*. The sales were all by the clad score. The prices realized were considered to be a shade better than the September tryst. The only description of sheep that remained unsold were ewes, and not to any great extent. The fall upon sheep at this market compared to last year, is considered to be 5*s* upon the best quality, and from 2*s* to 3*s* a-head upon the lower priced and inferior sorts.

Yesterday, the 13th inst, the cattle market commenced. The number was much the same as last year's October tryst, but very inferior in respect to condition. There were very few fat cattle in the market, these brought readily the Edinburgh market price. Prices of cattle, for feeding as follows:—100 head of Aberden-shire, three year old off, were sold by Mr. McCombie to an East Lothian Farmer at 10*l* 10*s*; best two year olds brought 8*l*; three year old Highland Stots 6*l* to 8*l*; two year old ditto, 5*l* to 6*l*. The demand was generally good, and the market was pretty well cleared of all descriptions and prices, upon the whole, a shade better than at the late markets, but from 20*s* to 30*s* a head below those of last year. The demand both for sheep and cattle, we believe, exceeded expectation, and heavy stocks have been moved off, although we fear not to advantage in point of profit.

For upwards of 50 years, wheat has not been known at so low a price as now in Liskeard market.—*Plymouth Journal*.

**CRIF MICHAELMAS MARKET** was well supplied both with horses and cattle. Fat beasts may be quoted at from 6s to 6s 6d per stone, Dutch. One lot of superior three-year-old stots brought 87 15s a head; inferior kinds from 27 10s to 57. Lean stock was but little sought after, a great number of which left the market unsold. Draught horses, of good action, brought from 207 to 267; inferior kinds from 107 to 157, while not a few sold at prices varying from 57 and under. The supply of young swine was great, and sold at from 2s 6d to 12s, according to age and quality.

**ASHBOURN FAIR.**—This fair was well supplied with sheep and cattle; lambs were not very numerous; good fat beasts were scarce, and not in great demand; the sale of sheep was not brisk, nor that of lambs. The show of horses was large, but mostly of inferior quality, and prices unusually low. Beef fetched 4½d to 5d, and mutton 5d to 5½d per lb.

**THE LAUDERDALE AGRICULTURAL SOCIETY** held their annual meeting on Thursday Oct. 8. The number and quality of sheep exhibited far surpassed any previous show there.

**At RINK FAIR, KELSO,** the show of Cheviot stock was greater than for some years past. The demand was tolerably good, and the greater proportion of the stock shown was disposed of. Good average lots of two year old wedders brought from 18s to 20s; ewes sold at about the same price, being a reduction on the price of last year of about 25 per cent.

**At AUCHTERARDER MICHAELMAS MARKET** the number of beasts brought forward was at least 2,000, and merchants were numerous; but they by no means gained the prices which the holders wished, although those offered were superior to that realized in many previous markets in the neighbourhood. The holders were obliged to give way, and a great deal of stock changed hands at perhaps 20 per cent cheaper than in this market last year. There were a few fat beasts in the market, which were immediately bought up at from 6s 6d to 5s per Dutch stone. There were some good horses brought forward, few of which were disposed of.

**LANARK TRYST.**—A very large number of cattle appeared in the market, consisting of every description of stock. Cows to calve within a month were much sought after, and such as were sold varied in price from 37 15s to 127. There were some fine queys, to calve in the spring, but they met with a dull sale. Year olds were numerous, but in small request. Half-fed beasts, ready for putting on turnips, were also plenty, but the demand for them was limited. Prices in general are on the decline. There was a good show of horses, and many of them changed owners.

**SALE OF COMPETING STOCK AT AYR.**—Mr. Rodger, Dalmorton, sold his Airshire bullock, which gained the 2d prize, for 50 guineas. Mr. Dunn of Blairston Mains, sold his pair of West Highlanders at 907. Mr. Kennedy, Lochlands, sold his prize Teeswater, with a cross between a Teeswater and Airshire, and two Airshire, four in all, for 1507. Mr. Muir, Factor to the Earl of Selkirk, sold a prize Galloway for 307. 5s, which weighed, fat and weight, 67 stones tron. Mr. M'Jannet of Drumshang, got 807, for his pair of Galloway prize bullocks; and 467 10s for his pair of prize West Highlanders. Mr. Wright, Woodlands, sold two bullocks of a cross breed between the Airshire and Galloway, to Mr. Arbuckle for 757. The Galloway prize bullocks which were roused, brought from 217 to 347 per head. Of the West Highland bullocks roused, the pair which gained the second prize, sold at 507. Of the others, the price per head ran from 257 to 307. The fat sheep were all sold. Mr. David Tennant, Hawkhill, sold his prize black-faced fat wedders at about 50s per head. The rest of the same description brought from 35s to 60s. Two fine breeding Leicester Tups, shown by Mr. Garratt, farmer, Northumberland, brought him an offer of eight guineas, which he, however, refused.

**METHVEN.**—A great many potatoe merchants have last week and this been lifting potatoes which they had lately purchased by the acre; they are generally paying from 127 to 187, and average from 307 to 387 bolls per acre. A farmer in the north-end of the parish of Methven sold one of his acres at the advanced rate of 247; the rest of his field sold at 207.

**HOPS.**—The Town Malling Agricultural Association Ploughing Match, will take place on the 30th. of October, when, independent of many others, the following premiums will be given:—

|                                                                                                           | £. | s. | d. |
|-----------------------------------------------------------------------------------------------------------|----|----|----|
| To the Hop Dryer whose Master shall produce the best managed Sample of Hops of his drying in class 1..... | 2  | 0  | 0  |
| The Next best ditto, class 1.....                                                                         | 1  | 0  | 0  |
| Best managed Sample class 2.....                                                                          | 2  | 0  | 0  |
| Next best, class 2.....                                                                                   | 1  | 0  | 0  |
| Best managed Sample, class 3.....                                                                         | 2  | 0  | 0  |
| Next best, class 3.....                                                                                   | 1  | 0  | 0  |

No successful candidate for any of the last mentioned prizes shall contend again for the same prize within three years.

No successful candidate in any other Association this year for any of the above prizes shall be allowed to contend for the same prize this year in this Association.

No Hop-planter to produce more than one sample of hops from the same Oasthouse—but if he have two or more Oasthouses with different dryers he may produce a sample from each.

No sample of hops shall be permitted to be shewn for a prize unless delivered to the secretaries, or one of them, by the Master himself, with an accompanying certificate in writing that it was drawn from a bag or pocket, which had been, or was to be offered for sale; and such sample and certificate must be delivered into the hands of one of the secretaries before ten o'clock on the morning of the 30th.

No sample of hops sent for a prize shall bear any name, number, letter or mark of any kind; or it will not be received.

The judges of the hop samples will be hop factors or hop merchants, to be appointed on or previously to the day.

There must be three competitors at least for each premium.

**PETERBOROUGH SECOND WOOL FAIR.**—The second wool fair was held at Peterborough, on Saturday, Oct. 3, as was appointed in July last, and though we are not able to report so favourably of the extent of business done, as we could have wished, yet there were several sales effected, which was not the case in July in a single instance. There seems a great opposition on the part of the buyers to this system of open market, and it will be seen that their hostility arises from their desire to keep up the monopoly inseparable from the common practice of visiting the growers about the country, and thereby keeping them in comparative ignorance as to the state of the market for their produce. The arguments in favour of an open market are very preponderating, and it only remains with the growers, by perseverance, to establish it in this city. At three o'clock a large company sat down to an excellent dinner in Mr. Dowes's spacious room, and the further arrangements in the wool fair were put in the hands of the committee.

**REAPING MACHINE.**—We (Stirling Journal) have pleasure in being able to state that Mr. Smith's Reaping Machine has been in successful operation during the two past weeks, and that its performances have given great satisfaction to all who witnessed them—The cutting and laying are correctly and uniformly executed, and the gathering into a neat sheaf is considered easy and expeditious. The machine cuts a breadth of from five feet to five feet six inches at a time, and a couple of horses move it easily at a rate of three miles an hour. The alterations which have been introduced in the construction of the machine, this season, have made it very complete, whilst its original simplicity has been but little invaded.

**CHELMSFORD.**—A ploughing match under the auspices of the Chelmsford Agricultural Society took place upon the farm of Mr. Jos. Crush, at Mountnessing Hall, on Monday last. The judges, Messrs. Joslin, Wood, and Alger, pronounced the work to be well executed, and decided the prizes as follows :—

| CLASS I. |                  |                                   |
|----------|------------------|-----------------------------------|
| Prize.   | Name.            | Residence.                        |
| 1.       | Wm. Johnson..    | Wm. Moore.. Mountnessing.         |
| 2.       | John Girkin ..   | Chas. Foakes . Ramsden.           |
| 3.       | Chas. Sorrell .. | Chas. Foakes . Ramsden.           |
| 4.       | Wm. Wybrew ..    | Thos. Bridge . Buttsbury.         |
| 5.       | John Barnes ..   | Joseph Crush . Mountnessing.      |
|          | John Marsh ..    | Joseph Crush . Mountnessing Hall. |
|          | John Marsh ..    | Joseph Crush . Mountnessing.      |
|          | James Clarke..   | Joseph Crush . Mountnessing.      |
|          | John Ellis ..... | William Crush. Great Burstead.    |
|          | James Dennish .  | C. Grant, Esq. Thoby Priory.      |
|          | Joseph Gilby ..  | Joseph Crush . Mountnessing.      |
|          | Ed. Harwood ..   | Chas. Foakes . Ramsden.           |
|          | Thomas Stubbs    | Henry Woods . Ingatstone.         |
|          | Saml. Sweeting   | C. Grant, Esq. Thoby Priory.      |

**CLASS II.—BOYS.**  
1. Robert Tyler .. Wm. Crush .. Great Burstead.  
John Barnes received 3s 6d in addition to his prize, having completed his task in the least time, and would probably have received a higher prize had he not ploughed quite so deeply. Ellis's work was commended, but was too fleet. The unsuccessful in the first class were rewarded with half a crown each. Two other ploughs arrived too late to be suffered to compete in the class, but the men having ploughed their stiches, a small sum was collected for them in the field.

**'CONE WHEAT.**—This article is a light red, hard grained wheat. It grows taller than the Lammas kind, and shows a beard not unlike rye. Various millers and bakers consider it essential to use a portion of it, let the price be what it may. In addition to being stronger, it also possesses the quality of making the bread keep longer than any other variety in use; but great skill is required in the manufacture and the grindstones used must be close, hard, and smooth. There are two kinds of wheat that take the name given; that is the blue and the white cone, and most persons consider the bread made from the latter superior to any other. On the stiff clayey soils of Gloucester and Somersetshire, this wheat has been cultivated to a considerable extent for a number of years; and a great deal of it is grown in the south of France, and more particularly on the banks of the Loire, and Garonne. At Adour, where it is also cultivated, the produce in favourable seasons is sometimes enormous—amounting to sixty, seventy, and even a hundred imperial bushels per English acre. It has been seen in that neighbourhood twelve feet high, and some of the stalks more like canes than ordinary wheat straw. The French make from it their best flour, which is very fine. The price is 42s the imperial quarter, and the general weight is 62 lbs. per bushel.

## MEETINGS OF AGRICULTURAL SOCIETIES, ASSOCIATIONS, CATTLE SHOWS, &c. TO COME.

[We shall feel obliged to such of our readers as will forward to us any local newspaper containing the announcement of annual meetings, for insertion as below.]

South Suffolk Agricultural Association, Sudbury, Nov. 3.  
Exeter Agricultural Society, Nov. 5.  
York Agricultural Association, Nov. 14.  
Rutland Agricultural Society, Dec. 1.  
Yeovil Agricultural Society, Dec. 4.  
Chippinham Cattle Show, Chippinham, Dec. 11.  
Smithfield Club, Dec. 11.

## LIVERPOOL, OCTOBER 20TH.

Since our *Annual Harvest Circular Letter*, dated 21st October, 1834, we have continued our best endeavours to communicate to our friends, correctly and candidly, the transactions in this corn market, by an uninterrupted series of weekly letters, every Tuesday, in which we have occasionally made such remarks on the prospects thereof as we deemed likely to be useful, and in those of the last three months, a record of the weather, and consequent progress of harvest—the result of which, in this district, might have been pretty correctly stated some weeks earlier, but considering this of less importance, we have postponed this letter for the purpose of obtaining more extended information by carefully investigating the contents of letters on the subject of the recent harvest from almost all the influential corn districts in the United Kingdom.

A general feeling prevailed that we should this season have had a very early harvest, but it has not proved much more so than the two preceding ones; it commenced in the southern districts of England—partially in this one—and in the *forward* situations throughout the whole kingdom about the first week of August, and was completed with upon the whole most favourable weather, by the second week in September; but throughout the north of England, Scotland, Wales, and the Isle of Man, it commenced two weeks later, and the operations of harvest were very often impeded by heavy rains, by which the crops of all grain are reported to have suffered considerable injury, and the weather has this season been very unfavourable throughout the whole of September and the first fortnight of this month for saving the crops in backward situations.

On the subject of the recent harvest, reports are various, but the opinions expressed by those on whom we have been accustomed to rely are less so than usual; in the great influential corn districts of England to the south of this, particularly in those on the South-east coast, where last year the crops of wheat, (*reported then very good*) have since been proved to have much exceeded full averages, the weather this year appears to have been cold, stormy, and unfavourable for the crops of wheat at the critical period of blooming, and immediately afterwards to have become very hot—forcing into premature ripeness; and although their crops of every kind of grain have been secured in the best possible condition, the crops of wheat are reported very deficient in quantity and quality, compared with those of last year generally; although on several farms in the various counties of England, and also in this district, the quality never was better, complaints of its proving deceptive, and yielding much less from the straw than usual, are very general: to the northward—throughout Scotland, Ireland, Wales, and the Isle of Man, although they have been much annoyed by the rain, and have had a more tedious harvest, reports generally are favourable as to quantity, but of the quality of their wheat they are very various; considering that there has been a reduction in the breadth of land occupied with wheat this season—still more so in the north of Ireland, where it is estimated upwards of 50,000 acres formerly wheat have been appropriated to flax, we unite in opinion with many of our respected neighbours, that although the crops of wheat throughout the United Kingdom are decidedly deficient from those of either of the two last years, they will not prove far short of a fair average in quantity: of barley, oats, beans, and pease, reports are every where favourable—they are full averages in quantity and quality generally, and excepting in backward situations, they have been saved in excellent condition; hay has been an abundant crop and well saved; of potatoes reports are not generally favourable, neither as to quality nor quantity, but the result of this very important crop is not yet fully ascertained.

From most of the corn provinces in the north of Europe accounts are favourable of the crops generally; from Canada not so favourable; but all supplies from those are contracted to the United States, by a reported deficiency in their crops of wheat, and very little wheat

or flour is expected to be exported to this kingdom from Canada this season.

The stocks of grain *here in bond* on the 1st October instant, were about 116,000 qrs of wheat, about 108,000 brls of flour, chiefly sour, about 4,500 qrs of oats, and about 1,500 qrs of peas, exclusive of Canadian wheat and flour, which although in bond we consider free.

The stocks of *foreign grain and flour in bond* in the United Kingdom on the 5th September, 1835, were about 579,275 qrs wheat, 79,440 qrs of barley, 342,083 qrs oats, 3,476 qrs rye, 1,622 qrs beans, 4,847 qrs peas, and 159,654 brls of flour. The prospect of any change in the corn laws, or of any relief to the holders of *bonded grain*, appears very dubious—on this subject there are some remarks in the first page of the *Mark Lane Express* of the 12th October instant well worthy of the attention of all interested therein.

We now annex at the foot of this letter, a statement of the imports of grain into this port for a long series of years, up to the 1st of October in each year, which we have long been in the practice of extracting weekly from authentic sources, and making up with every personal attention as to its correctness; it will be observed that there is a great deficiency in the imports of wheat and oats from Ireland this year (in which are included those passing up this river direct to Runcorn) compared with those up to 1st October, 1834, and they are still more considerably diminished from those in the three preceding years—nor is this deficit made up by the small increase on the imports of flour and oatmeal, nevertheless the stocks of *free wheat* here, including the Canadian, free and in bond, are estimated nearly equal to those at this period last year—about 140,000 qrs—of oats, oatmeal, barley, beans and peas, they never were less—they are almost exhausted, and of malt they are very small.

To account for our stocks of wheat here, (which under other circumstance we should not consider large,) with such miserable prices—and such diminished imports from Ireland during the last two years, we may remark nearly as in our letter this time last year; the demand for *wheat* from this port has been confined in the most unprecedented manner to a very small district around us; the principal millers and dealers beyond Manchester and Preston, towards Yorkshire, and even in those towns and their vicinity have been fully supplied with *wheat* by imports through the river Humber into Wakefield and Leeds, and by the canals from the southern interior counties; for low as our

prices have been here, they have been even more so, proportionably, in Yorkshire during the whole of the last season, and the quality of the wheat there has been better than ours; the prices of wheat throughout the kingdom are lower than at this time last year by about 5s per qr, and lower here by about 6d per 70 lb!—lower than ever remembered in proportion to qualities!!—even in the autumn of 1822! and we have not now as *then* large stocks of wheat of the wretched quality of 1821 forcing on our market at 3s 6d to 4s 3d per 70 lb, nor have we now as in 1832, a large portion remaining on hand of the importation of fully two millions and a half quarters of foreign grain, and 700,000 brls of flour which had been released for home use in England, (the flour chiefly in Liverpool,) during the two preceding years; the ruinous depression which has so long prevailed in the value of wheat, so much below its cost of production, may therefore be considered unprecedented, and hardly warranted by any estimate of increased cultivation, or even by the extreme poverty of the farmers generally, which however may still continue to effect our markets for some time, as from the low prices, larger quantities are of course requisite to make up their Christmas rents; all other kinds of grain have borne and still bear a much higher proportionate value than wheat, the consumption of which has been very great for human and for cattle food and for distillation, and must so continue, the immense population throughout this great manufacturing district being in full employment and with fair wages; and the kingdom being now completely clear of all remnants of foreign wheat—deprived of all prospects of imports from Canada—the condition of the crops in backward situations likely to be so different from those of the last two years—with the doubtful crops of potatoes, fully justify the confident expectation that a material increase in the value of wheat will occur before another harvest, and that the average prices of the past season will be greatly exceeded—although on all other grain they may be diminished for some time, and they certainly will not bear so high a proportionate value to wheat.

The imports of *new grain* from Ireland have been generally hitherto in no condition to keep, and have been forced off, on arrival, ex-ship; but it may shortly be expected to arrive in better prepared condition, and probably will become an object of speculation, for which purpose some quantity of *old wheat* has already been taken.

SCOTT & PARKE.

#### GENERAL IMPORTATION OF GRAIN AND FLOUR INTO LIVERPOOL FOR TWENTY-SEVEN YEARS.

Besides the above mentioned Imports into this Port (in which are now included those which pass up this river direct to Runnymede) from the 1st October, 1834, to the 1st October, 1835, we have had about 176,820 sacks of Oatmeal from Ireland, being an increase on those of the preceding year of 32,720 sacks.

## REVIEW OF THE CORN TRADE IN MARK LANE, DURING THE MONTH OF OCTOBER.

The sudden change in the weather towards the close of the harvest in England, and the prevalence since that period of wet, has proved extremely injurious to the crops of grain throughout Scotland, where heavy rains have been experienced for several weeks. The growth of wheat, taken generally, is below an average, though, perhaps, equal in bulk to the crops of last season, and inferior in quality. The cold ungenial weather experienced in spring checked the growth of the plant, which in many districts, particularly those in a more northerly direction, did not fill well in the ear, besides being thin on the ground, and when the grain arrived at maturity, the rainy weather caused it to be housed in bad condition, yielding a rough, damp, irregular sample, in many instances infected with smut, and much discoloured, besides being sprouted, though this latter defect has not advanced to the extent it otherwise would have done, had the weather proved warm and muggy, instead of being cold and windy. Old wheat, of which there still remain stocks in the farmer's hands, is, therefore, in request, in order to admix with the new finer qualities maintaining a higher relative range of price; purchases also of sound dry corn are being effected on our coast for shipment to the north, as the winter must be advanced before the greatest portion of the new wheat can be made available to the millers. Bere and barley, in some instances, particularly in the more southerly portions of the kingdom, have been secured under more favourable circumstances, but the bulk of the crop has suffered likewise from the inclemency of the weather, much being sprouted and stained. The quality, therefore, is various, much being deteriorated, and fit only for distillation and grinding, and though the crop on the whole is a full average, yet the brewers will have to look to England this season for part of their supplies of malting qualities. Oats, which are the chief produce of Scotland, have disappointed the anticipations of the growers. In June and July the promises on the ground were highly flattering, but the excessive drought of August caused a prematurity in the ripening and want of fulness in the ear, and before the crop was harvested most of it was more or less damaged by the wet. The sample is, in consequence, stained and dark in colour, and shipments generally cannot be expected before Christmas. Some parcels are yet in stook, and others, as is also the case with barley, heating in the stacks, and being rendered inferior in quality and yield. The produce is, however, calculated at a moderate average, with much of the corn heavy in sample. Beans, in many instances, have grown too much to haulm, not podded well, and will be a de-

fective crop. Peas being mostly sown on light lands have suffered from the dry weather, and will be short in the produce, though of better quality than beans.

During the past month the wheat trade has afforded the farmer little relief from that continued depression which has characterised the proceedings in Mark Lane for a lengthened period; the last week's average of the kingdom having exhibited a greater decline in the price of corn, than has been experienced for more than half a century, the aggregate price not exceeding 36s 11d per qr., equal to 35s 10d Winchester measure, on a quantity amounting to 93,753 qrs; the largest return being from Yorkshire, which comprises 17,740 qrs sold at an average of 36s 10d. Lincolnshire being the next most important on the list, consisting of 8,469 qrs at 35s 5d; the lowest rates being from Oxfordshire, which were 34s. The trade at all the leading country markets has likewise evinced a tendency to recede, as the supplies generally have been liberal of new wheat. In the London market the samples continue to exhibit much desparity in the quality, and the damp state of the atmosphere during a portion of the month has affected the condition of the grain, causing much variation in the currencies. The finer qualities have receded fully 1s per qr., and the secondary and inferior descriptions 2s to 3s. At the beginning of the month an accession of wind and water, caused the mills to get into operation, and the millers purchased freely; though many of the cargoes which have arrived, have gone direct into the hands of the manufacturers. The unfavourable accounts also from Scotland as noticed above, and some purchases made for shipment to the North of England prevented any immediate depreciation in the currencies. Towards the middle of the month, however, the supplies of Flour beginning to augment, and the millers apprehensive of large receipts both of the article as well as wheat, and being partially in stock for immediate operations, became reluctant purchasers, and prices in consequence receded until the close of the month as before referred to. For bonded wheat an inquiry has existed for shipment at low prices, say from 20s to 22s per qr., at which rates, Mecklenburg and other wheats have been sold.

Though the supplies of flour coastways were large in the early part of the month, yet the trade being quite bare of stock took off the samples offering at the previous rates; the arrivals however continuing, the demand became languid, and prices receded, the article being fully 1s to 2s per sack lower; best Norfolk selling at 28s to 29s. Town made qualities have remained nominally unaltered, though 36s may be considered the top quotation. For bonded flour

there has been a free demand for shipment to the West Indies, weekly exports taking place to most of the Islands; owing to the advance in the American markets, and the shortness of the supplies, preventing the usual receipts from the United States.

The alterations which have taken place in the averages consist of an increase in the duty on wheat of 3s, making the duty 49s 8d: 3s also on oats, leaving the duty 16s 9d, and 5s 9d on beans, the duty being 18s 3d; but on peas the duty has decreased 2s 9d per qr.

Barley has considerably increased in supply, but the samples exhibiting a great disparity of quality, the maltsters have been obliged to select their parcels with care; at the beginning of the month prime Chevalier and fine common runs of malting barley forming a small proportion of the arrivals, realized rather more money, but as October advanced and the receipts augmented prices receded; Chevalier being noted 1s, other malting barley 1s to 2s, and distillery and grinding sorts fully 2s lower. Some of the new samples are extremely heavy, weighing 57 to 58, and even 59lbs; it is stated some are to be found of 60lbs per bushel. New barley has been offering from Ireland on low terms, varying from 9s to 11s 6d per barrel as in weight. Rather an extensive demand has existed for bonded barley at from 12s, 13s, 14s to 16s per qr. for shipment, principally to Norway and Sweden.

The maltsters have found the new barley to yield a more tender and kindly description of malt than was at first anticipated, and the article has become saleable at the quotations; old qualities, except fine, meeting with little attention; prices have remained steady throughout October.

The importation of oats from our own coast, as well as from Ireland, is fast increasing, and consists almost entirely of the new growth. From Scotland the receipt have been very trifling. In the early part of the month foreign samples composed the bulk of the samples offering; but an influx of the new British growth coming upon the market, materially depressed the trade, and as the quality of the English was heavy, and many fine parcels appearing among the Irish arrivals, they commanded the market, unless the foreign corn was extremely fresh. Old English, Scotch, and Irish grain has been extremely scarce and suffered little depreciation. New oats on the contrary have gradually declined, and are now 3s 6d to 4s per qr. lower than at the first of the month. New Irish oats weigh on an average from 40 to 42lbs, and are decidedly preferable to the run of last year's growth; those of 42lbs are worth 21s to 22s; some clean, dry, stout, and superior made 23s. The new Scotch, some weathered and discoloured, are very difficult of disposal; quality of 42lbs in tolerable condition, but not stout or even, have been sold at 21s to 22s, and some damp of 40 to 41lbs, at 19s to 20s. Old Scotch potatoe oats are worth 27s 6d, Angus 23s 6d, and bright, dry new might make within 2s to 3s of these rates. An extensive free on board trade has been transacted in Irish grain. Limerick oats have been selling at 9s 6d to 10s; Waterford, 9s 9d to 10s 3d, and 10s 6d; Galway, 9s to 9s 6d. The former two, weighing 40 to 42lbs, the latter 38lbs. Holders in Limerick and Waterford, at first steadily demanded 9s 9d to 10s, purchasers offering only 9s 6d; prices having since advanced, and the quality proving good, 9s 9d to 10s has been paid; but by the later accounts from Water-

ford, the best qualities are noted still higher, say 10s per barrel green. In bonded oats little business has been transacting. Archangel qualities have sold at from 6s 6d to 8s 6d per qr on board. Brew oats are held at 13s to 15s.

Old beans have become extremely scarce, and have advanced 1s to 2s per qr; new beans, which come in excellent condition, have also advanced 1s per qr, and been in request for shipment to the north of England. Windsor beans have declined fully 2s per qr, and become very unsaleable at 29s to 32s; Longpods have also receded 1s to 2s per qr, and are now noted at 28s to 31s per qr.

White peas have continued in fair demand, and good boiling qualities have improved 1s to 2s per qr, but hog and maple descriptions are 2s to 3s per qr lower as well as blue peas.

During the month of October, the following quantity of grain and flour has arrived in the port of London:—

In France the farmers are generally complaining as to the quality of the new wheats, which they find much inferior to the growth of last year; the better qualities of corn are bearing a higher proportionate value to those of secondary description, and are in request for seed. In barley there is also much disparity in the quality. Oats continue to maintain their currency. At Marseille the better sorts of wheat were also in demand, but the shipments this season from the Loire, will, it is expected, turn out fine, as the samples exhibited have given very general satisfaction. Prices generally are ruling low, and are more depressed than for a series of years, the last general average of the kingdom not exceeding 30s 5d per qr. In many places the after-growth of artificial feed is weak and rapidly fades off, and the natural pastures, from the shortness of fodder, have been so much trodden down and depastured, which added to the wet, caused them to afford less nourishment than if even dry weather had prevailed. The prices of cloverseed, owing to the rains having excited apprehensions for the fate of the crops, have considerably advanced, not only in the northern departments, but in the districts of Beauce, Poitou, and the more southern departments; and though a few fine days had caused the currencies partially to recede, yet the deficiency in the crops, and the little remaining on hand of the growth of last year, is sufficient to have caused a re-action in the market. Fine qualities continue to be held at 48s to 50s, with few purchasers; other sorts, from 42s to 46s per cwt. as in quality, and there are buyers of the better description at the latter price. The quantity that is disposable is very limited, and holders prefer waiting the demand for the consumption, rather than quitting at the present rates. Lucerne is also improving in value and may be reckoned 20 per cent dearer during the past month: the crop is only of middling quality. At Rouen, samples of Cloverseed were offering more freely, with rather a diminished demand, the article being noted at 44s to 46s. From St. Malo we learn that Cloverseed was in active request, and scarcely 50 bales remaining in the market of the crops of 1834, and as growers were fearful of experiencing a want of the article, owing to the failure of the new growth, they

scarcely knew what rates to demand; 48s had been offered in vain, and it is stated, the accounts from Lower Brittany contain similar reports. From Sables-d'Olonne seed is noted at 48s, but none offering as the crop was almost totally deficient. At Nogent-le-Retron, little business has been transpiring in Cloverseed; old seed is preferred to new, as being superior in quality; prices are 42s to 44s.

The prevalence of the Cholera in Italy prevented in the beginning of the month any attention being directed towards the transactions in grain beyond the demand necessary to meet the local consumption; as the effects of the disease, however, mitigated, the markets, it appears, have been over-supplied with wheat, and are extremely dull, and the currencies depressed. At Naples, Barletta samples have been ruling lower than for some years past; the best descriptions were to be obtained at 21s, but prices have somewhat rallied, and a few purchases have been made at 22s to 23s for Algiers. Speculators in the Mediterranean have little chance of any profitable business in wheat, as the abundance of the supplies, added to the shipments ready to be made from the Black Sea, completely paralyzes the trade, and effectually checks any chance of improvement. At Trieste, the result of the harvest in the province, though abundant, has turned out inferior in quality, which causes fine samples of wheat to be in request at rather better prices.

In Holland a royal decree has imposed a heavy duty on the admission of foreign grain in the proportion of 66 florins 60 cents. on wheat per last; 24 florins 30 cents. on bran and rye; 17 florins 40 cents. on Barley; and 19 florins 30 cents. on Oats. The partial exclusion of future foreign supplies has had the effect of giving a temporary excitement to the corn trade, and free foreign and native wheats have advanced 2s to 4s per qr; Rye, 2s to 2s 6d; and Barley, 1s to 1s 6d per qr. The measure, however, has given great dissatisfaction to the trade, being, no doubt, very prejudicial to business, as it will eventually be found to be to the very interests it is intended to protect.

At St. Petersburg, it appears, that the first supplies from the country of grain and meal had been received, the latter only amounting to 200,000 kuhl. In consequence of the shallowness of the water, it is stated, from Wischny Wolotschok, the place where the barks assemble, that the opening of the sluices and floodgates on the rivers has been much retarded, and it is expected that the second caravan will not reach the city before winter, and the third supply will be detained until some time after the frost. The monthly consumption of the city is estimated at 50,000 to 55,000 kuhl. The government expect their first supplies by the second caravan; the private granaries are cleared out, and in the neighbourhood the cultivation of grain is limited, and what is grown has yielded badly. As far therefore as the season has as yet advanced the city is very scantily supplied. In addition to which the old government stores of foreign meal are exhausted, and any restriction on the free entry of foreign wheat not to be anticipated; mixed Holstein wheat of 1833, and 1834, has obtained 31s, a quality of 1833 has been sold on delivery at 30s 8d, and dried Pomeranian has obtained 32s. No correct information is as yet ascertained, as to the general result of the harvest in Russia. The supplies of wheat having augmented, the trade is rendered less animated, though good qualities are worth 30s 4d to 31s per qr. Rye is scarce, and would readily obtain 27s 8d to 28s. Barley is nearly exhausted, and fine qualities would realize 20s 6d. Linseed was held at 40s 11d to 43s 9d per qr. At

Riga Linseed has continued saleable from the barks at 23s 9d to 42s 4d, as in quality. Of hempseed there were hardly any sellers at 27s 11d, half a rouble more money being demanded. Courish wheat is nominal at 23s 7d to 27s 11d; barley, 18s 7d to 19s 2d; oats, 12s 10d; rye, 23s. At Danzig, the increase of arrivals and want of demand, kept the currencies very depressed, fine fresh high mixed wheat remaining at 26s to 27s, weighing 62lbs, and high mixed 25s to 25s 6d. The last year's growth is to be obtained at nearly the same rates. Rye had advanced to 17s, owing to orders from the interior, but as the supplies would no doubt be large, price was likely to recede. The cultivation of Rapeseed appears much increasing, and the home crushers have taken off all the new growth. The merchants at Danzig, and indeed all the lower Baltic Ports are complaining of the arbitrary measures adopted by the King of Holland, respecting the admission of foreign grain as being extremely detrimental to their trade, as the low qualities of wheat which were sent to Amsterdam, cannot pay so high a duty as 66 florins per last, in addition to which, the sudden mode in which the resolutions have been promulgated, have prevented speculators from having any chance of retrieving themselves. In Mecklenburg the crops have been much injured by the drought, and by the gales of wind. Wheat is barely an average crop, barley deficient, oats have failed to the extent of one-third, but rye and peas exceed an average growth. The potatoe crop will to all appearances turn out very deficient, and as there will be no second crop of hay the farmers, who generally have a large stock of cattle, will be under the necessity of feeding upon grain during the winter, which may, it is conjectured, in some measure, equalize the want of a foreign demand. At Rostock and Wismar wheat may be purchased at 20s. In Denmark the trade remains dull and depressed, and with the exception of tares and rapeseed, of which latter article a very limited stock is remaining on hand, very little doing in any description of grain, except for the local necessities. At Hamburg the trade generally is extremely heavy, and wheat, with the exception of Magdeburg, Marks and Mecklenburg qualities, to be obtained on lower terms. Rapeseed remains firm at 34l to 35l.

The flour as well as the grain trade in the United States of America remains firm, and in some instances improving, owing to the shortness of the stocks. At New York, North Carolina wheat obtained 48s 4d per qr; Genesee ditto, 47s 8d; Western Canal flour, 27s 7d per barrel. North River barley, 30s 10d to 32s 1d; Northern oats, 21s 10d; Southern ditto, 15s 4d. At Philadelphia wheat sold at 47s 8d to 48s 4d. Flour, 28s 1d. At Baltimore wheat obtained 45s to 46s 6d; prime samples, 47s 8d. Flour 28s 1d per barrel.

In Canada the trade remained extremely languid, white wheat at Montreal was held at 5s 6d per 60lbs. and mixed at 5s 3d for Upper Canada quality, Lower Canada red being noted at 5s. The business transacting in new wheat on delivery was very limited, as much disparity was expected this year to exist in the sample, and the condition of the grain being also much affected by the wet weather.

In New South Wales and Van Diemen's Land prices of wheat had further advanced by the last advices of the 18th of June. At Sydney the last quotations received at Hobart Town and Launceston were 8s to 10s per bushel for wheat, in consequence of the want of supply, which had caused an advance in the latter Towns of fully 1s per bushel, wheat being noted at 7s to 8s per bushel. Barley was quoted at 5s; oats 3s to 3s 6d.

### FRENCH CORN AVERAGES.

(From the Times.)

The following are the average prices of wheat in France at the end of September in each year during the undermentioned 17 years, from 1819 to 1835 inclusive, according to official returns; the whole reduced into English measure and money:—

| Per hectolitre.<br>f. c. | Per qr.<br>s. d. | Per hectolitre.<br>f. c. | Per qr.<br>s. d. |
|--------------------------|------------------|--------------------------|------------------|
| 1819..16 1               | equal to 36 8    | 1828..21 9               | 48 3             |
| 1820..19 40              | 44 5             | 1829..20 13              | 46 2             |
| 1821..16 9               | 36 10            | 1830..21 92              | 50 3             |
| 1822..16 62              | 35 9             | 1831..21 71              | 49 9             |
| 1823..15 41              | 35 3             | 1832..19 44              | 44 6             |
| 1824..14 53              | 33 4             | 1833..15 86              | 36 4             |
| 1825..15 22              | 34 10            | 1834..14 64              | 33 7             |
| 1826..15 21              | 34 9             | 1835..13 66              | 31 3             |
| 1827..18 31              | 42 0             |                          |                  |

The average of the whole period is 17f. 31c. per hectolitre, which is equal to 39s 8d per quarter; and it will be remarked that the average of the present year is the lowest of the whole period,

In order to make a fair comparison between the average prices of corn in England and France, the mode of taking the average of each country respectively must be had in consideration. The ancient practice of England and Wales was to make up the average from the sales made in the maritime districts only, and all Irish and Scotch corn was excluded from the account; but in the corn law of 1828 it was enacted, that not only the sales of corn in the inland markets of England and Wales, but that the Irish and Scotch corn should also enter into the average, and these alterations have the effect of depressing the average price of wheat, as compared with the period anterior to 1828, at least 5s. the quarter, and in proportion for other grain; and therefore when the average price of wheat is now, for example, stated to be 40s per quarter, this under the former mode of taking the averages, would be 45s the quarter, all which must be borne in mind when we compare the average prices of corn subsequent to 1828 with those before that period.

The French averages on the contrary, for the whole of that large and populous country, are drawn up from the sales made in the very small number of only 26 places, and these, for the chief part, capital towns and cities; and this has important results, for, first, it is certain that the corn consumed in large towns and cities will be much superior to the average quality of the whole country, and next, it is equally certain that the price, whatever the quality, will be higher than in the places of growth in the interior, because the corn comes loaded from thence with charges of transport.

Wherefore the mode of taking the averages in France tending to show a high price of corn, and the mode of taking the averages in England tending, on the contrary, to show a low price of corn, this establishes a great difference in the respective results; under a sober and impartial view of things, it is plainly impossible to estimate this difference at less than 10 per cent.

There still remains to take into the account the quality of the corn of each country respectively. Now, the best bread at Paris, and in the large towns in

France, is better than the best bread in London and the large towns in England; and the best flour at Paris and in the large towns in France is better than the best flour in London and the large towns in England; and, therefore, the best French wheat is better than the best English wheat; and, therefore, the average quality of the wheat in France is better than the average quality of the wheat in England; and if it be then considered that the Scotch, and particularly the Irish wheat, is greatly inferior to the English, there will be no difficulty in coming to the conclusion that the average quality of the wheat in France surpasses that of the United Kingdom at least 10, and probably 15 per cent.

There being, then, 10 per cent. difference in the quality, and a further difference of 10 per cent. in the mode of taking the averages, it is clear that, supposing the official average price in each country to be the same, yet the price in France would really be 20 per cent. lower than in England. And this is confirmed by the fact; for the proportional difference between the price of bread at Paris and in London is generally greater than between the price of wheat. Thus, for example, the highest quotation of wheat of the first quality at Paris is 22f. 50c. the 1½ hectolitre, which answers to 34s 4d the quarter, and the highest quotation of wheat of the first quality in London is 45s the quarter. On the other hand, the highest price of white wheaten bread of the best quality at Paris is 55c. the 2 kilogrammes, which is something less than 4½d the loaf of 4lb English weight, while the best quality of white wheaten bread in London sells for 7d. the loaf of 4lb. And therefore the difference between the price of wheat at Paris and in London is 31½ per cent., while the difference in the price of bread is 47½ per cent., and yet it may very safely be stated that the Paris baker makes to the full as great, if not perhaps greater profits, than the baker in London; and this disproportion between the price of wheat and the price of bread arises entirely from the superior quality of the French wheat, for good wheat will not only produce flour of a better quality than wheat of an inferior description, but it will also yield a greater quantity, and therefore, supposing the French and the English miller to pay precisely the same price for wheat in the respective markets of London and Paris, the Frenchman can afford to sell his flour cheaper than the Englishman, and yet make the same profit, because from the same quantity of wheat he obtains a greater quantity of flour.

Again the French wheat yielding not only a greater quantity of flour than the English, but this flour being also of a better quality, and as from good flour not only better bread may be made, but also more bread than from an equal quantity of flour of an inferior description, so is it of plain direct consequence that the French and the English baker both paying precisely the same price for flour, the first could afford to sell his bread cheaper than the last, and yet make the same profit, and this by reason that from the same quantity of flour he obtains a greater quantity of bread.

The final result, therefore, is, that from the superior quality of the French wheat, as compared with the English, the bread at Paris is not only of a better quality than in London, but as compared with the price of wheat it is also at a proportionably lower prices.

## CORN AND FLOUR TRADE.

*(From the Times.)*

It appears that persons engaged in the above trade, have for some time past been making representations to the Government on the subject of allowing the manufacture of foreign corn into flour for export. It is presumed that some members of the Government, and particularly the Board of Trade, are favourable to the measure, but that much opposition to it is expected from the agricultural interest.

The principle proposed to be acted upon is, that for every specified quantity of foreign wheat delivered out of bonded warehouses there shall be a commensurate quantity of flour and biscuit returned within a limited time. To effect this, it is not conceived to be necessary that the produce of the identical parcel of wheat taken out of bond should be returned, provided the quantity of wheat liable to be brought on the English market does not exceed that which will be taken out of it. With regard to the quality of the flour and biscuit to be exported, the only essential point appears to be, that it shall be in every respect wholesome human food such as is commonly used on board merchant ships, or in our colonies.

This would be more beneficial to all parties than a nicer definition, since it sometimes happens from accidents of weather, &c., that there may be a considerable quantity of English wheat not well adapted for loaf-bread, which would yet make very good biscuit. If, then, a quantity of this description of wheat were taken out of the English market, and an equal quantity of better quality of foreign wheat brought into it, the effect would be that the farmer would be relieved from an unsaleable article, and the public have the advantage of better bread.

Still if it be made a point of, that the quality of the flour and biscuit to be returned into bond shall be more strictly defined, the criterion might be the flour and biscuit usually made for the navy.

To guard against fraud, it is proposed that the operation, as far as regards the exchange of wheat for flour and biscuit, shall be under the superintendence of the Customs, and confined to the principal sea-ports, in the following manner:—On timely notice being given that a certain quantity of a specified cargo of wheat is wanted to be manufactured into flour or biscuit, the party making the application shall, with another responsible individual, give security by bond, to return into bonded warehouse within a limited time a certain quantity of flour and biscuit, or of flour or biscuit only, as the case may be, for the purposes of exportation, instead of the specified quantity of wheat so liberated; otherwise, if it should be deemed more satisfactory, the biscuit and flour may be deposited into bonded stores, and sufficient time allowed for its being examined and approved of previous to the delivery of the wheat.

The officer of the Customs may be at liberty to call in tradesmen to inspect the quality of the flour and biscuit to assist his judgement of quality, and if he should reject it, and the owner of it be dissatisfied with his decision, an appeal may be made to the collector of the Customs, whose decision shall be final.

Those regulations, it is presumed, would effectually prevent any liability to fraud, which, however, might still be subject to penalties provided in similar cases. So far would this system be from injuring the agriculturists, that it would be of positive advantage to them, inasmuch as it would bring into active operation a large capital now lying dormant in foreign corn, and also by bringing back a branch of trade once enjoyed, but now lost to this country, through the operation of the existing corn laws; it would do away one of the causes of complaint made against them, and show that the agriculturists do not desire to interfere with other interests beyond what is necessary for their own protection.

It must be borne in mind that the benefit to be derived from the plan ought not to be confined to the corn now in bond, but be of a permanent nature. That it can be carried on to great advantage is obvious from the fact that wheat can often be brought from the Bal-

tic and laid down in England at a less price than it bears in America, which annually exports upwards of 1,000,000 barrels of flour, besides a large quantity of biscuit, chiefly to our West India islands and South America.

The system would necessarily give freight to our shipping, both in corn from the Baltic, and flour and biscuit to the West Indies, Newfoundland, and South America, &c. and would afford additional employment in this country to a great number of millers, bakers, coopers, bag-makers, &c.

The foregoing plan would have the recommendation that it may be carried into effect with very little increase of expense to the Crown.

Should doubts be entertained as to the working of such a system, the experiment might in the first instance be made on the wheat now in bond, the capital in which, amounting to a million and a-half of money, is rapidly sinking by expenses of warehouse rent, labour in preserving it, interest of money, and general deterioration in quality.

## THE BUCKINGHAMSHIRE AGRICULTURAL DINNER.

*(From the Courier.)*

The farmers and agriculturists of the county of Bucks had a dinner the other day at Aylesbury, at which Lord Chandos was present. Whatever may be thought of the politics or projects of those who associate at these meetings, they have the good effect of bringing the higher and middle classes together on friendly terms, of diffusing a spirit of kindness and good-will, and of making each party aware of the views and prejudices, and interested in the welfare of the other. No great proprietor who, like Lord Chandos, the Duke of Buccleuch, and a few more, meet their tenants in a frank, social way, without assuming any patronising airs, can be a bad landlord. Without the affectation of liberality, such men are frequently liberal to a degree not easy to be imagined. A landlord who keeps aloof from his tenants, or who only condescends to look in upon them for a few minutes when they are dining, upon audit days, with the steward in the hall, and who ostentatiously announces his having abated ten or fifteen per cent. from their rents, treats them with unbecoming *hauteur*, and most frequently acts oppressively by many amongst them. Were it not invidious, we could give fifty instances of this. But with landlords who meet their tenants, and those of the neighbourhood, on easy terms, whether at their own houses, or in the public markets—who join in their sports, who treat them as friends, and not as dependents, and who make it their business to know the exact condition of every individual amongst them—bad conduct is next to impossible. Such men cannot commit harsh acts; nor can they, without good cause, proceed to distrain any tenant. We, therefore, are always glad to hear of such meetings as that at Aylesbury, where all classes are mingled freely together, and where there is neither assumption on the one side, nor servile crouching on the other.

It is generally known, and, therefore, we may, perhaps, be excused for alluding to it, that owing to peculiar circumstances, for which, however, he is in no degree answerable, Lord Chandos's means of doing good are at present comparatively circumscribed. His great popularity in Bucks is, therefore, the result of his frank, conciliatory conduct, and is as honourable to the farmers and yeomanry of the county as to his lordship.

The topics dwelt on in the speeches at the Aylesbury dinner, were such as might be anticipated. We were, however, gratified to find, that there was less

of that everlasting agricultural distress than is usually heard at such meetings. Lord Chandos pledged himself not to relax in his efforts to procure a repeal of the malt tax, and he dwelt much on the fact, that the Commissioners of Excise Inquiry had recommended the repeal of half the duty. But, notwithstanding the respect due to every suggestion offered by the Commissioners in question, we do not think they will gain, in this instance, many impartial converts to their opinion. We do not pretend to say that the malt tax is without its defects, or that it may not press heavily on some classes; but then we *must* raise a large amount of revenue in one way or another; and of all the taxes that at present exist, or that (so far as we know) have been suggested, that on malt appears to be among the least objectionable; and one that should be about the last to be meddled with. Lord Chandos, and other gentlemen of influence, should turn their attention to other modes of relieving the agriculturists, and not insist on measures they can have no reasonable hope of carrying. Why don't the leading agriculturists in the south exert themselves to effect a change in the ruinous customs that prevail in several counties as to the entry to farms? Why don't they try to introduce a more economical system of agriculture? In Northumberland, Lincoln, and Norfolk, the best farmed counties in the kingdom, more than two horses are never seen in a plough, and why, then, should there be teams of four, five, and even six horses, in Bucks, Berks, Surrey, &c.? Let the agriculturists do for themselves all that may be reasonably expected of them, and if that be not enough, then, but not till then, let them come to Parliament and solicit assistance.

### THE MALT TAX.

(From the Standard.)

If the Whig-Radical government are ready, as the *Morning Chronicle* seems to intimate, to remit the one-half of the malt duty, we think we can safely promise for the Marquis of Chandos that he will give his powerful aid to the administration in effecting that object; and, farther, we think we can promise for his lordship, and for the whole of the Conservative party, that they will assist rather than obstruct, whatever plan shall be suggested by the cabinet, to make good the financial deficit caused by that remission. It can scarcely be pretended, however, with any modesty, that this benefit, great as it would be, or any other benefit, ought to purchase for ministers a charter of mis-government—a license to oppress the poor in one country, and to destroy the church in another—to squander the commerce of the empire, and degrade its character amongst foreigners; in a word, virtually to take the crown from the head of King William, and place it upon the head of Mr. Daniel O'Connell. Yet this is the modest bargain that the *Morning Chronicle* would drive with the Marquis of Chandos, and with those who agree with his lordship upon the subject of the malt duty. In accepting such a bargain, the noble marquis might appear, for a short time and in the narrow sense, to be the farmer's friend; but such a friend as he is to the farmer Lord Chandos would no longer be, for he would no longer be the friend of his country.

We should rejoice to learn, however, that the cabinet seriously proposes to act upon Sir Henry Parnell's advice. This cabinet can act upon that advice; the cabinet of Sir Robert Peel could not. We make both assertions without any reference to the numerical strength of parties in the House of Commons. In this matter the difference of power is not connected

with the numerical proportion of the parties into which the House of Commons is so nearly equally divided. It is the difference of character of the two great parties which renders a matter of perfect facility to the one, what would be absolutely impossible for the other, even though the parties are exactly equal in numbers, as we almost believe they are by this time. This difference of character lies in the fact that the Conservatives are a party pursuing no other object but the common good, and wholly incapable of putting the public credit and the public peace in danger for the sake of supplanting an administration; while, on the other hand, as is notorious, the allied anti-Conservatives are formed from a confederation of factions, each and all of them prepared to go every length of public mischief that may seem to promise a continued possession of power and place. Were the present cabinet, therefore, to propose a remission of the half or of the whole of the malt duties, they could make the proposition with a perfect confidence that the deficiency of revenue would be zealously made up by Conservatives. The Conservative is not the party that would resort to stopping of the supplies, to the ruin of public credit, or to a curtailment of the revenue, alike ruinous, as a means of scaling office. But, had Sir R. Peel assented to the remission of the malt tax last winter, is there anything in the conduct of the majority during the session to permit the belief that a substitute would have been granted? Were the men who confessed themselves prepared to stop the supplies, in order to turn out the administration, likely to accommodate that administration by opening, at its request, a new department of finance.

We have never concealed the difficulty into which the Conservative party was thrown by the question of the malt tax; and this difficulty did not lie a moment concealed from the vigilant and unscrupulous enemy. Many of the county members had pledged themselves to support the repeal or partial remission of the tax; but they had so pledged themselves with a view to a state of affairs under which, as we have seen, such partial repeal could be easily and safely effected. The otherwise beneficial change for the country placed the question in a totally different position; for it rendered this repeal or remission an instrument by which the Whig-Radicals, if they employed it as a key to place (and who could doubt that they would so employ it?) might throw the country into confusion.

In such a juncture, the sincere friend of the farmer, who would also be the friend of his country, could scarcely act in a manner to satisfy himself. We, therefore, view with equal respect the motives of those, pledged or unpledged, who voted for, or who voted against, the motion of the Marquis of Chandos. That the noble marquis could not have acted otherwise than he did must be obvious to all who rightly consider his position as the willing, and yet almost compelled leader of the agricultural interest. Now, however, that all difficulties are removed—now that the financial Mentor of the Whig ministry himself comes forward to urge the remission of a part, at least, of this most pernicious tax, the Marquis of Chandos properly calls upon the agricultural interest to demand from the cabinet that which the cabinet can grant with safety, and which its adviser says it ought to grant. We have no doubt that the suggestion of the noble marquis will be adopted.

### THE REVENUE.

(From the Courier.)

On the whole, every new account of the Revenue laid before Parliament, and every new statement of

the consumption, shows that the resources of the country are not only not impaired, but that they are as vigorous and productive as ever. All that is wanted to develop them to the utmost is tranquillity, the removal of restrictions, and moderate duties. Agitation is the bane of industry; and those who endeavour to keep it alive are the greatest enemies of the industrious classes. It is gratifying to see how completely all experience goes to prove the superior productiveness of low duties. In no one instance has a duty on an article in general demand been sufficiently reduced without its consumption being so much increased, that the Revenue has either gained by the reduction, or its loss been inconsiderable. The most objectionable of the existing duties is that on timber; and, next to it, those on brandy and hollands. The timber duty is a disgrace to a civilized country—it has every quality that a tax ought not to have, and not one that it should have. It is not imposed for the sake of revenue, but to promote the interests of a small class at the expense of the country, and to force the use of a bad, in preference to that of a good article. For every single shilling that it puts into the coffers of the Treasury, it takes two ought out of the pockets of the public. The duties on brandy and hollands are also quite disgraceful. There can be none worse among the Caffres. These articles are sold within sight of the English coast, at from 3s 6d to 4s 6d a gallon; and, in our wisdom, we impose on them a duty of 22s 6d a gallon—that is, a duty of from 500 to 700 per cent. ! We do not know whether Mr. Vansittart, who proposed, or his successors, who in the teeth of experience and common sense have kept up this enormous duty, are most worthy of the esteem and regard of the smuggler. But for them *Othello's* occupation would have been nigh gone; and the gentlemen of the Preventive Service would have enjoyed something very like sinecures. But the duties in question furnish ample enjoyment for both parties, and keep them in a state of wholesome activity. Without excepting even Tipperary or Limerick, more ferocious contests take place, and more blood is spilt on the coasts of Kent and Sussex than any where else in Europe. In one respect, therefore, the duty on brandy and hollands is all that could be wished. It does not, it is true, all things considered, bring a solitary sixpence to the Treasury; but it does what Parliament would seem to think was about as good—it sets a host of smugglers in array against a host of Customs' officers, and affords, every now and then, an exhibition of murder and bloodshed, that will almost bear to be compared even with that of Rathcormac!

#### STATE OF THE COUNTRY,

(*From the Courier.*)

However individuals and parties may differ in their opinion as to politics, and the conduct and character of public men, they must all rejoice in the generally flourishing state of the country. We do not believe that it is possible to specify any period in our history when all the great branches of industry were in a more satisfactory state, or when so many new sources of wealth and prosperity were being daily explored, and brought into operation. The present period has little in common with 1825. During that and the preceding year vast additions were made to the issues of country bank paper, and the prices of almost all sorts of commodities were rapidly augmented. The facility of obtaining discounts and loans gave speculators the means of engaging in the wildest projects, while all those who

had stocks on hand flattered themselves with the delusive notion that they were becoming richer every day. But it soon became obvious, from the continued and heavy drain on the bank for gold, that the whole fabric was hollow and unsound; and the revulsion that ultimately ensued did not come with surprise on any one acquainted with the facts, and aware of the nature of our credit system. But, though it is impossible to say before hand what may be the state of any country at any future period, there does not seem, provided the public tranquillity and security be maintained, to be at present any thing in our situation to excite alarm as to coming events. There is no drain upon the bank, and with the single exception of sugar, the prices of most considerable articles are either stationary or declining. Our present prosperity depends on no fictitious or unnatural excitement: it is the genuine result of the public industry and intelligence, and the very best thing that can be done to promote it is to let it alone—to allow individuals to prosecute their own interest in their own way.

It was supposed by many, and apparently on pretty good grounds, that the low prices of agricultural produce would be fatal to our agriculture, and would make us dependent on the Continent for large supplies of corn. But necessity has been in that, as in most other things, the mother not only of invention, but of cheapness and abundance. The low prices did for all the agriculturists of the empire what a rise of rents has frequently done for those of a single estate—it compelled them to be more industrious, more economical, and more skilful; and the results have been quite astonishing. Though the population of Great Britain be now 1,200,000 greater than in 1830, and though all classes of individuals be better fed than at any former period, we do not import a single bushel of foreign corn, notwithstanding prices have, in the interval referred to, fallen 24s a quarter. This is, perhaps, the most extraordinary fact in the history of industry. Unless when bad harvests occur, the skill of our farmers has annihilated the corn laws; and if any thing like reasonable security could be introduced into Ireland, we should in less than a half a dozen years, be greater exporters of corn than we ever were at any period of reign of George II.

If from the agriculture we turn to the manufactures and commerce of the country, we find them in an equally flourishing and vigorous state. If we were to judge from the rapidity of its progress, we should think that the cotton manufacture had been but lately introduced amongst us. It is, in fact, making a greater advance at this moment, than it did after Sir Richard Arkwright's patents had been set aside, and his all but miraculous discoveries and inventions became public property. It was anticipated by many that the progress of the manufacture would be arrested by a deficiency and consequent high price of the raw material; but its production in the United States and elsewhere bids fair to keep pace with its consumption in England and other countries. And, looking at the innumerable sources whence raw cotton may be derived, we do not believe, how great soever may be the progress of the manufacture, that it will come to a stand-still for want of raw material at a reasonable price.

The woollen manufacture is not less prosperous than that of cotton. The exports in 1834 were not quite so great as in 1833, but the price of wool, which had attained to an extraordinary elevation at the former period, is now at a more reasonable rate, and the manufacturers are not, consequently, obliged to use so much circumspection.

The iron trade is also extremely flourishing. The low prices have enforced a greater degree of economy in all departments of the business, and have been the source of many improvements. In Scotland the business has increased 50 per cent. during the last ten years. In 1825 the entire quantity of iron made in that part of the empire was certainly under 50,000 tons; whereas it now exceeds 76,000 tons, and is rapidly extending, several new furnaces having been constructed in the course of the last and present year.

Our commerce is not less prosperous. All the sinister predictions that were to freely indulged in as to the falling off in the China trade that was to follow the abolition of the company's exclusive privileges, and the bad quality of the tea that the free traders were to import, have been *completely disproved*! The trade at Canton has been carried on without any interruption, except what was occasioned by the improper pretensions of Lord Napier; an unusually large quantity of tea has been imported, and its quality has been materially improved. New markets are opening to our produce in all parts of the world, and the old ones are becoming more and more extensive. The adoption of the recommendation of the late committee of the House of Commons to take 15s a load from the duty on Baltic timber will be of signal importance to the most valuable branch of our trade—that with the north of Europe. The whole of the trade of the Russian empire may, indeed, be said, to be in our hands. Russia has few or no mercantile ships, so that we are not only her merchants and factors, but also her carriers. Every new triumph of civilization in that vast and rapidly improving empire is a new and prolific source of wealth to England.

Our taxation, that has been the theme of so much elaborate and so much absurd discussion is every day becoming less and less heavy, because the public is becoming more and more able to bear it. Were the ridiculously extravagant duties on timber, brandy, hollands, tobacco, and a few other articles, effectually reduced—which they might be without the sacrifice of a shilling of revenue—there would be nothing to object to in the mode of its imposition. Even as it is, we do not believe that it imposes any greater burden upon us than it did on our ancestors at the accession of George III.

We do not, however, mean to say that we look upon the state of the country as in *all* respects satisfactory. Our system of country banking is anything but what it should be; and the immigration of Irish paupers into Britain threatens to have the most pernicious effects. When the last census was taken, there were in Glasgow, out of a population of 202,000, no fewer than 35,000 Irish! And we believe that the proportion of Irish is about the same at Manchester, Liverpool, and generally along the western coast. It is not easy to exaggerate the injurious influence of this immigration. The wages of the English and Scotch labourers are reduced by the competition of the Irish; and, what is worse, the habits and modes of life of the former are debased by the example and association of those who are content to vegetate in filth and misery. If nothing be done to stop up the sources of pauperism in Ireland, and if the pauper horde be allowed to spread itself over this country, it seems pretty clear that the condition of the lower classes in both islands will ultimately be brought pretty near to a level; and it is but too certain that the equalization will be accomplished, rather by the degradation of the English and Scotch than by the elevation of the Irish. But there are means, and those quite effectual for the object, by

which this most undesirable consummation may be averted; and it will be the fault of the people of England if they do not compel them to be adopted.

## AGRICULTURAL MEETINGS.

(From the Mark Lane Express.)

There is no portion of the duty devolving upon us which we perform with so much gratification as the perusal of the reports of the proceedings which take place at the respective agricultural meetings and ploughing matches throughout the country. We have upon many occasions endeavoured to impress our agricultural readers with the absolute *necessity* of extending agricultural associations over the whole kingdom with a view to uphold the interests of that body, which, from want of a bond of mutual co-operation, is incapable of defence, but which if united would be all-powerful. We do not desire to set the agricultural body in array against the other classes of the community; we only require for them the same protection which has ever been, and now is, extended to the manufacturing and commercial classes. Self-protection, however, is but one of the many advantages to be derived from the existence of agricultural associations. The periodical, nay, we may say the constant intercourse which the conduct of business connected with these associations occasions between the landlord and tenant, between the members of what is termed the higher class and the middle class, between the gentry and the yeomanry, cannot fail to be productive of *mutual* advantage. It operates beneficially on the higher class by enabling them to learn by the evidence of their own senses the real situation of the tenantry and the industrious classes, and tends to dilute that aristocratic bearing which is the result of their peculiar education. To the middle class the advantage is also great, as it enables them to form a just estimate of the feelings which are really entertained towards them by their superiors, and proves an antidote to the poison so often instilled into their minds by interested individuals, who, to serve their own mean party purposes, would make them believe that the higher order, as it is called, considers them born, merely to serve *them*—to be *their* slaves. There are few men who can read the history of the clans of Scotland, when every member of the clan was ready to turn out and defend to the last, the rights and person of his chieftain, without feeling a very great degree of enthusiasm. The objects in view, however, in those days were such as seldom to reflect credit upon the contending parties, and therefore must bring into disrepute the spirit of clanship itself. The only union of men which we know of in the present day, which partakes of a similar character to the ancient clanship, is the bond of union which subsists between a kind and considerate landlord and a deserving and grateful body of tenantry. Large bodies of men banded to-

gether for the purpose of attaining some particular, for instance, a political, object, uniformly consist of individuals who are united merely in furtherance of one object, and having no other tie. But between the landlord and tenant, whose families many of them have stood in that relation for several generations, or at least for a long series of years, there often is, and there always *should* be a species of good feeling bordering upon relationship, which is felt by no other parties but those who are united by ties of kindred. It may seem that the relation of landlord and tenant cannot have much bearing upon the subject of agricultural associations generally; this, however, upon examination will, we think, be found otherwise. Amongst the members of most agricultural societies will be found enrolled the names of some large landowners, who, by this means, are brought into immediate intercourse with their tenantry, and in many instances the owner of large estates is himself the leading member of the association, and in attending the association he is but meeting a large body of his own tenantry, interspersed with some few other individuals, whose interests are equally involved, being embarked in the same pursuit. The celebrated agricultural meetings at Holkham and Netherby are of this kind. How gratifying the reflection to the owner of the estate of Holkham, that whilst he has served his own interest in converting a barren sand into a productive cornfield, he has raised around him a happy tenantry, who in their turn have been enabled to afford the means of subsistence to a large number of that class which depends upon the sweat of the brow for their daily bread. What an example worthy of imitation by those who are in a condition to follow it, is that of the owner of Netherby, who, at the last meeting of the Netherby association, surrounded by his relations, his friends, and his tenantry whom he treated and considered as his friends, could address them in the following language:—"Gentlemen, I do confess that it has been my object through life to be surrounded by a happy and grateful tenantry; there may be higher, and I fear me, more empty ambitions, but I can only say that the utmost of my ambition amounts to this, that while I continue to hold this estate I may so demean myself, that when I am no more in the land, my memory shall testify that I have proved myself a kind and generous landlord; and to the best of my endeavours nothing shall be wanting to maintain this character."

Another kind of agricultural meeting from which much benefit is derived by the farming body, is that of ploughing matches, the direct advantage of which to the farmer is manifest, in the inducement to good workmanship, held out to the ploughmen by an appeal at once to their ambition and their interest. One of the most successful of these is that which was instituted some years since by Mr. Baker, of Cottesmere, in the county of Rutland, and which took place on the 17th

inst. We rejoice to learn that it was more fully attended than on any previous occasion, there having been upwards of 3,000 persons. Amongst the company on the field were Sir Gerard Noel, Bart., the Hon. and Rev. Le-land Noel, Rev. Henry Neville, E. H. Wilmot, Esq., and some of the most eminent agriculturists of the neighbourhood. Mr. Baker, to whom the cause of agriculture throughout the country, but more particularly in the county of Rutland, is so much indebted for originating this meeting, showed, as usual, 50 rams, for letting. They were universally admired, and 49 of them were let for the season at from 6*l.* to 16*l.* each.—There were in all 48 ploughs entered, of which 46 started. The ploughing was excellent, particularly in the second class, which the judges declared to be better than they had ever seen in any county. One prize was won by Ransome's Bedfordshire plough, one by a Northamptonshire plough, one by a Casterton plough by Bird, and the remaining prizes were all won by Ransome's *Rutland ploughs*, which were first made at the suggestion and under the direction of Mr. Baker. We trust that landlords will follow the examples which we have just set before them, being from observation and experience perfectly satisfied that the interest of the tenant is equally the interest of the landlord, as was well stated by Mr. Yule, the steward of the Netherby estate, in the following words, when addressing the tenantry at the Netherby meeting—" *I have always found that the best way to promote the interest of my employer, was to study your wishes, and promote them to the utmost of my power.*"

#### COMMERCIAL DUTIES.

(From the Public Ledger.)

The latest intelligence from Paris is of a character more important and interesting to the English reader than any which we have received of late. The portion of Paris news to which we allude as being of this description will be found in the summary, which we give in another column, of the Royal ordonnance issued for the regulation of certain existing commercial duties in France. The intent of this ordonnance is to modify some of the duties substituted by the Tariff of June, 1834, for absolute prohibition, and relates specially to the import duties of iron, coal, watches, Cachmere shawls, India silk handkerchiefs, Brazil woods, elephants' teeth, and indigo. Palm oil, salpêtre, and some other articles of minor importance are also comprised in its regulations. The effect of the alterations will in each case be a reduction of the existing duties to a greater or less extent; but the most important modification will be found in the alteration of the duties on iron and coal imported into France. By this ordonnance the duty on coals imported into France to the south and west of the sands of Olonne, and along the whole coast of the Mediterranean, which at present is one franc for the 100 kilogrammes, will be reduced to six sous. Upon cast iron a reduction of one franc upon the 100 kilogrammes is made; the duty on that article will therefore in future be eight francs, instead of nine, as at present. On wrought iron a reduction of one-fifth of the existing duty is made; in future, instead of 25 francs, 20 francs only will be charged.

## TURF INTELLIGENCE.

Although, as far as regards Racing, every other place sinks almost into nothingness compared to Newmarket, yet the meetings at this celebrated centre of attraction, though numerous, and interesting in the highest degree to that exalted portion of the community who visit Newmarket for the purpose of witnessing the performances of their own horses, excites not that general attention throughout the country which we uniformly perceive elicited by the Doncaster St. Leger, the Derby, the Oaks, the Ascot, the Liverpool, the Goodwood Cups, &c. What are called "the Newmarket horses" are allowed to be of a first-rate description; but beyond mere racing, the Newmarket Meetings possess no attraction for holiday folks, and are therefore very thinly attended.

Sufficient symptoms of the near approach of winter have already made their appearance, impressively indicating that the racing season is fast drawing to a close; and, if we take a retrospective view of the operations of the turf from their commencement in the month of May up to the present period, we shall find that many interesting races have taken place, and that nothing has occurred which can create unpleasant reflections, except those miserably meagre and grossly incorrect "Sporting Reports," which spread a delusive notion all over the kingdom through the medium of the London papers.

As the year 1834 brought out one of the best (if not the very best) colts that ever appeared on the turf, the year 1835 has been remarkable for introducing to notice a filly of equally superior pretensions: it need hardly be observed, that we allude to Plenipo and Queen of Trumps.

Chester races, which are considered as forming the commencement of the season, continued, as usual, for five days, but the sport was perhaps on the whole, scarcely a fair average. For the spectator, Chester race-ground affords the most commodious, as well as the most elegant, accommodations in the kingdom—in this respect it stands alone; while the business is uniformly well conducted under the able management of Mr. Jackson. It is to be regretted, however, that a depressing influence has operated injuriously on this highly respectable meeting for several years past, owing to the insinuating, the sinister, and intolerant spirit of sectarianism with which this good old city has unfortunately become imbued; and particularly from the Methodist conduct of its chief magistrate for the last two seasons. We have heard this accomplished functionary deliver his oracular apothegms from the awful seat of justice; and, although we might think that he possessed not exactly the impressive and fiery declamation of Demosthenes, or the turgid and sonorously-sounding eloquence of Cicero, yet we admired the solemn and injunctive manner in which he delivered his elaborate precepts, and thought the magisterial mantle descended with superior dignity from the shoulders of this semicircle-regent of the royal city of Chester. We hope he will take our advice, and abandon that uncalculated and fastidious meddling during the races, that rush-light fiddle faddle with which, during the two last meetings, he has so very unnecessarily busied himself. If he happen to possess no relish for racing (which, if true, evinces an utter destitution of good taste, to say the least of it;) let him not take such overweening and ridiculous pains to spoil the sport of others. It is some consolation, however, to know that, from the well-timed exertions of the choice spirits of Chester, the stakes will be rendered more numerous and more valuable; superior sport will therefore follow as a natural consequence.

We have given our opinion of the sinister manner in which the *pecuniary-skillful* managers of Epsom races conduct the meetings, in former numbers of our mis-

cellany; and we regret to find that the same baneful system continues to shed its withering influence over Epsom Downs, as will be perceived from the wretched paucity rendered so miserably manifest in the accompanying list. It will become disgraceful to continue the Derby and the Oaks at this place, unless the course be much, very much, improved, the business properly conducted, and the money which has hitherto found its way, clandestinely, into the pockets of private individuals, be applied to the increase of the present poverty-struck stakes. Epsom Spring meeting brought out Queen of Trumps in her glory, and is therefore as remarkable on this account, as it appeared last year in the display of Plenipo's extraordinary powers.

Ascot Meeting was not without its remarkable events, or at least, so they were bruited—in one case most slanderously. Ibrahim beat Ascot, which, after their previous exhibition on Epsom Downs, was an event unlooked-for altogether; there was nothing *slanderous* in this occurrence; but, in regard to the Plenipo affair, Mr. Batson was grossly libelled by the "London Sporting Reporter." Because Mr. Batson thought proper to prevent Plenipo from starting for the Cup, the most groundless and the basest insinuations were levelled against him by the "Gentleman" to whom we have just alluded. Had Mr. Batson not made known his intention in due time, there might have been cause for suspicion: but, on the morning of the previous day to that fixed for the race, he causes the circumstance to be publicly made known; what more could be expected? That Mr. Batson had the most substantial reasons for his conduct, we have not the least doubt: he might not like the state of the ground, to say nothing of a variety of circumstances which are continually occurring to put a racer out of trim; while we should consider it the greatest loss the Turf ever sustained should any misfortune befall the splendid animal whose extraordinary performances, and whose limited career, have excited so much interest in the racing world. It would appear as if Mr. Batson had retired in disgust, owing to the scurrilous reports raised against him, and echoed from one end of the kingdom to the other by the ignorant and mischievous mocking bird, whom we have frequently had occasion to notice.

Goodwood Meeting, although there was nothing very remarkable in the detail of the races, was not without its matter of astonishment, to wit, the transportation of General Chasse by steam from Liverpool to this place for the purpose of running for the Cup! Or, rather we should say, the *proposal* for this unusual mode of conveyance for horse flesh, originating from the prolific brain of the "London Sporting Reporter!" A voyage by sea for a horse on the eve of his race! Good! But no more of this.

The next prominent feature in racing affairs was Doncaster, where the nascent Majesty of the British throne and the Cambrian Queen were equally attractive. These races produced fair average sport, were well conducted throughout, nor did there exist, in any form whatever, the slightest foundation for that malignant, clumsily-manufactured, and calumnious paragraph, noticed in our last publication; which basely insinuated that an individual, (well known in the sporting world, who has liberally spent a handsome fortune in the pursuits of the field, and who, whatever may have been his inadvertencies, had done nothing, in the present instance, to which the slightest, the most distant, suspicion could attach) had made the most infamous offers to Mr. Mostyn in regard to his splendid filly, on the eve of the race for the St. Leger; that an attempt had been previously made to break into the stable which contained the Cambrian Queen, &c., &c., as if the "London Sporting Reporter" were anxious

to make up for his manifest and most egregious ignorance on Turf affairs, by the basest and most invidious slander. Like all human institutions, the Turf must be defective; but when its extensive ramifications, its weighty and multifarious pecuniary transactions, the elements of which it is indispensably composed, are duly considered; if disgust be excited by the occasional frauds which have been attempted, wonder will not fail to arise that its proceedings should have experienced so trifling a degree of pollution. If a lame duck waddle out of the alley; if a tradesman, through the instrumentality of the Insolvent Act, or the medium of the Gazette, contrive to defraud his creditors, the circumstance excites no surprise; but, if an adventurer in the betting circle be unable to meet his engagements, he is represented as unfit for civilized society, as if by keeping one or two individuals out of their winnings for a short period (for betting men will ultimately pay twenty shillings in the pound, if possible) were more base and more immoral, than bringing perhaps a number of families into distress or ruin. Above all, let us be careful, in our reprehensive expositions of the Turf, that we have *facts* upon which to express our dislike or abhorrence; and not in an ignorant, waspish, and malignant spirit, disgrace ourselves by the *base manufacture* of falsehood, for the mean, the infamously-groveling purpose, of calumny and destruction!

#### TATTERSALL'S, MONDAY, OCT. 19.

The assemblage at Hyde Park Corner was numerous, the attraction being the Earl of Chesterfield's horses, a draught from whose stud was offered for sale, and fell from the hammer at the following prices:

|                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------|-----|
| Carthusian, by Comus, out of Octavia                                                                                               | 100 |
| Bon Ton, 4 yrs by Phantom, dam by Skim                                                                                             | 125 |
| Lochinvar, 7 yrs, by Swap, out of Lady of the Lake                                                                                 | 60  |
| Ches filly, 2 yrs, by Langar, out of Emigrant's dam                                                                                | 30  |
| Yearling colt by Phantom, out of Aricia                                                                                            | 37  |
| Ditto, by Wrangler, out of Miss Craven's dam                                                                                       | 60  |
| Yearling filly, by Albany, out of Miss Lydia                                                                                       | 40  |
| Gioutte, by Partisan, cov. by Priam and Zingane                                                                                    | 44  |
| Aricia, by Rubens, out of Actæon's dam, cov. by Rubini                                                                             | 90  |
| Miss Lydia, by Walton, dam by Orville cov. by Zingane                                                                              | 105 |
| Pheasant, by Bustard, out of Plaything, cov. by Priam                                                                              | 35  |
| Mare, by Comus or Chateaux Margaux, cov. by Priam                                                                                  | 32  |
| Filly foal, by Sir Benjamin, out of Pheasant                                                                                       | 54  |
| And the following hunters from the same stable:—Claret, 75 gs; Clinker, 77 gs; Stella, 65 gs; Dublin, 150 gs, and Claxton, 140 gs. |     |

As Chester Races are considered the commencement of the season, the Holywell Hunt Meeting is regarded as its close. The latter has been rendered remarkable by the number of prizes which were carried off without competition. On the first day, Queen of Trumps walked over for the Produce Stakes, and also for the Chieftain Stakes. On the following morning, (Wednesday), Touchstone walked over for the Pengwern Stakes; and on the same day, Birdlime walked over for the Gold Cup, and Touchstone for the Post Sweepstakes. On Thursday, Birdlime walked over for the Baron Hill Stakes; and on the same day Usury received forfeit from ch f by Teniers. We recollect no parallel case. On Tuesday, out of four Stakes, two only became objects of contention. On Wednesday, four tempting prizes produced only one race! Mr. Mostyn, the owner of Queen of Trumps, of Birdlime, and of Usury, has been eminently successful throughout the season: and like a cautious skilful General, contrived to be well prepared for the finishing meeting. His promising filly, Usury, had evidently been reserved for Holywell Races: she wins the Mostyn Stakes (of 10 sovs. each, 26 subs., amounting to 260*l.*;) she comes to the post twice, is successful in each case, and receives forfeit from a match with Sir R. Bulkeley's ch filly by Teniers. Birdlime walks over for the Gold Cup, and also for the Baron Hill Stakes, and wins a "Free Handicap for all the horses at Holywell;" he came out also for the Mostyn Stakes; but finding Usury had it all her own way, he did not run to win. Queen of Trumps walked over twice, which completed her engagements. Mr. Mostyn did not deem it requisite to bring her out for the Mostyn Stakes, being confident that he could win them without her assistance, and the event proved that he had ascertained the quality of Usury, and that

his calculation, therefore, was as accurate as possible. Touchstone was the favourite for the Mostyn Stakes; but when it is considered that he carried fourteen pounds more than Usury, his defeat can excite no surprise: it is true, he is a year older than the successful filly, and that such difference in weight is usual under similar circumstances; yet, when it is considered that five pounds are supposed to be equal to a distance, or 240 yards, the advantage would appear in favour of the three years old, particularly if it happen to be a filly, as the feminine gender in the horse species attains maturity much earlier than the opposite sex: in regard to the present case, Touchstone had not merely the weight, but a superior animal also against him.

Having already remarked, that Mr. Mostyn has been eminently successful on the Turf throughout the present season, it may be further observed, that his nags have retired into winter quarters, without having been once overmarked, or having experienced that kind of severe exertion calculated to produce permanent injury. This gentleman had evidently kept a good reserve for the conclusive struggle, which takes place in his own immediate vicinity; and it has so happened that his racers may be said to have carried all before them—principally by walking over. Mr. Mostyn's stud is of a superior description; further, his horses have been well trained and well placed. They came to the post, generally speaking, more "fleshy" perhaps than usual. When Queen of Trumps appeared for the Oaks on Epsom Downs, she was considered by the "knowing ones" (many of whom, however, are utterly ignorant of the principles of power and speed) as "too fat;" they therefore betted against her, and were not very pleasingly surprised when they observed her hobble along so fast with this load of "fat!" "Facts are stubborn things."

In regard to weight, and particularly the difference between that of the three and that of the four years old, which is in general nearly equal to three distances, a stone, fourteen pounds: the advantage, as we have already observed, seems in favour of three years old, particularly when the latter happens to be a filly; for, as she attains maturity a year at least sooner than the colt, it may be presumed that, as far as relates to the progress of perfection, the three-year old filly is equal to the four-year old colt; and therefore the latter labours under considerable disadvantage in carrying fourteen pounds more. It is true, the horse, like the male of by far the greater number of varieties of animated nature, is larger and more powerful than the mare, for which, when years are equal, three pounds may be regarded as the general allowance; which, for reasons already advanced, we think, gives the advantage to the filly. When maturity is attained on both sides, the allowance seems perfectly consistent with reason, and not before. We shall be told, perhaps, that fillies very seldom prove successful for the Derby, or the Doncaster St. Leger; a circumstance which, after giving full weight to our reasoning in favour of fillies, ought to excite no surprise, since, if we look at the competitors for either of these highly-important stakes, we shall find that, in regard to numbers, the odds preponderate very greatly in favour of the colts. Yet, let it not be forgotten that the late Sir Charles Bunbury's Elinor, was, like the Cambrian Queen, doubly successful. No doubt can be entertained of the success of Fleur de Lis for the Doncaster St. Leger, had it not been for her accidental fall. The success of Bessy Bedlam was no wise doubtful—*had all been on the square*. Lastly, Queen of Trumps, of whom we have said sufficient. This consideration leads to another: the greater part of the successful horses, either for the Derby or the St. Leger, seldom distinguish themselves afterwards in that eminent manner as a person might be inconsiderately led to expect from carrying away a prize from so many chosen and select competitors. Some are never able to race afterwards, Tarrare, for instance. It will be interesting to watch the progress of Mundig: he was no where for the Doncaster St. Leger, though he proved successful at the same meeting a day or two afterwards—when, be it recollected, he had nothing to beat.

# AN ACT TO CONSOLIDATE AND AMEND THE LAWS RELATING TO HIGHWAYS IN THAT PART OF GREAT BRITAIN CALLED ENGLAND.

[PASSED AUGUST 31st, 1835.]

Repeal of 6 G. I. c. 6, in part, except as to London; 18 G. 2. c. 33. except as to London; 24 G. 2. c. 43. in part, except as to London; 30 G. 2. c. 22. except as to London; 13 G. 3. c. 78; 34 G. 3. c. 64; 34 G. 3. c. 74: Part of 42 G. 3. c. 90; 44 G. 3. c. 52; 54 G. 3. c. 109; and 55 G. 3. c. 68.

Whereas it is expedient to amend the laws relating to Highways in that part of Great Britain called England, and to consolidate the same in one act, and to make other provisions respecting highways; be it therefore enacted by the King's most Excellent Majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, that so much of an act passed in the sixth year of the reign of king George the first, intituled an act for preventing the carriage of excessive loads of meal, malt, bricks, and coals within ten miles of the cities of London and Westminster, as relates to the carriage of bricks, except so far as the same relates to the city of London; and also an act passed in the eighteenth year of the reign of king George the second intituled an act to repeal a clause made in the third year of the reign of king William and queen Mary, relating to carts used by persons inhabiting within the limits of the weekly bills of mortality, and to allow such carts to be drawn with three horses, and to prevent the misbehaviour of the drivers of carts in streets within the said limits, except so far as the same relates to the city of London; and also so much of an act passed in the twenty-fourth year of the reign of king George the second, intituled an act for the more effectual preservation of the turnpike roads in that part of Great Britain called England, and for the disposition of penalties given by acts of Parliament relating to the highways in that part of Great Britain called England, and for enforcing the recovery thereof; and for the more effectual preventing the mischief occasioned by the drivers riding upon carts, drays, carriages, and waggons in the city of London and within ten miles thereof, as relates to the preventing mischief occasioned by the drivers riding upon carts, drays, carriages, and waggons in the city of London or within ten miles thereof, except so far as the same relates to the city of London; and also an act passed in the thirtieth year of the reign of king George the second, intituled an act to explain and amend an act made in the eighteenth year of his present majesty's reign, to prevent the misbehaviour of the drivers of carts in the streets in London, Westminster, and the limits of the weekly bills of mortality, and for other purposes in this act mentioned, except so far as the same relates to the city of London; and also an act passed in the thirteenth year of the reign of king George the third, intituled an act to explain, amend, and reduce into one act of parliament the statutes now in being for the amendment and preservation of the public highways within that part of Great Britain called England, and for other purposes; and also an act passed in the thirty-fourth year of the reign of king George the third, intituled an act for the more effectually repairing of such parts of the highways of this kingdom as are to be repaired by two parishes; and also an act passed in the same thirty-fourth year of the reign of George the third, intituled an act for varying some of the provisions in an act of the thirteenth year of his present Majesty's reign,

respecting the public highways within that part of Great Britain called England, which relate to the performance of statute duty; and also so much of an act passed in the forty-second year of the reign of king George the third, intituled an act for amending the laws relating to the militia in England, and for augmenting the militia, as relates to the exemption of any serjeant, corporal, drummer, or private of the militia from performing highway duty, commonly called statute duty; and also an act passed in the forty-fourth year of the reign of king George the third, intituled an act to alter and amend so much of an act passed the thirty-fourth year of his present Majesty as relates to the amount of the sums to be paid by persons compounding for the performance of statute duty; and also an act passed in the fifty-fourth year of the reign of king George the third, intituled an act to amend an act of the thirteenth year of his present Majesty, to explain, amend, and reduce into one act the statutes now in force for the amendment and preservation of the public highways within England, and for other purposes; and also an act passed in the fifty-fifth year of the reign of king George the third, intituled an act to amend an act of the thirteenth year of his present Majesty, for the amendment and preservation of the public highways, in so far as the same relates to notice of appeal against turning or diverting a public highway, and to extend the provisions of the same act to the stopping up of unnecessary roads; shall be and the same are hereby repealed.

Not to revive repealed acts.

II. Provided always, and be it enacted, that nothing herein contained shall extend or be construed to extend so as to revive or give any force or effect to any act repealed by the said recited acts or any of them, but such acts shall be and continue repealed in such and the like manner as if this act had not been made.

As to the recovery of penalties incurred for offences against Acts repealed.

III. Provided always, and be it further enacted, that nothing herein contained shall extend or be deemed or construed to interfere with any acts done or contracts or agreements heretofore made under the authority of any of the said recited acts, or to extend to prevent the suing for or recovery of any penalty incurred by any offence committed against the provisions of the said recited acts or any of them previous to the repeal of the said acts in and by this act, or to prevent or defeat any prosecution commenced or to be brought for such offence; but all penalties and forfeitures incurred may be sued for and recovered, and all contracts and agreements may be enforced, and all encroachments, nuisances, and other offences made or committed previous to the repeal of the said acts, against the provisions of the said acts or any of them, may be abated or prosecuted by the surveyor appointed under this act, in the same manner to all intents and purposes as if this act had not been passed.

Present surveyor to continue until a surveyor is appointed.

IV. Provided always, and be it further enacted, that the surveyor appointed under the authority of any of the said recited acts shall continue to act, and

shall have the same powers, authorities, and be subject to the discharge of the same duty, and be liable to the same penalties, as the surveyor to be appointed under the authority of this act, until such appointment shall have been made.

*Interpretation clause.*

V. And be it further enacted, that in the construction of this act the word "surveyor" shall be understood to mean surveyor of the highways, or waywarden; the word "parish" shall be construed to include parish, township, tithing, rape, vill, wapentake, division, city, borough, liberty, market town, franchise, hamlet, precinct, chapelry, or any other place or district maintaining its own highways; and wherever any thing in this act is prescribed to be done by the inhabitants of any parish in vestry assembled, the same shall be construed to extend to any meeting of inhabitants contributing to the highway rates in places where there shall be no vestry meeting, provided the same notice\* shall have been given of the said meeting as would be required by law for the assembling of a meeting in vestry; and that the word "highways" shall be understood to mean all roads, bridges (not being county bridges), carriageways, cartways, horseways, bridleways, footways, causeways, churchways, and pavements; and that the word "justices" shall be understood to mean justices of the peace for the county, riding, division, shire, city, town, borough, liberty, or place in which the highway may be situate or in which the offence may be committed; and that the word "church" shall be understood to include chapel; and that the word "division" shall be understood to include limit; and that the word "owner" shall be understood to include occupier; and "inhabitant" to include any person rated to the highway rate; and the words "petty session" or "petty sessions" to mean the petty session or petty sessions held for the division or place; and wherever in this act, in describing or referring to any person or party, animal, matter, or thing, the word importing the singular number or the masculine gender only is used, the same shall be understood to include and shall be applied to several persons or parties as well as one person or party, and females as well as males, and several animals, matters, or things as well as one animal, matter, or thing, respectively, unless there be something in the subject or context repugnant to such construction; and all the powers hereby given to, and notices, matters, and things required for, and duties, liabilities, and forfeitures imposed on, surveyors, shall be applicable to all persons, bodies politic or corporate, liable to the repair of any highway.

*Surveyor to be elected annually; may be re-elected.*

VI. And be it further enacted, that the inhabitants of every parish maintaining its own highways, at their first meeting in vestry for the nomination of overseers of the poor in every year, shall proceed to

the election of one or more persons to serve the office of surveyor in the said parish for the year then next ensuing: provided always, that any outgoing surveyor shall continue to act until his successor shall be appointed, and shall be re-eligible, and may be re-elected, and shall in such case continue to act and remain in office, any thing herein contained to the contrary notwithstanding; and in such case notice of such election shall be given by the chairman to the person elected and to the outgoing surveyor: provided always, that in any parish where there is no meeting in the year for the nomination of overseers of the poor, the inhabitants contributing to the highway rate shall meet at their usual place of public meeting upon the twenty-fifth day of March, or if that should happen to be a Sunday or Good Friday, then on the day next following, or within fourteen days next after the said twenty-fifth day of March in every year, to elect one or more persons to serve the office of surveyor for the said parish; which surveyor shall repair and keep in repair the several highways in the said parish for which he is appointed, and which are now or hereafter may become liable to be repaired by the said parish.

*Qualification of surveyor.*

VII. And be it further enacted, that any person living within the parish or any adjoining parish, and having an estate in houses, lands, tenements, or hereditaments lying within such parish, in his own right or in right of his wife, of the value of ten pounds by the year, or a personal estate of the value of one hundred pounds (such person not living within the parish being willing to serve the office), or being an occupier or tenant of houses, lands, tenements, or hereditaments (whether resident within the parish or within any adjoining parish) of the yearly value of twenty pounds, shall be eligible to be elected a surveyor for the purposes of this act: provided nevertheless, that no person who is now exempted by law from serving the office of overseer of the poor shall be compellable to serve the office of surveyor: provided also, that any person who may be chosen and elected to serve the said office of surveyor may provide a sufficient deputy, such deputy to be approved of by the justices at a special sessions for the highways, who shall by writing under their hands testify their consent thereto.

*Penalty on surveyor not acting when chosen.*

VIII. And be it further enacted, that if any person who shall be so chosen and elected, and who is not exempt as aforesaid from serving the said office, shall refuse or neglect to take upon himself the office of surveyor, or to provide a sufficient deputy, to be approved of as aforesaid, he shall forfeit, on conviction before any two justices, any sum not exceeding twenty pounds, unless he can show to the said justices good and sufficient cause why he should not be called upon to serve the said office: provided also, that every deputy so provided and approved of shall have the same powers and authorities, and be subject to the discharge of the same duty, and be liable to the same penalties as any surveyor appointed under the authority of this act.

*Surveyor may be appointed with a salary.*

IX. And be it further enacted, that, instead of electing such surveyor as hereinbefore mentioned, it shall be lawful for the majority of the inhabitants so assembled as aforesaid in any parish for the election of surveyors as aforesaid to nominate and elect any one person of skill and experience to serve the said office of surveyor of such parish, and to fix such salary for the execution of such office as they shall

\* By the 58 Geo. 3, c. 68, § 1, it is enacted, that from and after the 1st day of July, 1818, no vestry, or meeting of the inhabitants in vestry of, or for any parish, shall be holden until public notice shall have been given of such vestry, and of the place and hour of holding the same, and the special purpose thereof, three days, at the least, before the day appointed for holding such vestry, by the publication of such notice in the parish church or chapel, on some Sunday, during or immediately after, divine service, and by affixing the same, fairly written or printed, on the principal door of such church or chapel.

think fit; which said appointment shall be in writing on paper without stamp, and signed by the chairman of such meeting; and such surveyor, when so appointed, shall be invested with the same powers, and subject to the same duties, forfeitures, and penalties as any surveyor appointed under the authority of this act would have been; and such salary shall be paid out of the money raised under the authority of this act, at such times and in such manner as shall have been agreed upon between the inhabitants so assembled as aforesaid and the person so nominated and elected as aforesaid: provided nevertheless, that if such surveyor shall cease to act, and be dismissed in the manner hereinafter described, such salary shall also in like manner cease and determine.

*Surveyor, on verifying his accounts, to name his successor.*

X. And be it further enacted, that the surveyor or surveyors, at the time of passing his or their accounts as herein mentioned, shall deliver to the justices a statement in writing of the name and residence of the person appointed to succeed him or them as surveyor or surveyors.

*Power to justices in certain cases to appoint a surveyor.*

XI. And be it further enacted, that in case it shall appear on oath to the justices at a special sessions for the highways that the inhabitants of any parish have neglected or refused to nominate and elect a surveyor or surveyors in manner and for the purposes aforesaid, or that the out-going surveyor, except he had been directed by the inhabitants so to do, has delivered no statement of the name and residence of his or their successor or successors, or that the surveyor is dead, or has ceased to possess the qualification, or is or has become disqualified in any manner herein mentioned, or that he has neglected to act, or refused to carry into operation the duties imposed upon him by this act, it shall and may be lawful for such justices, and they are hereby authorized and required, by writing under their hands, at their next succeeding special sessions for the highways, to dismiss such surveyor so neglecting to act or refusing to carry into operation the duties imposed upon him by this act, and to appoint any person whom they may think fit to be a surveyor for such parish till the annual meeting then next ensuing for the nomination of overseers or for the election of surveyors as aforesaid, and with or without such salary, as to the said justices shall seem fit and proper; and the said surveyor, when so appointed, shall be invested with the same powers, and be subject to the same duties, forfeitures, and penalties as any surveyor elected by the inhabitants of any parish as aforesaid would have been.

*When parish is situate in more than one county.*

XII. And be it further enacted, that when a parish is situate in more than one county, division, or liberty, the surveyor so to be appointed as last aforesaid shall be appointed by the justices at a special sessions for the highways assembled in that county, division, or liberty in which the church of the said parish shall be situate.

*Parishes may direct application to be made to justices at sessions for forming them into districts.*

XIII. And whereas it is expedient that in many cases parishes should be formed into districts for the purpose of having one sufficient person to be the district surveyor, who should have the superintendence and management of the funds to be raised and levied under the provisions of this act in each parish forming part of such district; be it therefore

enacted, that it shall and may be lawful for the inhabitants of any parish in vestry assembled, if they shall think fit, to empower and direct one of the churchwardens of such parish, or the chairman of the said vestry, to make application to the justices assembled at the quarter sessions for the county, or, where the parishes to be united shall be situated in the same division, at some special sessions for the division in which such parish shall be situate, for the purpose of being united with one or more parishes to form a district for the purpose aforesaid, and at the same time to nominate one fit and proper person to be returned to the said justices to be appointed as such district surveyor, together with the amount of the yearly salary which the said inhabitants in such vestry assembled shall agree to pay to such district surveyor; which application, with the name of such last-mentioned person shall be forthwith made in writing, signed by the churchwardens of the said parish, or by the chairman of the said vestry as aforesaid, and forwarded to the clerk of the peace in and for the said county, or to the clerk of the justices in and for the said division, as the case may be, who shall lay the same before the justices at the quarter sessions then next holden in and for the said county, or at the special sessions as aforesaid.

*Justices at sessions may unite such parishes into districts and select and appoint a district surveyor.*

XIV. And be it further enacted, that on such application as aforesaid being made by two or more parishes to the said justices, they are hereby authorized at the said quarter sessions or at some special sessions as aforesaid to take the same into their consideration, and to unite such and so many of the parishes so applying as aforesaid, as they shall think fit, into a district or districts for the purposes of this act; and the said justices shall select and appoint out of the persons so nominated as aforesaid by the several parishes so united into one district one fit and competent person to be the surveyor for such district composed as aforesaid, which appointment shall be in writing.

*Names of parishes and of district surveyor to be recorded, and a copy thereof sent to each churchwarden, &c.*

*—Parishes when united to form a district for three years, and until twelve months after any one parish shall give notice of intention to cease to form one of said district.*

XV. And be it further enacted, that the names of the said parishes so united, and the name of the person so appointed as district surveyor, shall be reduced into writing, signed by the chairman of the said quarter sessions, or by the majority of the magistrates present at such special sessions, and shall be transmitted by him or them to the clerk of the peace, who shall lay the same before the justices assembled at the quarter sessions in and for the said county, or at some adjournment thereof, who are hereby authorized and required to cause the same to be enrolled with the records of the court; and a copy thereof shall be sent by such clerk of the peace to each of the churchwardens or the surveyor of each of the said parishes so united; and such parishes so united shall continue to form a district for the purposes of this act for the space of three years then next following, and from thenceforward until the churchwarden of any one of the said parishes so united, or the chairman of the vestry, shall, by direction and in pursuance of a resolution of the inhabitants in vestry assembled, give twelve months notice to the churchwardens and surveyor of each of the other parishes, and to the said district sur-

veyor appointed by the said justices, and to the clerk of the peace of the county in which the said parishes are situate, of the intention of the said parish to cease to form a part of the said district; in which case, from and after the expiration of the said twelve months' notice, the union of the said parishes into such district as aforesaid, and the appointment of the said district surveyor, shall cease and determine so far as may concern or be binding on the said parish so giving such notice as aforesaid.

*District surveyor to have power, &c. of surveyor, except in levying rate.—Salary of district surveyor how to be paid.*

XVI. And be it further enacted, that such district surveyor when so appointed shall for all the purposes of this act, except the making, assessing, and levying the rate in and by this act authorized to be made, assessed, and levied, have, as far as the same are applicable, the same powers, and be subject and liable to the same duties, penalties, and forfeitures, as any surveyor elected under the provisions of this act is invested with and liable to, and shall have the laying out and application of all the funds raised and levied under the authority of this act: provided nevertheless, that such district surveyor shall not expend any monies levied in any one of the said united parishes except for the use and benefit of the parish in which it is so levied, unless with the consent of the inhabitants of such parish in vestry assembled, for the purpose of carrying on repairs or beneficial improvements under the provisions of this act for the common benefit of the said united parishes; and such district surveyor shall annually receive from each of the parishes composing his district respectively such salary as shall have been agreed upon by the several parishes in manner aforesaid, which salary shall be paid to such district surveyor by the surveyor of the highways, out of the money raised in each of such parishes under the authority of this act; and in case of nonpayment thereof, the same shall be recoverable from the surveyors of the highways of such parishes, to and for his own use, in the same manner as any forfeiture is recoverable under this act.

*When parishes are united, a surveyor to be appointed to make rate, &c.*

XVII. And be it further enacted, that in each of the parishes so united into a district as aforesaid a surveyor shall be elected, as herein mentioned, in addition to the district surveyor so appointed as aforesaid: provided nevertheless, that such surveyor shall only be authorized and required to make, assess, and levy the rate herein directed to be made, assessed, and levied, and from time to time pay over the money arising therefrom to such district surveyor.

*Appointment of a board directing repairs in large parishes.—Powers of the board.*

XVIII. And whereas it is expedient in large and populous parishes that the repairs of the highways should be under the direction and controul of a certain number of inhabitants, to be chosen and appointed as a board for that purpose, with necessary powers; be it therefore further enacted, that in any parish where the population by the then last census, taken from the returns made to Parliament, exceeds the number of five thousand, if it shall be determined by a majority of two-thirds of the votes of the vestrymen present at such meeting as aforesaid, to form a board for the superintendence of the highways of the said parish, and for the purpose of carrying the provisions of this act into effect, it shall be lawful for the said vestry to nominate and elect any num-

ber of persons, not exceeding twenty nor less than five, being respectively householders and residing in and assessed to the rate for the relief of the poor of the said parish, and also liable to be rated to the repair of the highways in the said parish under and by virtue of this act, to serve the office of surveyors of the highways for the year ensuing; and such persons so to be nominated and elected as such surveyors or any three of them, shall and are hereby authorized to act as a board, and to be called "The Board for Repair of the Highways in the Parish of \_\_\_\_\_," (as the case may be), and to carry into

effect the powers, authorities, and directions in this act contained; and such board are hereby authorised to appoint a collector, or any number of collectors, of the rates to be made under the authority of this act, and also to employ a person of skill and experience to act as an assistant surveyor to the said board, and also a clerk to attend the said board, and to keep the accounts and minutes of the proceedings thereof; such assistant surveyor and clerk to be paid such reasonable salaries out of the said rates as the said board shall determine; and upon such board being so nominated and elected as aforesaid all and every the powers and authorities given and created by this act, and granted to or vested in the vestry, and in any person or persons as surveyor, shall, for the purposes of the parish so nominating and electing such board, be and the same are hereby declared to be vested in the said persons so to be elected, or any three of them acting as such board as aforesaid; and such persons, or any three of them at a meeting to be convened for that purpose, may and they are hereby authorized to nominate and appoint a fit and proper person to be treasurer for the deposit of the monies to be collected for the purposes of this act, and to take from such person good and sufficient security for the monies to be deposited in his hands as aforesaid; and all monies to be drawn from such treasurer for the purposes of this act shall be drawn by drafts or cheques to be signed by the said persons so to be nominated and elected as aforesaid, or any three of them, at some one of their meetings to be held under this act, and such drafts shall be respectively signed and entered in their books by the said clerk to be appointed as aforesaid: provided always, and it is hereby declared, that upon the expiration of the year for which such board shall be elected as aforesaid, and before or on the day for the nomination and election of persons as surveyors under the authority of this act, the said board shall and are hereby directed to present to the vestry of the parish for which they shall have acted copies of all their accounts, and also of the minutes of their proceedings during the preceding year.

*Board may hire or purchase premises.*

XIX. And be it further enacted, that it shall and may be lawful to and for such board to rent, or with the consent of the vestry of any parish to purchase, a fit and convenient piece of ground or other premises for the keeping of the implements and materials necessary for the reparation of the highways, or for the preparing the materials for the same respectively, and to determine and direct how and in what manner the highways in the said parish, or any or either of them, or any and what part or parts thereof, shall be curbed or paved with stone or otherwise.

*Penalty on surveyor, &c. for neglect of duty.*

XX. And be it further enacted, that if any surveyor or district surveyor, or assistant-surveyor shall neglect his duty in any thing required of him by

this Act, for which no particular penalty is imposed, he shall forfeit for every such offence any sum not exceeding five pounds.

*As to repair of highways adjoining bridges hereafter to be built.—Raised causeways, &c.*

XXI. And be it further enacted, that if any bridge shall hereafter be built, which bridge shall be liable by law to be repaired by and at the expense of any county or part of any county,\* then and in such case all highways leading to, passing over, and next adjoining to such bridge shall be from time to time repaired by the parish, person, or body politic or corporate, or trustees of a turnpike road, who were by law before the erection of the said bridge bound to repair the said highways: provided nevertheless, that nothing herein contained shall extend or be construed to extend to exonerate or discharge any county or any part of any county from repairing or keeping in repair the walls, banks, or fences of the raised causeways and raised approaches to any such bridge, or the land arches thereof.†

*Powers for getting materials and preventing nuisances to extend to county bridges and roads at the ends thereof.*

XXII. And be it further enacted, that the several powers and authorities hereby vested in the surveyor of highways, as well for the getting of materials, as the preventing and removing of all nuisances and annoyances, shall be and the same are hereby vested in the surveyor of county bridges, and the roads at the ends thereof repairable therewith; and the several penalties, forfeitures, matters, and things in this act contained relating to highways shall be and the same are hereby extended and applied, as far as the same are applicable, to such bridges, and the roads at the ends thereof as aforesaid, the said surveyor or surveyors of county bridges making satisfaction and compensation for all trespass and damage done in the execution of the powers of this act, in such

\* Counties are liable to the repair of public bridges, by the common law, *Rex v. Inhab. Salop*, M. 51 Geo. 3, c. 13. A particular individual is only bound to repair a bridge by tenure or prescription, and not by the common law; hence, if a man make a bridge for the public good, he is not bound to repair it, 2 Inst. 701. If of public utility, the county is bound to repair, *R. v. W. R. York*, 5 Burr. 2594. If built by a private individual, after public use of 40 years, county may be compelled to repair, *R. v. Glamorgan*, 2 East 356, but not if erected in an improper manner, or for the express purpose of casting the expence on the county. The county is liable to repair a bridge used only in cases of emergency, as in floods; see *R. v. Devon*, R. & M. 144. When county is liable to repair a bridge also liable to the repair of highway to the extent of 300 feet at each end of bridge. *York v. R.* 2 Dow. 1. 5 Taunt. 284.

† County not liable to repair arches through which a running stream does not pass, and more than 300 feet from the bridge, *R. v. Oxfordshire*, 1 B. & A. 289. The following statutes regulate the repair &c. of county bridges:—22 H. 8 c. 5—5. W. & M. c. 11,—1 Anne, St. 1,—12 G. 2, c. 29,—14 G. 2, c. 33.—43 G. 3, c. 59,—52 G. 3, c. 110,—55 G. 3, c. 143. Persons destroying or damaging public bridges are guilty of a misdemeanour, 2 E. P. C. 1081; see also § 72 of this act, and in an indictment for such misdemeanour it will be sufficient to state the property to belong to “the inhabitants” of such county.

and the same manner as the surveyors of highways are required to make under the provisions of this act.

*When new highways are to be kept in repair by parishes. Proviso.*

XXIII. And be it further enacted, that no road or occupation way made or hereafter to be made by and at the expense of any individual or private person, body politic or corporate, nor any roads already set out or to be hereafter set out as a private driftway or horsepath in any award of commissioners under an inclosure act, shall be deemed or taken to be a highway which the inhabitants of any parish shall be compellable or liable to repair, unless the person, body politic or corporate, proposing to dedicate such highway to the use of the public shall give three calendar months previous notice in writing to the surveyor of the parish of his intention to dedicate such highway to the use of the public,\* describing its situation and extent, and shall have made or shall make the same in a substantial manner and of the width required by this act, and to the satisfaction of the said surveyor and of any two justices of the peace of the division in which such highway is situate in petty sessions assembled, who are hereby required, on receiving notice from such person or body politic or corporate to view the same, and to certify that such highway has been made in a substantial manner, and of the width required by this act, at the expense of the party requiring such view, which certificate shall be enrolled at the quarter sessions holden next after the granting thereof, then and in such case, after the said highway shall have been used by the public, and duly repaired and kept in repair by the said person, body politic or corporate, for the space of twelve calendar months, such highway shall for ever thereafter be kept in repair by the parish in which it is situate: provided nevertheless, that on receipt of such notice as aforesaid the surveyor of the said parish shall call a vestry meeting of the inhabitants of such parish, and if such vestry shall deem such highway not to be of sufficient utility to the inhabitants of the said parish to justify its being kept in repair at the expense of the said parish, any one justice of the peace, on the application of the said surveyor, shall summon the party proposing to make the new highway to appear before the justices at the next special sessions for the highways to be held in and for the division in which the said intended highway shall be situate; and the question as to the utility as aforesaid of such highway shall be determined at the discretion of such justices.

*Direction posts, where and how to be erected.*

XXIV. And be it further enacted, that the surveyor of every parish, other than a parish the whole or part of which is within three miles of the General Post Office in the city of London, shall, with the consent of the inhabitants of any parish in vestry assembled, or by the direction of the justices at a special sessions for the highways, cause (where there are no such stones or posts) to be erected or

\* Adoption by the parish is unnecessary where a way has been assigned by an act of parliament for making streets &c. *R. v. Lyon*, 5 D. & R. 497; and a road dedicated and used by the public, becomes a highway, which the parish is liable to repair, without its acquiescence or adoption, *R. v. Leake* 5, B. & A. 469. If the public have free passage through a street in London for eight years, a general dedication to the public will be presumed, *Rugby Charity v. Merriweather*, 11 East 376 n.

fixed in the most convenient place where two or more ways meet a stone or post, with inscriptions thereon in large legible letters, not less than one inch in height, and of a proper and proportionate breadth, containing the name of the next market town, village, or other place to which the said highways respectively lead, as well as stones or posts to mark the boundaries of the highway, containing the name of the parish wherein situate; and that the surveyor of every parish shall, at the several approaches or entrances to such parts of any highways as are subject to deep or dangerous floods, cause to be erected graduated stones or posts, as he shall judge to be necessary, for the guiding of travellers in the best and safest track through the floods; and also to secure horse causeways and foot causeways, by posts, blocks, or stones fixed in the ground, or by banks of earth cast up or otherwise, from being passed over and spoiled by waggons, wains, carts, or carriages; and the said surveyor shall be reimbursed, out of the monies which shall be received by him pursuant to the directions of this act, the expenses of providing and erecting and of keeping in repair such stones, posts, or blocks already erected or fixed, or which may hereafter be erected or fixed.

*Power to use adjoining ground as a temporary road.*

XXV. And be it further enacted, that it shall be lawful for the surveyor to make a road through the grounds adjoining to any ruinous or narrow part of any highway (not being the site or ground whereon any house stands, nor being a garden, lawn, yard, court, park, paddock, plantation, planted walk or avenue to any house, or inclosed ground set apart for building ground or as a nursery for trees), to be made use of as a public highway whilst the old road is repairing or widening, making such recompense to the proprietor and occupier of such grounds for the damages they may thereby sustain as the justices at a special sessions for the highways assembled may think reasonable, such sum so awarded as a recompense to be recoverable in the same manner as any fines and forfeitures are recoverable under this act.

*Surveyor to remove snow, &c.*

XXVI. And be it further enacted, that if any impediment or obstruction shall arise in any highways from accumulation of snow, or from the falling down of the banks on the side of such highways, or from any other cause, the surveyor is required from time to time, and within twenty-four hours after notice thereof from any justice of the peace of the county in which the parish may be situate, to cause the same to be removed.

*Surveyor to make rate.—Rate to be allowed by justices.*

XXVII. And in order to raise money for carrying the several purposes of this act into execution, be it further enacted, that a rate shall be made, assessed, and levied by the surveyor upon all property now liable to be rated and assessed to the relief of the poor; provided that the same rate shall also extend to such woods, mines, and quarries of stone, or other hereditaments, as have heretofore been usually rated to the highways; and provided also, that every such rate shall be signed by the said surveyor, and allowed by two justices of the peace, and published in the same way as poor rates are now allowed and published.

*Surveyor may inspect rate book, and obtain copies or extracts.*

XXVIII. And in order to enable the surveyor to form a proper judgment of any rate to be made in

pursuance of this act, be it further enacted, that it shall be lawful for the surveyor, and he is hereby authorized and empowered, at all reasonable times, to inspect, or by writing signed by him to grant authority to any person appointed by him to inspect, any of the rates made towards the relief of the poor of the parish of which he is surveyor, or the books wherein the assessments thereto shall be entered, without fee or reward; and the surveyor, or person by him authorized as aforesaid, shall be allowed to make a copy of such rate or books, or to make any extracts therefrom; and if any person in whose custody or power any of the said rates or books shall be, shall, when thereunto required in manner aforesaid, refuse or neglect to produce the same to the surveyor, or person so by him authorized as aforesaid, as the case may be, or to allow such copy or extract to be made or taken, at all reasonable hours in the day-time, he shall for every such offence forfeit and pay any sum not exceeding five pounds.

*Form and amount of rate.*

XXIX. And be it further enacted, that every rate shall contain the names of the occupiers, the description of the premises or property they occupy, and the full annual value of such premises or property, and shall also specify the sum in the pound at which it is made; and no rate to be levied or assessed as aforesaid shall exceed at any one time the sum of tenpence in the pound, or the sum of two shillings and sixpence in the pound in the whole in any one year: Provided nevertheless, that with the consent of four-fifths of the inhabitants of any parish contributing to the highway rate, assembled at a meeting specially called for that purpose, ten days previous notice of the same having been given by the surveyor of the said parish, the rate to be levied and assessed as aforesaid may be increased to such sum as the said inhabitants so assembled may think proper.

*Surveyor to have power to enforce composition in certain parishes.*

XXX. Provided always, and be it further enacted, that in parishes in which the overseers of the poor have power by local acts of parliament to compound with or require composition for poor rates from the landlords of certain houses, tenements, or hereditaments, and, in case of their refusal to compound, to rate such landlords as the occupiers, the surveyor shall have the same powers, remedies, and privileges to compound and enforce composition, and, in case of refusal by the landlords, to assess them in the same proportions to the rates authorized to be made by this act, as the overseers of the poor have by such acts for assessing and recovering any rate made for the relief of the poor, or the compositions entered into for the same.

*Errors in rates may be rectified.*

XXXI. And be it further enacted, that whenever it shall appear to the said surveyor as aforesaid that there has been any omission or error in any rate or assessment made in pursuance of this act of or in the name of any person, parson, or vicar, or of any house, shop, warehouse, coach-house, stable, cellar, vault, building, workshop, manufactory, garden ground, land, tenement, wood, tithe, mines, pits or quarries of any mineral, stone, or other matter whatsoever, or hereditament, liable to be rated for the purposes of this act, it shall be lawful for the said surveyor as aforesaid, with the consent and approbation of the justices at a special sessions for the highways, to cause to be added or corrected in the said rate or assessment the name of the person, parson, or vicar, omitted or erroneously stated, and a

description of the property in respect of which he ought to be rated; and every such addition or correction made in any of the said rates, and signed by such justices, shall be as valid and effectual as if the same had been part of the original rate at the time when it was first made.

*Persons may be excused by justices from payment of highway rate.*

XXXII. And be it further enacted, that it shall and may be lawful for the justices at a special sessions for the highways, on application made to them by any person rated to any rate under the authority of this act to be discharged therefrom, on proof of his inability through poverty to pay such rate, the surveyor having been first summoned to appear on the part of the parish, to order and direct that such person shall be excused from the payment of such rate; and which order of the said justices is hereby declared to be final with respect to such rate.

*Certain persons not liable to payment of highway rate.*

XXXIII. And be it further enacted, that when property, or the owner or occupier in respect thereof, has, previous to the passing of this act, been legally exempt from the performance of statute duty, or from the payment of any composition in lieu thereof, or of highway rate, the said property and the owners and occupiers thereof shall be exempt from the payment of the rate hereby imposed.

*Rates how to be recovered.*

XXXIV. And be it further enacted, that, for levying and recovering the said rate by this act authorized to be made, the surveyor shall have the same powers, remedies, and privileges as the overseers of the poor in the parish have by law for the recovery of any rate made for the relief of the poor.

*Rate-payers may divide among themselves the conveyance of stone, &c., for repair of highways, which shall be paid for by the surveyor.*

XXXV. And be it further enacted, that it shall be lawful for two ratepayers of any parish, within six days next after the annual appointment of the surveyor, by a notice in writing, to require the said surveyor to call a meeting of the ratepayers of the said parish for the purpose hereafter mentioned, and the said surveyor shall call such meeting within eight days after the receipt of such notice, and shall give six days previous intimation of such meeting; and if at such meeting a majority of the ratepayers then and there assembled shall signify their consent thereto, it shall and may be lawful for the ratepayers keeping a team or teams of two or more horses or beasts of draught to divide among themselves, in proportion to the amount of rate to which they may respectively be assessed, the carrying of the material which may be required by the said surveyor for the repairs of the highways within such parish, and that they shall be paid by the said surveyor for such carrying or task-work, within one calendar month after having performed such service, after such rate per cubic yard of material per mile, and so in proportion for any less distance than a mile, as shall be fixed by the justices at their first meeting in special sessions for the highways after the twenty-fifth day of March in every year, which rate the said justices are hereby required to fix at such special sessions: Provided always, that such carrying or task-work shall be performed at such times and places and in such manner as the said surveyor may direct (the periods of spring, seed-time, and harvest always excepted); and that in case the said surveyor shall not approve of the manner in which such carrying or

task-work shall be performed, it shall be lawful for the justices at a special sessions for the highways to bear the complaint of such surveyor in that respect, and to award such pecuniary redress or forfeiture against the party offending as to them shall appear reasonable.

*Surveyor, with consent of vestry, may appoint collector of rates.*

XXXVI. And be it further enacted that the surveyor of any parish, the consent of the majority of the inhabitants in vestry assembled being first had and obtained, may from time to time appoint any number of collectors of the said rates, and may remove any such collector and appoint another in his stead, and make such allowance to such collector, out of the monies to be received under this act, as the said inhabitants in vestry assembled shall think reasonable; and the said collector is hereby declared to have all the same powers, remedies, and privileges for the levying and enforcing the payment of such rates as the surveyor nominated or appointed under the authority of this act.

*Security to be taken from collector.*

XXXVII. And be it further enacted, that it shall be lawful for the said surveyor and he is hereby required to take security from every collector appointed by virtue of this act, for the due execution of his office of collector, which security shall be to the full amount of the sum likely to be in the hands of the said collector at any one time, and shall be by bond without stamp.

*Collector to make out accounts of all monies received under this act, &c.*

XXXVIII. And be it further enacted, that every collector appointed by virtue of this act shall under his hand, and at such time and in such manner as the surveyor may direct, deliver to the said surveyor as aforesaid true and perfect accounts in writing of all monies which shall have been by such collector received by virtue of this act, and also a list of the names of all such persons as shall have neglected or refused to pay their respective rates, and of the monies due from them respectively; and that every such collector shall pay all such monies as shall remain due from him to the said surveyor as aforesaid; and if any such collector shall refuse or neglect to make and render such account, or to produce and deliver up the list of persons neglecting and refusing to pay their rates as aforesaid, or to make payments as aforesaid, or shall refuse or wilfully neglect to deliver to the said surveyor as aforesaid, or to such person as he shall appoint to receive the same, within three days after being thereunto required by the said surveyor as aforesaid by notice in writing under his hand given to or left at the usual place of abode of such collector, all books, papers, and writings in his custody or power relating to the execution of this act, or to give satisfaction to the said surveyor as aforesaid respecting the same, then and in every such case, upon complaint made by the said surveyor as aforesaid of any such refusal or wilful neglect as aforesaid, to any justice of the peace, such justice may and he is hereby authorized and required to issue a summons under his hand for the collector so refusing or neglecting to appear before any two justices of the peace; and upon the said collector appearing, or having been so summoned and not appearing without some sufficient or reasonable excuse, or not being found, it shall be lawful for the said two justices to hear and determine the matter; and if, upon confession of the party, or by the testimony of any credible witness on oath, it shall appear to

such justices that any monies remain due from such collector, such justices may and they are hereby authorized and required, upon nonpayment thereof, by warrant under their hands, to cause such money to be levied by distress and sale of the goods and chattels of such collector; and if no goods and chattels of such collector shall be found sufficient to answer and satisfy the said money, and the charges of distraining and selling the said goods and chattels, then and in every such case such justices shall and they are hereby required to commit such offender to the common gaol or house of correction for the county, city, or place where such offender shall be or reside, there to be kept to hard labour for a period not exceeding six calendar months, or until he shall have paid such monies as aforesaid, or compounded with the surveyor as aforesaid for such money (which composition, the said surveyor, with the consent of the inhabitants in vestry, or, in any parish where they do not meet in vestry, with the consent of the inhabitants contributing to the highway rate at a public meeting assembled, is hereby empowered to make and receive); or if it shall appear to such justices that such collector had refused or wilfully neglected to render and give such accounts, or to produce and deliver the list of persons neglecting and refusing to pay their rates as aforesaid, or that any books, papers, or writings relating to the execution of this act remained in the hands or in the custody or power of such collector, and he refused or wilfully neglected to deliver or give satisfaction respecting the same as aforesaid, then and in every such case such collector shall, on conviction thereof, forfeit for such offence any sum not exceeding twenty pounds, and in default of payment thereof shall be committed to the common gaol or house of correction for the county, city, or place where such offender shall be or reside, there to be kept to hard labour for a period not exceeding four calendar months, or until he shall have given a true and perfect account as aforesaid, and delivered such list as aforesaid, and delivered up such books, papers, and writings, or give satisfaction in respect thereof to the said surveyor: Provided always, that no conviction or imprisonment of such collector as aforesaid shall exonerate or discharge any security taken from him on his appointment as aforesaid.

*Separate accounts to be kept.*

XXXIX. And be it further enacted, that the surveyor in every parish shall keep separate and distinct accounts of the monies levied for the highway rate; and such accounts shall specify the different sums, and the times when and the persons to whom and by whom the same shall have been collected and paid.

*Surveyor to keep books and accounts of monies received, &c.; to be open to inspection of rated inhabitants.*

XL. And be it further enacted, that the said surveyor, district surveyor, or assistant surveyor, as the case may be, shall and he is hereby required from time to time to keep a book, in which shall be entered a just and true and particular account of all money which shall have come to his hands as surveyor, district surveyor, or assistant surveyor of the parish for the purposes of this act, and to whom, and on what occasion, and for what work, and in what place, and on what day he shall have paid or applied the same, and also an account of all tools, materials, implements, and other things provided by him for the repair of the said highways; and such book shall at all reasonable times be open to the inspection of every inhabitant rated to the highway rate of the parish, or of any of the parishes united into a district,

without fee or reward, and every such inhabitant may take copies or extracts from the said book, or any part thereof, without paying for the same; and in case the said surveyor, district surveyor, or assistant surveyor shall neglect to provide such book, or to enter therein every sum received or paid by him within one week after the same shall have been received or paid, or shall refuse to permit or shall not permit any such inhabitant as aforesaid at any reasonable time to inspect the same or take copies or extracts as aforesaid, such surveyor, district surveyor, or assistant surveyor shall forfeit and pay any sum not exceeding five pounds for each default, to be levied and applied in manner herein provided.

*The property in all books, &c. to be vested in surveyor for the time being.*

XLI. And be it further enacted, that all the said books, papers, writings, and accounts, and all materials, tools, and implements which shall be provided in pursuance of this act for repairing or preserving the highways, and also the scrapings of the said highways, shall be vested in the surveyor for the time being; or in case a district surveyor shall be appointed, then all such books, papers, writings, and accounts, and all materials, tools, implements, and scrapings shall be invested in the district surveyor.

*Surveyor, on quitting office, to deliver books &c. to succeeding surveyor.—Penalty for neglect.*

XLII. And be it further enacted, that the said surveyor, district surveyor, or assistant surveyor shall, within fourteen days after leaving his office, deliver such books and accounts verified as herein directed, together with all such sums of money as shall be due from him, and likewise all tools, materials, implements and other things as aforesaid to his successor in office, or retain the same in his hands and account for them in his next account if he shall be continued surveyor or district surveyor of such parish in the succeeding year; and in case such surveyor or district surveyor shall neglect to deliver within such time as aforesaid the said books, papers, writings, and accounts, and such tools, materials, implements, and other things, in manner aforesaid, he shall for every such offence forfeit any sum not exceeding five pounds; and in case he shall make default in the paying or accounting for the money so due from him within the time and according to the directions aforesaid, he shall forfeit double the money so due.

*In case of death of surveyor, executors to account.*

XLIII. And be it further enacted, that in case of the death of any such surveyor, district surveyor, or assistant surveyor, before he shall have paid and fully satisfied all the monies which he shall have received by virtue of this act, then and in every such case the executors or administrators of such surveyor, district surveyor, or assistant surveyor, so dying shall pay the same out of his estate and effects unto the succeeding surveyor, district surveyor, or assistant surveyor, in like manner as other debts are directed by law to be discharged by such executors or administrators, and also shall deliver up all books, papers, writings, assessments, tools, materials, and implements, and other things concerning his office, which shall have come to the hands of such executors or administrators, who shall and may plead such payment in any action or suit which may be brought against them on account of the said estate and effects and give the same in evidence; and in case of the nonpayment of such monies, or the nondelivery of such books, papers, writings, assessments, tools,

materials, implements, and things, for the space of one calendar month after demand made thereof in writing by or on behalf of the said succeeding surveyor, it shall be lawful for the said succeeding surveyor to commence and prosecute an action or actions in any of his Majesty's courts of record at *Westminster* against such executors or administrators for the recovery of the said monies, or for the recovery of damages for the detention of such books, papers, writings, assessments, tools, materials, implements, and things, in which action or actions full costs of suit shall be recovered by the said succeeding surveyor.

*Yearly accounts to be made by surveyors, &c. and laid before the justices at a special sessions for the highways.—Subject to appeal.—Surveyors, appointed under the act of 13 G. 3, to pass their accounts at special sessions after 25th of March 1834.*

XLIV. And be it further enacted, that within fourteen days after the election or appointment of surveyor as herein directed, the accounts as aforesaid made in writing, and signed by the surveyor, district surveyor, or assistant surveyor for the year preceding, of all monies received and disbursed by virtue of this act, ending on the day of the election or appointment of surveyor, shall be made up, balanced, and laid before the parishioners in vestry assembled, who may if they think fit, order an abstract thereof to be printed and published; and within one calendar month after the election or appointment of surveyor as herein directed the said accounts shall be signed by the surveyor, district surveyor, or assistant surveyor for the year preceding, and laid before the justices of the peace at a special sessions for the highways holden at the place nearest to the parish or district for which such surveyor shall have been appointed, and such justices are hereby authorized and required to examine him as to the truth of the said accounts or of any charge contained therein: provided always, that if any person chargeable to the rate authorized to be made by this act has any complaint against such accounts or the application of the monies received by the said surveyor, it shall be lawful for any such inhabitant to make his complaint thereof to such justices at the time of the verification of such accounts as aforesaid, and the said justices are hereby required to hear such complaint, and, if they shall think fit, to examine such surveyor upon oath, and to make such order thereon as to them shall seem meet: provided nevertheless, that the several surveyors appointed under the authority of the said act passed in the thirteenth year of the reign of his late Majesty King George the Third shall produce such books and statements and pass their accounts before the justices at a special sessions for the highways to be holden within their respective divisions in the week next after that in which the twenty-fifth day of March shall be in the year of our Lord one thousand eight hundred and thirty-six, and pay the balances thereof to the surveyor to be chosen in pursuance of this act in the same manner as they would have done to the surveyors to have been appointed if this act had not been passed.

*Justices to hold special sessions for purposes of this act.—At such sessions surveyor to verify accounts, and make returns of the state of the roads, &c.*

XLV. And be it further enacted, that it shall and may be lawful for the justices of the peace within their respective divisions, or any two or more of them, and they are hereby required, to hold not less than

eight nor more than twelve special sessions in every year for executing the purposes of this act, the days of the holding thereof to be appointed at a special sessions to be held within fourteen days after the twentieth day of March in every year: provided always, that it shall not be necessary to cause any notice to be given or sent to any justice acting and residing within such limits of the day or time of the holding thereof: and at the said special sessions held next after the twenty-fifth day of March in every year the surveyor of each of the parishes within their respective divisions shall verify his accounts, and shall make a return in writing to such special sessions of the state of all the roads common highways, bridges, causeways, hedges, ditches, and water-courses appertaining thereto, and of all nuisances and encroachments, if any, made upon the several highways within the parish for which he was surveyor, as well as the extent of the different highways which the said parish is liable to repair, what part thereof has been repaired, and with what materials, at what expence, and what was the amount levied during the time he was surveyor of the said parish.

*Surveyor may contract for getting and carrying materials; but not to share in any contract, or let to hire any team, or dispose of any timber, stones, &c. without licence from two justices.—Penalty.*

XLVI. And be it further enacted, that in every parish the surveyor may and is hereby authorized, with the consent of the inhabitants in vestry assembled, to contract for purchasing, getting and carrying the materials required for the repair of the highway; and if any surveyor shall have any part, share or interest directly or indirectly, in any contract or bargain for work or materials to be made, done, or provided upon, for, or on account of any of the highway or other works whatsoever under his care or management, or shall upon his own account, directly or indirectly, use or let to hire any team, or use or sell or dispose of any materials, to be used or employed in making or repairing such highway or other works as aforesaid, (unless a licence in writing for the sale of any such materials, or to let to hire any such team, be first obtained from two justices of the peace in special sessions assembled,) he shall forfeit for every such offence, on conviction, any sum not exceeding ten pounds, and be for ever after incapable of being employed as a surveyor with a salary under the authority of this act.

*Penalty on taking away materials belonging to surveyor.*

XLVII. And be it further enacted, that if any person shall, without the consent of the surveyor take away materials which shall have been purchased, gotten, dug, or gathered for the repair or use of any highway, or any materials out of any quarry which shall have been made dug or opened for the purpose of getting materials for any highway, before the surveyor and his workmen shall have discontinued working therein for the space of six weeks, (except the owner of any private grounds, and persons authorized by such owner to get materials in such quarry for his own private use, and not for sale,) every person so offending shall for every such offence forfeit and pay, on conviction thereof, any sum not exceeding ten pounds.

*Land allotted to the parish for materials, when exhausted may be sold.*

XLVIII. And whereas, under acts of parliament heretofore made and which may hereafter be made for the inclosing of waste land, parcels of land have been and may be expressly allotted to parishes or

to the surveyor of the highways for the purpose of obtaining materials for the repair of the highways in such parish, and the materials in such parcels of land have been and may be exhausted; be it therefore enacted, that in such cases it shall and may be lawful for the surveyor of such parish for the time being, by and with the consent of the vestry, and he is hereby authorized and required, with the consent in writing of the justices of the peace at a special sessions for the highways, to sell and convey to some person whose lands adjoin thereto, or, if he refuse to purchase, to any other person, the said parcels of lands from which the said materials have been so exhausted as aforesaid, at and for such price as the said justices may deem fair and reasonable, and with the money arising therefrom, and with such consent as aforesaid, to purchase other lands in lieu thereof.

*Tenant for life &c. may renounce damages.*

XLIX. And be it further enacted, that it shall be in the power of tenants for life, ecclesiastical and lay corporations, and the proprietors of entailed estates, and of the trustees and guardians of any person under any legal disability or incapacity, to give up and renounce every claim of damage or compensation for such ground and materials as any highway may occupy on their respective properties, and that such renunciation shall be equally binding on the heirs and successors of such persons: provided nevertheless that such renunciation of claim of damage or compensation be in writing, and signed by such tenant for life, proprietor, trustee, or guardian in the presence of two witnesses, or in the case of corporations in such manner and form as is usually adopted by such corporations respectively; and such renunciation shall be enrolled at the quarter sessions which shall be held next after the signing or execution thereof.

*Persons enfeoffed with lands for maintenance of highways, &c. shall let them to farm at the most improved value, with consent of justices.*

L. And be it further enacted, that when any lands or tenements have been or shall be given for maintenance of highways, the profits and proceeds of which are to be applied and disposed of for no other use, intent, or purpose whatsoever, all persons who are or shall be enfeoffed or trusted with any such lands or tenements shall and they are hereby authorized and required to let them to farm at the most improved yearly value, without fine, for any term not exceeding ninety-nine years: provided nevertheless, that previous to the granting of such lease the consent of the justices at a special sessions for the highways, neither of such justices being interested therein, by writing under their hands, shall be obtained as to the amount of rent to be received and the duration of the term.

*Materials where and in what manner to be taken by surveyors.—Power to gather stones without making satisfaction, but satisfaction to be made for damages done by carrying them away.*

LI. And be it further enacted, that it shall and may be lawful for every such surveyor, in any waste land or common ground, river or brook, within the parish for which he shall be surveyor, or within any other parish wherein gravel, sand, stone, or other materials are respectively likely to be found (in case sufficient cannot be conveniently had within the parish where the same are to be employed, and sufficient shall be left for the use of the roads in such other parish), to search for, dig, get, and carry away the same, so that the said surveyor doth not thereby

divert or interrupt the course of such river or brook, or prejudice or damage any building, highway, or ford, nor dig or get the same out of any river or brook within the distance of one hundred and fifty feet above or below any bridge, nor within the like distance of any dam or wear; and likewise to gather stones lying upon any lands or grounds within the parish where such highway shall be, for such service and purpose, and to take and carry away so much of the said materials as by the discretion of the said surveyor shall be thought necessary to be employed in the amendment of the said highways, without making any satisfaction for the said materials, but satisfaction shall be made for all damages done to the lands or grounds of any person or persons by carrying away the same, in the manner hereinafter directed for getting and carrying materials in enclosed lands or grounds; but no such stones shall be gathered without the consent of the owner of such lands or grounds, or a license for that purpose from two justices at a special sessions for the highways, after having summoned such owner to come before him, and heard his reasons, if he shall appear and give any, for refusing his consent.

*Not to extend to sea beach, &c.*

LII. Provided always, and be it further enacted, that nothing in this act contained relative to the gathering or getting or stones or other materials shall extend to any quantity of stones or other materials thrown up by the sea, commonly called beach, where the removal of the same would cause any damage or injury by inundation to the lands adjoining, or increased danger of encroachment by the sea.

*Notice to be given before materials are taken from private lands.—If the occupier shows cause against the removal, two justices shall decide thereon.*

LIII. And be it further enacted, that it shall not be lawful for any surveyor, or any other person acting under the authority of this act, to dig, gather, get, take, or carry away any materials for making or repairing any highway out of or from any inclosed land or ground, until one calendar month's notice in writing, signed by the surveyor, shall have been given to the owner of the premises from which such materials are intended to be taken, or to his known agent, and to the occupier of the premises from which such materials are intended to be taken, or left at the house or last or usual place of abode of such owner or agent, and also of such occupier, to appear before the justices at a special sessions for the highways, to show cause why such materials shall not be had therefrom; and in case such owner, agent, or occupier shall attend pursuant to such notice, but shall not show sufficient cause to the contrary, such justices shall, if they think proper, authorize such surveyor or other person to dig, get, gather, take, and carry away such materials at such time or times as to such justices shall seem proper; and if such owner, agent, or occupier shall neglect or refuse to appear by himself or his agent, the said justices shall and may (upon proof on oath of the service of such notice) make such order therein as they shall think fit as fully and effectually to all intents and purposes as if such owner or occupier, or his agent, had attended.

*If sufficient materials cannot be found in waste lands, &c. surveyor may take them from the several or inclosed lands or grounds, making satisfaction to the owners.*

LIV. And be it further enacted, that it shall be lawful for every such surveyor, for the use aforesaid, by license in writing from the justices at a special sessions for the highways, to search for, dig, and get

materials, if sufficient cannot be had conveniently within such waste lands, common grounds, rivers, or brooks, in or through any of the several or inclosed lands or grounds of any person whomsoever (such lands or grounds not being a garden, yard, avenue to a house, lawn, park, paddock, or inclosed plantation, or inclosed wood not exceeding one hundred acres in extent), within the parish where the same shall be wanted, or within any other parish adjoining or lying near to the highway for which such materials shall be required, if it shall appear to such justices that sufficient materials cannot be conveniently had in the parish where such highways lie, or in the waste lands or common grounds, rivers or brooks, of such adjacent parish, and that a sufficient quantity of materials will be left for the use of the parish where the same shall be, and to take and carry away so much of the said materials as by the discretion of the said surveyor shall be thought necessary to be employed in the amendment of the said highways; the said surveyor making such satisfaction for the materials which may be got or taken away, and also for the damage done to such lands or grounds by the getting and carrying away the same, as shall be settled and ascertained by order of the justices at a special sessions for the highways.

*If surveyor shall make pits or holes in getting materials' he shall cause them to be filled up or sloped down and fenced off; and in like manner all those already made.*  
—Penalties on surveyor for neglect herein.

LV. And be it further enacted, that if any surveyor or person employed by him shall, by reason of the searching for, digging, or getting any materials for repairing any highways,\* make any pit or hole in lands, common grounds, rivers, or brooks, as aforesaid, wherein such materials shall be found, he shall forthwith cause the same to be sufficiently fenced off, and such fence supported and repaired during such time as the said pit or hole shall continue open, and within three days after such pit or hole shall be opened or made, where no materials shall be found, cause the same to be forthwith filled up, levelled, and covered with the turf or clod which was dug out of the same, and where any such materials shall be found, within fourteen days after having dug up sufficient materials in such pit or hole, cause the same to be filled up or sloped down, and fenced off, if required by the owner of the land or ground, and so continued; and every surveyor shall, within twenty-one days after he shall have been appointed to that office, cause all the said pits and holes which shall then be open and not likely to be further useful, to be filled up or sloped down in manner aforesaid, and if they are likely to be further useful, he shall secure the same by posts and rails or other fences, to prevent accidents to persons or cattle; and in case such surveyor or person shall neglect to fill up, slope down, or fence off such pit or hole in manner and within the time aforesaid, he shall forfeit the sum of ten shillings for every such default; and in case such surveyor or person shall neglect to fence off such pit or hole, or to slope down the same, as hereinbefore directed for the space of six days after he shall have received notice for either of those purposes from any justice of the peace, or from the owner or occupier of such several ground, river, or brook, or any person having right of common within such common or waste lands as aforesaid, and such

neglect and notice shall be proved upon oath before the justices at a special sessions for the highways, such surveyor, person or persons, shall forfeit and pay any sum not exceeding ten pounds for such neglect, to be determined and adjudged by such justices, and to be laid out and applied in the fencing off, filling up, or sloping down such pit or hole, and toward the repair of the roads in the parish where the offence shall be committed, in such manner as the said justices shall direct and appoint; which forfeiture, in case the same be not forthwith paid, shall be levied as other forfeitures are hereinafter directed to be levied.

*Penalty on surveyor allowing any heap of stone, &c., to remain on highway at night.*

LVI. And be it further enacted, that if any surveyor or district surveyor shall lay or cause to be laid any heap of stone or any other matter or thing whatsoever upon any highway, and allow the same to remain there at night to the danger or personal damage of any person passing thereon, all due and reasonable precaution not having been taken by the said surveyor to guard against the same, he shall forfeit for every such offence any sum not exceeding five pounds.

*Surveyor damaging mills, dams, &c., by digging materials, to forfeit not exceeding 5l.*

LVII. And be it further enacted, that if any surveyor shall dig or cause to be dug materials for the highways, whereby any bridge, mill, building, dam, highway, occupation road, ford, mines, or tin works, or other work, may be damaged or endangered, he shall forfeit for every such offence, on conviction, any sum not exceeding five pounds, at the discretion of the justices before whom the complaint thereof shall be made, notwithstanding his liability to any civil action to which he may make himself liable by such act.

*Where a highway lies in two parishes, the justices to determine what parts shall be repaired by each.—Proviso in case of highway repaired by party, ratione tenuræ, &c.*

LVIII. And whereas it frequently happens that the boundaries of parishes pass across or through the middle of a common highway, and one side of such highway is situated in one parish, and the other side in another parish, whereby great inconveniences often arise in repairing the same: be it enacted, that the justices at a special sessions for the highways, on complaint of any surveyor of any parish (stating in writing, and on a plan thereunto annexed, that there is such a highway, one side whereof ought to be repaired by one parish, and the other side by another, and particularly describing the same, by metes, bounds, and admeasurement thereof), may issue their summons, with a copy of such writing and plan thereunto annexed, to the surveyor of such other parish, to appear before them on a day mentioned in such summons; and if the parties appear such justices may then proceed finally to decide the matter, in manner herein mentioned, in case all the parties shall consent thereto; but in case the surveyor summoned shall not appear on such first summons, or appearing shall require further time, such justices shall adjourn the further consideration of the matter for any further time, not more than twenty-one days nor less than fourteen days from the date of such adjournment, of which the surveyor not appearing, or appearing shall require further time, shall have notice, on which day the said justices shall proceed to hear the parties and their witnesses, and, whether the party summoned does or does not appear, shall pro-

\* A surveyor of highways is liable to a reversioner for infringement of a portion of his bank by the roadside, although the property is the better for what the surveyor has done; 9 Bing. 3.

ceed to examine and finally determine the matter in form following; (that is to say) that it shall and may be lawful for such justices, and they are hereby required to divide the whole of such common highway, by a transverse line crossing such highway, into equal parts, or into such unequal parts and proportions as, in consideration of the soil, waters, floods, and inequality of such highway, or any other circumstances attending the same, they in their discretion shall think just and right, and to declare, adjudge, and order that the whole of such highway on both sides thereof, in any of such parts, shall be maintained and repaired by one of such parishes, and that the whole thereof on both sides, in the other of such parts, shall be maintained and repaired by the other of such parishes, and shall cause such their order, and a plan of such highway, and the allotment thereof as before-mentioned, to be fairly delineated on paper or parchment, and filed with the clerk of the peace of the county in which such highway shall happen to lie, and shall also cause such posts, stones, or other boundaries to be placed and set up in such highway as in their judgment shall be necessary for ascertaining the division and allotment thereof: Provided nevertheless, that in the case of any such last-mentioned highway, the repair of any part of which belongs to any body politic or corporate, or to any person, by the reason of tenure of any lands, or otherwise howsoever, the same proceedings may be adopted, but the said body politic or corporate, or person, or some one on their behalf, may appear before such justices, and object to such last-mentioned proceedings, in which case the said justices shall, before they divide such highway as aforesaid, hear and consider the objection so made, and determine the same.

*Parishes, &c. bound to repair the part so allotted.*

LIX. And be it further enacted, that from and after such order and plan shall be so filed with the clerk of the peace as aforesaid, such parishes, and body politic or corporate, or person aforesaid respectively, shall be bound as of common right to maintain and keep in repair such parts of such highways, so allotted to them as aforesaid, and shall be liable to be proceeded against for neglect of such duty, and shall in all respects whatsoever be liable and subject to all the provisions, regulations, and penalties contained in this act, and also shall be discharged from the repair of such part of such highway as shall not be included in their respective allotment.

*How costs of proceedings shall be defrayed, &c.*

LX. And be it further enacted, That all costs, charges, and expenses, to be incurred by reason of any of the proceedings last mentioned shall be borne and defrayed by such two parishes, or body politic or corporate, or person aforesaid, the same being settled and ascertained and duly apportioned between such parishes by such justices; and in case the said parties shall refuse or neglect to pay and discharge their respective share of such costs and expenses, it shall and may be lawful for the justices at a special sessions for the highways to levy the same by distress and sale, with costs of such distress, on the goods and chattels of any surveyor of the parish, or of any body politic or corporate, or person aforesaid, so refusing or neglecting to defray such costs and charges as aforesaid.

*Boundary of counties, &c. not to be changed except for the purpose aforesaid.*

LXI. And be it further enacted, That nothing herein contained shall extend or be construed to extend to affect, change, or alter in any manner what-

soever any boundaries of counties, lordships, hundreds, manors, or any other division of public or private property, nor the boundaries of any parishes or townships, otherwise than for the purpose of amending and keeping in repair such particular portion of the highway in the manner herein mentioned.

*Highway repaired by party, ratione tenuræ, &c. may be made a parish highway.*

LXII. And be it further enacted, That any body politic or corporate, or any person, liable to repair any highway by reason of tenure of any lands, or otherwise howsoever, or the surveyor of the parish in which the said highway is situate, may, if he or either party shall think proper, having first obtained the consent of the inhabitants in vestry assembled, apply to any justice for the purpose of making the said highway a parish highway, and to be repaired by the surveyor of the said parish; and the said justice is hereby authorized and required to issue his summons, requiring the said surveyor, or the party so liable to repair the said highway as aforesaid, to appear before the justices at the next special sessions for the highways, and if both parties appear such justices may then proceed to determine the matter; but in case the surveyor or party summoned shall not appear on such first summons, or appearing shall require further time, such justices shall adjourn the further consideration of the matter to the next special sessions for the highways, of which the said surveyor or party not appearing shall have notice, on which day the justices so assembled at such special sessions shall proceed to hear the parties and their witnesses, and whether the surveyor or party summoned do or do not appear, shall proceed to examine and determine the matter; and in case they decide that the said highway shall become a parish highway, and be thereafter repaired by the surveyor of the said parish, they shall, by an order under their hands, fix the proportion of the expenses of repairing the said highway to be annually paid by such body politic or corporate or person as aforesaid to the surveyor of the said parish; and the order of the said justices shall be binding on the surveyor and the said parish, and the said body politic or corporate or person as aforesaid, their heirs, successors, and assigns: Provided nevertheless, that the said justices, instead of fixing the proportion of the expenses of repairing the said highway to be annually paid as aforesaid, may, by an order under their hands, fix a certain sum to be paid by such body politic or corporate or person as aforesaid to the surveyor of the said parish in full discharge of all claims thereafter in respect of the repairs of such highway; and in default of payment of such last-mentioned sum or of such annual sum as aforesaid the said surveyor may proceed for the recovery thereof in the same manner as any penalties and forfeitures are recoverable under this act: Provided always, that when the sum so fixed to be paid in full discharge of all claims thereafter in respect of the repair of such highways shall exceed the sum of one hundred pounds, the said sum when received shall be vested, in the name of the minister, churchwardens, and surveyors of the highways of the parish within which such highway shall be situate, in some public government securities, and the interest and dividends from time to time arising or accruing therefrom shall be applied towards the repairs of the highways within the said parish: Provided also, that when the sum so fixed to be paid in full discharge of all claims as aforesaid shall not exceed the sum of one hundred pounds, the said last-mentioned sum, or any part thereof, on

the application by and with the consent of the inhabitants of the parish in vestry assembled, and of the justices in special session assembled, shall and may be paid to the surveyor of the said parish, to be applied towards the repair of the highways within the said parish.

*What shall be deemed the centre of the highway.*

LXIII. And be it further enacted, That where in this act any matter or thing is directed or forbidden to be done within a certain distance of the centre of the highway,\* that portion of ground shall be deemed and taken to be the highway which has been maintained by the surveyor as highway, and repaired with stones or other materials used in forming highways, for the six months immediately preceding; and the centre of the highway shall be the middle of such highway, where a line being drawn along the highway, or a point marked, an equal number of feet of highway which have been so maintained and repaired as aforesaid for twelve months before shall be found on each side of such line or mark.

*No tree, &c. allowed to be planted within fifteen feet of the centre of the carriage-way.*

LXIV. And be it further enacted, That no tree, bush, or shrub shall hereafter be planted on any carriageway or cartway, or within the distance of fifteen feet from the centre thereof;† but the same shall respectively be cut down, grubbed up, and carried away by the owner or occupier of the land or soil within twenty-one days after notice to him or his agent by the surveyor, on pain of forfeiting for every neglect the sum of ten shillings.

*Mode of proceeding if highway is prejudiced by hedges, &c.*

LXV. And be further enacted, That if the surveyor shall think that any carriageway or cartway is prejudiced by the shade of any hedges, or by any trees (except those trees planted for ornament or for shelter to any hop ground, house, building, or court yard of the owner thereof,) growing in or near such hedges or other fences, and that the sun and wind are excluded from such highway, to the damage thereof, or if any obstruction is caused in any carriageway or cartway by any hedge or tree, it shall be lawful for any one justice of the peace, on the application of the said surveyor, to summon the owner of the land on which such hedges or trees are growing, next adjoining to such carriageway or cartway, to appear before the justices at a special sessions for the highways to show cause why the said hedges are not cut, pruned, or plashed, or such trees not pruned or lopped, in such manner that the carriageway or cartway shall not be prejudiced by the shade thereof, and that the sun and wind may not be excluded from such carriageway or cartway to the damage thereof, or why the obstruction caused in such car-

riageway or cartway should not be removed; and the question as to the cutting, pruning, or plashing such hedges, or the pruning and lopping such trees, or the removal of such obstruction as aforesaid, shall, upon proof of the service of such summons, and whether the said owner attend or not, be determined at the discretion of such last-mentioned justices; and if such justices shall order and direct that such hedges shall be cut, pruned, or plashed, or such trees pruned or lopped, in manner aforesaid, or such obstruction removed, the said owner shall comply therewith within ten days after a copy of such order shall have been left at the usual place of abode of the said owner, or of his steward or agent, and in default thereof shall forfeit, on conviction, a sum not exceeding forty shillings; and the said surveyor, if the order of the said justices is not complied with, shall and he is hereby authorized and required to cut, prune, or plash such hedges, and to prune and lop such trees, for the benefit and improvement of the highway, and to remove such obstruction as aforesaid, to the best of his skill and judgment, and according to the true intent and meaning of this act; and the said surveyor shall be reimbursed by the owner as aforesaid what charges and expenses he shall be at in cutting, pruning, and plashing such hedges, and pruning and lopping such trees, and the removal of such obstruction, over and above the said forfeiture; and it shall and may be lawful for the justices at a special sessions for the highways, upon proof to them made upon oath, to levy as well the expenses of cutting, pruning, and plashing such hedges, or pruning and lopping such trees, or removal of such obstructions as aforesaid, as the several and respective penalties hereby imposed, by distress and sale of the offender's goods and chattels, in such manner as distresses and sales for forfeitures are authorized and directed to be levied by virtue of this act.

*Time of cutting hedges and trees.*

LXVI. Provided always, and be it further enacted, That no person shall be compelled nor any surveyor permitted to cut or prune any hedge at any other time than between the last day of September and the last day of March; and that no person shall be obliged to fell any timber trees growing in hedges at any time whatsoever except where the highways shall be ordered to be widened or enlarged as herein mentioned, or then to cut down or grub up any oak trees growing in such highway or in such hedges except in the months of April, May, or June, or any ash, elm, or other trees, in any other months than December, January, February, or March.

*Surveyor to make and keep open ditches, &c. and to lay trunks, &c. through lands adjoining highway, paying for damage if any incurred.*

LXVII. And be it further enacted, That the said surveyor, district surveyor, or assistant surveyor, shall have power to make, scour, cleanse, and keep open all ditches, gutters, drains, or water-courses, and also to make and lay such trunks, tunnels, plats, or bridges, as he shall deem necessary, in and through any lands or grounds adjoining or lying near to any highway, upon paying the owner or occupier of such lands or grounds, provided they are not waste or common, for the damages which he shall sustain thereby, to be settled and paid in such manner as the damages for getting materials in inclosed lands or grounds are herein directed to be settled and paid.

*Owner, occupier, &c. not to alter such ditches without consent.*

LXVIII. And be it further enacted, That if any

\* A "road" is the surface over which the public have a right to pass; 2. T. R. 234. Ownership of land adjoining either side of a road is *prima facie* evidence of a right to the soil extending to the centre of the road; 11 Price 736. The presumption is that waste land which adjoins to a road, belongs to the owners of the adjoining land, and not to the Lord of the Manor; 2 Starke. 463.

† The Stat. 41. G. 3. c. 109, s. 9, enacts "that it shall not be lawful for any person to set up or erect any gate across any such carriage road, or to plant any tree in or near the hedges or sides thereof, at a less distance from each other than 50 yards.

owner, occupier, or other person shall alter, obstruct, or in any manner interfere with any such ditches, gutters, drains, or watercourses, trunks, tunnels, plats, or bridges, after they shall have been made by or taken under the charge of such surveyor or district surveyor, and without his authority and consent, such owner, occupier, or other person shall be liable to reimburse all charges and expenses which may be occasioned by reinstating and making good the work so altered, obstructed, or interfered with, and shall also forfeit any sum not exceeding three times the amount of such charges and expenses.

*Penalty for encroaching on highway.*—Encroachment to be taken down by the surveyor.

LXIX. And be it further enacted, That if any person shall encroach by making or causing to be made any building, hedge, ditch, or other fence on any carriageway or cartway within the distance of fifteen feet from the centre thereof, every person so offending shall forfeit, on conviction, for every such offence any sum not exceeding forty shillings; and the surveyor who hath the care of any such carriageway or cartway shall and is hereby required to cause such building, hedge, ditch, or fence to be taken down or filled up at the expense of the person to whom the same shall belong; and it shall and may be lawful for the justices at a special sessions for the highways upon proof to them made upon oath, to levy as well the expenses of taking down such building, hedge, or fence, or filling up such ditch as aforesaid, as the several and respective penalties hereby imposed, by distress and sale of the offender's goods and chattels, in such manner as distresses and sales for forfeitures are authorized and directed to be levied by virtue of this act.

*Steam Engines, &c., not to be erected within a certain distance of roads.*

LXX. And be it further enacted, That from and after the commencement of this Act it shall not be lawful for any person to sink any pit or shaft, or to erect or cause to be erected any steam engine, gin, or other like machinery, or any machinery attached thereto, within the distance of twenty-five yards, nor any windmill within fifty yards, from any part of any carriageway or cartway, unless such pit or shaft or steam engine, gin, or other like engine or machinery, shall be within some house or other building, or behind some wall or fence, sufficient to conceal or screen the same from the said carriageway or cartway, so that the same may not be dangerous to passengers, horses, or cattle; nor shall it be lawful for any person to make or cause to be made any fire for calcining or burning of ironstone, limestone, bricks, or clay, or the making of cokes, within the distance of fifteen yards from any part of the said carriageway or cartway, unless the same shall be within some house or other building, or behind some wall or fence, sufficient to screen the same from the same carriageway or cartway as aforesaid; and in case any person shall offend in any of the cases aforesaid, every such person so offending shall forfeit and pay any sum not exceeding five pounds for each and every day such pit, shaft, windmill, steam engine, gin, machine, or fire shall be permitted to continue contrary to the provisions of this act; which said penalties shall be levied, recovered, and applied in such and the same manner as any penalty or forfeiture for any other offence on any highway may be levied, recovered, and applied: Provided, that nothing herein contained shall be construed to restrain any person or persons from using, repair-

ing, rebuilding, or enlarging any windmill, steam engine, gin, or other like machine, or any kiln or other erection used for the purpose of calcining or burning of ironstone, limestone, bricks, or clay, or the making of cokes, which may have been erected and may be in existence at the passing of this act.

*Proprietors of railways to erect gates, &c., where they cross highways.*

LXXI. And be it further enacted, That whenever a railroad shall cross any highway for carts or carriages, the proprietors of the said railroad shall make and maintain good and sufficient gates at each of the said crossings, and shall employ good and proper persons to attend to the opening and shutting of such gates, so that the persons, carts, or carriages passing along such road shall not be exposed to any danger or damage by the passing of any carriages or engines along the said railroad; and any complaint for any neglect in respect of the said gates shall be made within ten days after the said neglect, to one justice, who may summon the party so complained against to appear before the justices at their next Special Sessions for the highways, who shall hear and decide upon the said complaint, and the proprietor so offending shall forfeit any sum not exceeding five pounds.\*

*Penalty on persons committing nuisances by riding on footpaths, &c.; by injuring the road; by damaging banks, causeways, direction posts, milestones, &c.; by making fires; by baiting bulls; by laying timber, &c.; by running of filth.*

LXXII. And be it further enacted, That if any person shall wilfully ride upon any footpath or causeway by the side of any road made or set apart for the use or accommodation of foot passengers; or shall wilfully lead or drive any horse, ass, sheep, mule, swine, or cattle, or carriage of any description, or any truck or sledge upon any such footpath or causeway; or shall tether any horse, ass, mule, swine, or cattle on any highway, so as to suffer or permit the tethered animal to be thereon, or shall cause any injury or damage to be done to the said highway, or the hedges, posts, rails, walls, or fences thereof; or shall wilfully obstruct the passage of any footway; or wilfully destroy or injure the surface of any highway; or shall wilfully or wantonly pull up, cut down, remove, or damage the posts, blocks, or stones fixed by the said surveyor as herein directed; or dig or cut down the banks which are the securities and defence of the said highways; or break, damage, or throw down the stones, bricks, or wood fixed upon the parapets or battlements of bridges, or otherwise injure or deface the same; or pull down, destroy, obliterate, or deface any milestone or post, graduated or direction post or stone, erected upon any highway; or shall play at football or any other game on any part of the said highways, to the annoyance of any passenger or passengers; or if any hawker, higgler, gipsy, or other person travelling shall pitch any tent, booth, stall, or stand, or encamp, upon any part of any highway; or if any person shall make or assist in making any fire, or shall wantonly fire off any gun or pistol,† or shall set fire to or wantonly let

\* A dock company, having a swing bridge on a public highway, are bound to use all reasonable means to facilitate the passing of vessels; and if any one sustains injury in consequence of obstruction, the company is liable in damages; 3 C. & P. 544., 2 Bing. 263, 9 Moore, 439, 1 Nev. M. 690.

† By 7 & 8. G. 4. c. 13., it is enacted that if any

off or throw any squib, rocket, serpent, or other firework whatsoever, within fifty feet of the centre of such carriageway or cartway; or bait, or run for the purpose of baiting, any bull upon or near any highway; or shall lay any timber, stone, hay, straw, dung, manure, lime, soil, ashes, rubbish, or other matter or thing whatsoever upon such highway, to the injury of such highway,\* or to the injury, interruption, or personal danger of any person travelling thereon; or shall suffer any filth, dirt, lime, or other offensive matter or thing whatsoever to run or flow into or upon any highway from any house, building, erection, lands, or premises adjacent thereto; or shall in any way wilfully obstruct the free passage of any such highway; every person so offending in any of the cases aforesaid shall for each and every such offence forfeit and pay any sum not exceeding forty shillings, over and above the damages occasioned thereby.

*Matters laid on or near highway, so as to be a nuisance, to be removed on notice; or on failure, surveyor to dispose of the same by order of a justice.*

LXXIII. And be it further enacted, That if any timber, stone, hay, straw, dung, manure, lime, soil, ashes, rubbish, or other matter or thing whatsoever shall be laid upon any highway so as to be a nuisance, and shall not, after notice given by the surveyor, assistant surveyor, or district surveyor, be forthwith removed, it shall and may be lawful for the surveyor, assistant surveyor, or district surveyor, by order in writing from any one justice, to clear the said highway by removing the said stone, hay, straw, dung, manure, soil, ashes, rubbish, or other matter or thing as aforesaid, and to dispose of the same, and to apply the proceeds arising therefrom towards the repairs of the highway within the parish in which such highway may be situate: Provided nevertheless, that if any soil, ashes, or rubbish shall be laid on any highway, and such soil, ashes, or rubbish shall not be of sufficient value to defray the expense of removing them, the person who laid or deposited such soil, ashes, or rubbish shall repay to the said surveyor, assistant surveyor, or district surveyor the money which he shall have necessarily expended for the removal thereof, which money, in

person shall set or place any spring gun, man trap, or other engine calculated to destroy human life, or inflict grievous bodily harm, with intent that the same or whereby the same may destroy or inflict grievous bodily harm upon a trespasser, or other person, coming in contact therewith, it shall be a misdemeanour.

An action on the case will lie against the person who places dangerous traps baited with flesh in his own ground so near a highway or to another's premises, that dogs passing along the highway, or in his neighbour's premises, must probably be attracted and thereby injured; 9 East, 227.

\* A having a house by the road-side contracted with B. to repair for a stipulated sum; B contracted with C. to do the work, and C. with D. to supply the materials; D's servant placed a quantity of lime in the road, by which the plaintiff's carriage was overturned; held that A. was answerable for the damage sustained; 1 B. & P. 404, see also 2 Taunt. 314.

It is the duty of the occupier of a house having an area fronting the public street, so to fence it as to make it safe to passengers, and it will be no defence to show that the area had always been in the same state, and before the defendant took possession; 3 Camp. 398.

case the same shall not be forthwith repaid, shall be levied as forfeitures are herein directed to be levied.

*Surveyor to impound cattle found straying on highways until the penalty herein imposed and the charges are paid.—Limiting the extent of penalty.—Right of pasturage not taken away.*

LXXIV. And be it further enacted, That if any horse, ass, sheep, swine, or other beast or cattle of any kind shall at any time be found wandering, straying, or lying, or being depastured, on any highway or on the sides thereof, without a keeper, (except on such parts of any road as lead or pass through or over any common or waste or uninclosed ground), any surveyor, or any other person authorized by him, is hereby required to seize and impound every such horse, ass, sheep, swine, or other beast or cattle in the common pound (if any) of the parish where the same shall be found, or in such other place as the surveyor shall have provided or shall provide for that purpose, and the said horse, ass, sheep, swine, or other beast or cattle there to detain until the owner thereof shall for every and each horse, ass, sheep, swine, or other beast or cattle so impounded pay any sum not exceeding one shilling, together with the reasonable charges and expenses, such charges and expenses to be settled by any two justices of the peace, of impounding and keeping the same, to the surveyor of the parish in which the beast so impounded shall have been found, the said sum so paid for each beast to be applied to the repair of the said highway; and in case the said penalty, charges, and expenses shall not be paid within five days after such impounding (notice being thereof first given to the owner, if known at the time), it shall and may be lawful for any two justices of the peace to order every such horse, ass, sheep, swine, or other beast or cattle to be sold, except where it shall be made to appear to such justices that the horse, ass, sheep, swine, or other beast or cattle impounded escaped from any inclosure by any gate or fence being wilfully or negligently left open or destroyed by any person not being owner of such inclosure, nor employed by such owner, or that it arose from accident, and was not wilful, in which case such justices may remit the said penalty; and the money arising from such sale, after deducting the said penalty, and charges and expenses of impounding, keeping, and selling every such horse, ass, sheep, swine, or other beast or cattle, shall be paid to the person whose property the same so sold shall appear to have been; and in case the owner thereof shall not be known, and no application shall be made for the money arising from such sale within one calendar month after such sale shall have taken place, the said money shall be applied, after deducting the said charges and expenses, in the same manner as the said penalty of one shilling is herein directed to be applied: Provided always, that no owner of any horse, ass, sheep, swine, or other beast or cattle impounded as aforesaid shall in any case pay more than the sum of twenty shillings, over and above the charges and expenses of impounding and keeping the same, for any number of horses, asses, sheep, swine, or other beast or cattle impounded at one time: And provided always, that nothing in this act shall be deemed, taken, or construed to extend to take away any right of pasturage which may exist on the sides of any highway.\*

\* The 41 G. 3 c. 109. s. 11, enacts "that after such public and private ways shall have been set out and made, the grass and herbage arising thereon

*Punishing persons guilty of pound-breach.*

LXXV. And be it further enacted, That in case any person shall release or attempt to release any horse, ass, sheep, swine, or other beast or cattle which shall be seized for the purpose of being impounded under the authority of this act from the pound or place where the same shall be so impounded, or in the way to or from any such pound or place, shall pull down, damage, or destroy the same pound or place, or any part thereof, or any lock or bolt belonging thereto or with which the same shall be fastened, or shall rescue or release, or attempt to rescue or release, any distress or levy which shall be made under the authority of this act, until or before such horse, ass, sheep, swine, or other beast or cattle seized or so impounded, or such distress or levy so made, shall be discharged by due course of law, every person so offending shall, upon conviction thereof before any two of his Majesty's justices of the peace, either upon confession of the party or parties offending, or upon oath of one credible witness, forfeit and pay any sum not exceeding twenty pounds, at the discretion of the said justices, and in default thereof be committed by such justices, by warrant under their hands and seals, to the House of Correction of the county wherein the said offence shall have been committed, there to be kept to hard labour for any time, at the discretion of the justices, not exceeding three calendar months.

*Names of owners to be painted on all waggons, &c. in the manner herein mentioned.*

LXXVI. And be it further enacted, That the owner of every waggon, cart, or other such carriage, shall paint or cause to be painted in one or more straight line or lines, upon some conspicuous part of the right or off side of his waggon, cart, or other such carriage, or upon the off-side shafts thereof, before the same shall be used on any highway, his christian name and surname, or the style and title by which he is commonly designated, and the place of his trade or abode, or the christian and surname and place of trade or abode of a partner or owner thereof, at full length, in large legible letters in white upon black or black upon white, not less than one inch in height, and continue the same thereupon so long as such waggon, cart, or other such carriage shall be used upon any highway; and every owner of any waggon, cart, or other such carriage who shall use or allow the same to be used on any highway without the name and descriptions painted thereon as aforesaid, or who shall suffer the same to become illegible, or who shall paint or cause to be painted any false or fictitious name or place of trade or abode on such waggon or cart or other such carriage, shall forfeit and pay, on conviction, for every such offence a sum not exceeding forty shillings, with or without costs, as to the justices before whom the conviction shall take place shall think fit.

*One driver may take charge of two carts, provided they are drawn only by one horse each.*

LXXVII. And be it further enacted, that no one person shall act as the driver of more than two carts, waggons, or other such carriages on any highway: provided always, that it shall and may be lawful for any one person to act as the driver of two carts, waggons, or other such carriages on any highway, and for such carts to pass and travel on any highway be-

ing only under the care and superintendence of such single person: provided always, that such carts, waggons, or other carriages, when under the care of only one person, shall not be drawn by more than one horse each, and the horse of the hinder cart, waggon, or other carriage shall be attached by a rein in length not exceeding four feet to the back of the cart, waggon, or other carriage which shall be foremost; and in case the said horse shall not be so attached, the driver of the said carts, waggons, or other carriages shall forfeit, on conviction, the sum of twenty shillings, to be recovered as other penalties are by this act to be recovered.

*Drivers of waggons or carts not to ride thereon unless some other person guide them.—Drivers causing hurt or damage to others, or quitting the road, or driving carriage without owner's name, or not keeping the left or near side, or interrupting free passage, if not the owner to forfeit 20s; if he be the owner, 40s.—Proceeding if driver will not discover his name.*

LXXVIII. And be it further enacted, that if the driver of any waggon, cart, or other carriage of any kind shall ride upon any such carriage, or upon any horse or horses drawing the same, on any highway, not having some other person on foot or on horseback to guide the same (such carriages and carts as are driven with reins, and are conducted by some person holding the reins of all the horses drawing the same, excepted); or if the driver of any carriage whatsoever on any part of any highway shall by negligence or wilful misbehaviour cause any hurt or damage to any person, horse, cattle, or goods conveyed in any carriage passing or being upon such highway, or shall quit the same and go on the other side of the hedge or fence inclosing the same, or negligently or wilfully be at such distance from such carriage or in such a situation whilst it shall be passing upon such highway that he cannot have the direction and government of the horses or cattle drawing the same, or shall leave any cart or carriage on such highway so as to obstruct the passage thereof; or if any person shall drive or act as the driver of any waggon, cart, or other such carriage not having the owner's name, as hereby required, painted and remaining legible thereon, and shall refuse to tell or to discover the true christian and surname of the owner or principal owners of such waggon, cart, or carriage; or if the driver of any waggon, cart, or other carriage whatsoever, or of any horses, mules, or other beasts of burthen, shall not keep his waggon, cart, or carriage, or horses, mules, or other beasts of burthen, on the left or near side of the road; or if any person shall in any manner wilfully prevent any other person from passing him, or any waggon, cart, or other carriage, or horses, mules, or other beasts of burthen, under his care, upon such highway, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any person, waggon, cart, or other carriage, or horses, mules, or other beasts of burthen, on any highway, or shall not keep his waggon, cart, or other carriage, or horses, mules, or other beasts of burthen, on the left or near side of the road, for the purpose of allowing such passage; or if any person riding any horse or beast, or driving any sort of carriage, shall ride or drive the same furiously so as to endanger the life or limb of any passenger; every person so offending in any of the cases aforesaid, and being convicted of any such offence, either by his own confession, the view of a justice, or by the oath of one or more credible witnesses, before any two justices of the peace, shall, in addition to any civil action to which he may make himself liable, for every such offence forfeit

shall for ever belong to and be the sole right of the proprietors of the lands and grounds which shall next adjoin the said roads and ways on either side thereof, as far as the crown of the road.

any sum not exceeding five pounds in case such driver shall not be the owner of such waggon, cart, or other carriage, and in case the offender be the owner of such waggon, cart, or other carriage, then any sum not exceeding ten pounds, and in either of the said cases shall in default of payment, be committed to the common gaol or house of correction, there to be kept to hard labour, for any time not exceeding six weeks, unless such forfeiture shall be sooner paid; and every such driver offending in either of the said cases shall and may by the authority of this act, with or without any warrant, be apprehended by any person who shall see such offence committed, and shall be conveyed before any justice of the peace, to be dealt with according to law; and if any such driver in any of the cases aforesaid shall refuse to discover his name, it shall and may be lawful for the said justice of the peace before whom he shall be taken, or to whom any such complaint shall be made, to commit him to the common gaol or house of correction, there to be kept to hard labour, for any time not exceeding three months, or to proceed against him for the penalty aforesaid by a description of his person and the offence only, without adding any name or designation, but expressing in the proceedings that he refused to discover his name.

*For securing unknown offenders.*

LXXIX. And whereas offences may be committed against this act by persons whose names are unknown to the surveyor, assistant-surveyor, or district-surveyor, be it therefore enacted, that it shall be lawful for the surveyor, assistant-surveyor or district surveyor, or any person acting under his authority, and such other person as he shall call to his assistance, or any other person witnessing the commission of the offence, without any other authority than this act, to seize and detain such unknown person who shall commit any such offence, and take him forthwith before any justice of the peace, who shall proceed and act with respect to such offence according to the provisions of this act.

*Cartways to be twenty feet wide, horseways eight feet, and footways three feet.*

LXXX. And be it further enacted, that the said surveyor shall and he is hereby required to make, support, and maintain, or cause to be made, supported, and maintained, every public cartway leading to any market town twenty feet wide at the least, and every public horseway eight feet wide at the least, and to support and maintain every public footway by the side of any carriageway or cartway three feet at the least, if the ground between the fences including the same will admit thereof: provided nevertheless, that nothing herein contained shall require any surveyor to make or form any public footway without the consent of the inhabitants in vestry assembled.

*Width of gates across public cartways and horseways.*

LXXXI. And be it further enacted, that if any gate across\* any public cartway shall be less than ten feet wide, or any gate across any public horseway shall be less than five feet wide, clear between the posts thereof, then and in every such case, upon notice in writing from the surveyor to the person to whom such gate shall belong, left at the dwelling-

house of such person or his steward or agent, requiring him to enlarge the same, if such person shall neglect for the space of twenty-one days after such notice shall have been left as aforesaid to remove or enlarge such gate, he shall forfeit a sum not exceeding ten shillings for every day he shall so neglect to remove or to enlarge such gate as aforesaid.

*Justices may order narrow highways to be widened.—*

*Surveyor to agree with owners of lands for recompense, and if they cannot agree the same may be assessed by a jury at the quarter sessions.—On payment of money assessed, ground to be deemed a public highway.—Where there is not money sufficient, a further rate may be made, by order of the justices at their quarter sessions, not exceeding one-third of rate.*

LXXXII. Provided always, and be it further enacted, that where it shall appear, upon the view of two justices of the peace, that any highway is not of sufficient breadth, and might be widened and enlarged, such justices shall and they are hereby empowered, within their respective divisions, to order such highway respectively to be widened and enlarged in such manner as they shall think fit, so that the said highway, when widened and enlarged, shall not exceed thirty feet in breadth; and that neither of the said powers do extend to pull down any house or building, or to take away the ground of any garden, lawn, yard, court, park, paddock, planted walk, plantation, or avenue to any house, or any inclosed ground set apart for building ground or as a nursery for trees; and for the satisfaction of the person, body politic or corporate, who is seised or possessed of or interested in their own right, or in trust for any other person, in the said ground that shall be laid into the said highway respectively so be widened and enlarged, the said surveyor, under the direction and with the approbation of the said justices in writing, shall and is hereby empowered to make an agreement with him for the recompense to be made for such ground, and for the making of such new ditches and fences as shall be necessary, according and in proportion to their several and respective interests therein, and also with any other person, body politic or corporate, that may be injured by the widening and enlarging such highway, for the satisfaction to be made to him respectively as aforesaid; and if the said surveyor, under the direction and with the approbation of the said justices, cannot agree with the said person, body politic or corporate, or if he cannot be found, or shall refuse to treat or take such recompense or satisfaction as shall be offered to them respectively by such surveyor, then the justices of the peace at any general quarter sessions to be holden for the limit wherein such ground shall lie, upon certificate in writing signed by the justices making such view as aforesaid of their proceedings in the premises, and upon proof of fourteen days notice in writing having been given by the surveyor of such parish to the owner, occupier, or other person, body politic or corporate, interested in such ground, or to his guardian, trustee, clerk, or agent, signifying an intention to apply to such quarter sessions for the purpose of taking such ground, shall impanel a jury of twelve disinterested men out of the persons returned to serve as jurymen at such quarter sessions; and the said jury shall, upon their oaths, to the best of their judgment, assess the damages to be given and recompense to be made to the owners and others interested as aforesaid in the said ground for their respective interests, as they shall think reasonable, not exceeding forty years purchase for the clear yearly value of the ground so laid out,

\* A gate erected in a highway is a common nuisance unless it hath continued from time out of mind; 1. Hawk. P. C. c. 75. s. 9. If a man hath a private way without a gate, and a gate be hung up, an action on the case will lie; Litt. Rep. 267.

and likewise such recompence as they shall think reasonable for the making of new ditches and fences on the side of the said highway that shall be so widened and enlarged, and also satisfaction to any person, body politic or corporate, that may be otherwise injured by the widening and enlarging the said highways respectively; and upon payment or tender of the money so to be awarded and assessed to the person, body politic or corporate, entitled to receive the same, or leaving it in the hands of the clerk of the peace of such limit, in case such person, body politic or corporate, cannot be found or shall refuse to accept the same, for the use of the owner or for others interested in the said ground, the interest of the said person, body politic or corporate, in the said ground shall be for ever divested out of them; and the said ground, after such agreement or verdict as aforesaid, shall be esteemed and taken to be a public highway to all intents and purposes whatsoever; saving nevertheless to the owner of such ground all mines, minerals, and fossils lying under the same which can or may be got without breaking the surface of the said highway, and also all timber and wood growing upon such ground, to be felled and taken by such owner within one month after such order shall have been made, or in default thereof to be felled by the said surveyor within the respective months aforesaid, and laid upon the land adjoining, for the benefit of the said owner; and where there shall not appear sufficient money in the hands of the surveyor for the purpose aforesaid, then the said two justices in cases of agreement, or the said court of quarter sessions after such verdict as aforesaid, shall direct the surveyor to make, collect, and levy an equal rate in the same manner as the rate by this act authorized to be made, and to pay the money to the person, body politic or corporate, so interested, in such manner as the said justices or court of quarter sessions respectively shall direct and appoint; and the money thereby raised shall be employed and accounted for, according to the order and direction of the said justices or court of quarter sessions respectively, for and towards the purchasing the land to widen and enlarge the said highway, and for making the said ditches and fences, and also satisfaction for the damages sustained thereby; provided that no such rate to be made in any one year shall exceed one-third part of the rate by this act authorized to be levied, in addition to the rate for the repair of the highways.

*Cost of proceedings, by whom payable.*

LXXXIII. And be it further enacted, That in case such jury shall give in and deliver a verdict for more monies as a recompence for the right, interest, or property of any person, body politic or corporate, in such lands or grounds, or for the making such fence, or for such damage or injury to be sustained by him, as aforesaid, than what shall have been proposed and offered by the said surveyor before such application to the said court of quarter sessions as aforesaid, that then and in such case the costs and expenses attending the said several proceedings shall be borne and paid by the surveyor out of the monies in his hands or to be assessed and levied by virtue and under the powers of this act; but if such jury shall give and deliver a verdict for no more or for less monies than shall have been so offered and proposed by the said surveyor before such application to the said court of quarter sessions, that then the said costs and expenses shall be borne and paid by the person, body politic or corporate, who shall have refused to accept the recompence and satisfaction so offered to him as aforesaid.

*Previous to a highway being stopped up, &c. surveyor to request justices to view the same.*

LXXXIV. And be it further enacted, that when the inhabitants in vestry assembled shall deem it expedient that any highway should be stopped up, diverted, or turned, either entirely or reserving a bridleway or footway along the whole or any part or parts thereof, the chairman of such meeting shall, by an order in writing, direct the surveyor to apply to two justices to view the same, and shall authorize him to pay all the expences attending such view, and the stopping up, diverting, or turning such highway, either entirely or subject to such reservation as aforesaid, out of the money received by him for the purposes of this act.\* Provided, nevertheless, that if any other party shall be desirous of stopping up, diverting, or turning any highway as aforesaid, he shall, by a notice in writing, require the surveyor to give notice to the churchwardens to assemble the inhabitants in vestry, and to submit to them the wish of such person; and if such inhabitants shall agree to the proposal, the said surveyor shall apply to the justices as last aforesaid for the purposes aforesaid; and in such case the expenses aforesaid shall be paid to such surveyor by the said party, or be recoverable in the same manner as any forfeiture is recoverable under this act; and the said surveyor is hereby required to make such application as aforesaid.

*Proceedings for diverting &c. certain highways, and stopping up unnecessary highways.*

LXXXV. And be it further enacted, That when it shall appear upon such view of such two justices of the peace, made at the request of the said surveyor as aforesaid, that any public highway may be diverted and turned, either entirely or subject as aforesaid, so as to make the same nearer or more commodious to the public, and the owner of the lands or grounds through which such new highway so proposed to be made shall consent thereto by writing under his hand, or if it shall appear upon such view that any public highway is unnecessary, the said justices shall direct the surveyor to affix a notice in the form or to the effect of schedule (No. 19.) to this act annexed in legible characters, at the place and by the side of each end of the said highway from whence the same is proposed to be turned, diverted, or stopped up, either entirely or subject as aforesaid, and also to insert the same notice in one newspaper published or generally circulated in the county where the highway so proposed to be diverted and turned, or stopped up, either entirely or subject as aforesaid, (as the case may be,) shall lie for four successive weeks next after the said justices have viewed such public highway, and to affix a like notice on the door of the church of every parish in which such highway so proposed to be diverted, turned, or stopped up, either entirely or subject as aforesaid, or any part thereof, shall lie, on four successive Sundays next after the making such view; and the said several notices having been so published, and proof thereof having been given

\* The repealed statutes required that the justices referred to should be justices "within the limit of the county, riding, division, hundred, city, corporation, precinct, or liberty, where such parish, township, or place, shall lie." By this clause any two justices are authorized to act. The difficulties in summoning the justices of the division to the special sessions are obviated, 1 B. & A. 373, 2 B. & A. 223, 3 B. & A. 414, 5 B. & A. 424, 5 B. & C. 241, 6 B. & C. 110.

to the satisfaction of the said justices, and a plan having been delivered to them at the same time particularly describing the old and the proposed new highway, by metes, bounds, and admeasurement thereof, which plan shall be verified by some competent surveyor, the said justices shall proceed to certify under their hands the fact of their having viewed the said highway as aforesaid, and that the proposed new highway is nearer or more commodious to the public;\* and if nearer, the said certificate shall state the number of yards or feet it is nearer, or if more commodious, the reasons why it is so; and if the highway is proposed to be stopped up as unnecessary, either entirely or subject as aforesaid, then the certificate shall state the reason why it is unnecessary; and the said certificate of the said justices, together with the proof and plan so laid before them as aforesaid, shall, as soon as conveniently may be after the making of the said certificate, be lodged with the clerk of the peace for the county in which the said highway is situated, and shall (at the quarter sessions which shall be holden for the limit within which the highway so diverted and turned or stopped up, either entirely or subject as aforesaid, shall lie, next after the expiration of four weeks from the day of the said certificate of the said justices having been lodged with the clerk of the peace as aforesaid,) be read by the said clerk of the peace in open court; and the said certificate, together with the proof and plan as aforesaid, as well as the consent in writing of the owner of the land through which the new highway is proposed to be made, shall be enrolled by the clerk of the peace amongst the records of the said court of quarter sessions: Provided always, that any person whatever shall be at liberty, at any time previous to the said quarter sessions, to inspect the said certificate and plan so as aforesaid lodged with the said clerk of the peace, and to have a copy thereof, on payment to the clerk of the peace at the rate of sixpence per folio, and a reasonable compensation for the copy of the plan.

*As to stopping up more than one highway connected together.*

LXXXVI. Provided, always, and be it further enacted, That in any case where it is proposed to stop up or divert more than one highway, which highways shall be deemed to be so connected together as that they cannot be separately stopped or diverted without interfering one with the other, it shall be lawful to include such different highways in one order or certificate.†

*Court may confirm order for so doing wholly or in part.*

LXXXVII. Provided also, and be it further enacted, That in the event of any appeal being brought against the whole or any part or parts of any order or certificate for diverting more highways than one, it shall be lawful for the court to decide upon

the propriety of confirming the whole or any part or parts of such order or certificate without prejudice to the remaining part or parts thereof.

*Persons who may think themselves aggrieved if such highway should be ordered to be stopped up, &c. may appeal.*

LXXXVIII. Provided always, and be it further enacted, That when any such certificate shall have been so given as aforesaid it shall and may be lawful for any person who may think that he would be injured or aggrieved if any such highway should be ordered to be diverted and turned or stopped up, either entirely or subject as aforesaid, and such new highway set out and appropriated in lieu thereof as aforesaid, or if any unnecessary highway should be ordered to be stopped up as aforesaid, to make his complaint thereof by appeal to the justices of the peace at the said quarter sessions, upon giving to the surveyor ten days notice in writing of such appeal, together with a statement in writing of the grounds of such appeal, who is hereby required, within forty-eight hours after the receipt of such notice, to deliver a copy of the same to the party by whom he was required to apply to the justices to view the said highway; provided that in all cases where the said surveyor shall have been directed by the inhabitants in vestry assembled to apply to such justices as aforesaid, then the said surveyor shall not be required to deliver a copy of such notice to any party: Provided also, that it shall not be lawful for the appellant to be heard in support of such appeal unless such notice and statement shall have been so given as aforesaid, nor on the hearing of such appeal to go into or give evidence of any other grounds of appeal than those set forth in such statement as aforesaid.

*In case of appeal, jury at sessions to determine whether new highway is nearer, &c.*

LXXXIX. And be it further enacted, That in case of such appeal the justices at the said quarter sessions shall, for the purpose of determining whether the proposed new highway is nearer or more commodious to the public, or whether the public highway so intended to be stopped up, either entirely or subject as aforesaid, is unnecessary, or whether the said party appealing would be injured or aggrieved,\* impanel a jury of twelve disinterested men out of the persons returned to serve as jurymen at such quarter sessions; and if, after hearing the evidence produced before them, the said jury shall return a verdict that the proposed new highway is nearer or more commodious to the public, or that the public highway so intended to be stopped up, either entirely or subject as aforesaid, is unnecessary, or that the party appealing would not be injured or aggrieved, then the said court of quarter sessions shall dismiss such appeal, and make the order herein mentioned for diverting and turning and stopping up such highway, either entirely or subject as aforesaid, or for diverting, turning, and stopping up of such old highway, and purchasing the ground and soil for such new highway, or for stopping up such unnecessary highway either entirely or subject as aforesaid; but if the said jury shall return a verdict that the proposed new highway is not nearer or not more commodious to the public, or that the highway so intended to be stopped up, either entirely or subject as aforesaid, is not unnecessary, or that the party appealing would be injured or aggrieved, then the said

\* This clause makes a most judicious alteration in the law, by which much expence and litigation will be spared; under the old law, the notice to the public, stated that the "order was made," leaving the parties to appeal. The present notice states that application will be "made for an order," and the magistrates who have reviewed, are required to state the facts and assign their reasons.

† Under the old law when more than one highway was to be stopped up, a separate order was required for each. Now no order will be made until after the expiration of the time for appealing, when the order will be conclusive.

\* This is a decided improvement, and will we doubt not give much satisfaction.

court of quarter sessions shall allow such appeal, and shall not make such order as aforesaid.

*Costs awarded in appeal against stopping up &c. highway.*

XC. And be it further enacted, That the court of quarter sessions is hereby authorized and required to award to the party giving or receiving notice of appeal such costs and expences as shall be incurred in prosecuting or resisting such appeal, whether the same shall be tried or not, and such costs and expences shall be paid by the surveyor or other party as aforesaid at whose instance the notice for diverting and turning or stopping up the highway, either entirely or subject as aforesaid, shall have been given; and in case the said surveyor or other party as aforesaid, shall not appear in support thereof, the said court of quarter sessions shall award the costs of the appellant to be paid by such surveyor or other party as aforesaid, and such costs shall be recoverable in the same manner as any penalties or forfeitures are recoverable under this act.

*If no appeal be made, or if dismissed, sessions to make order for diverting, &c. and the old ways may be stopped.—New highway shall afterwards continue a public highway, &c.*

XCI. Provided always, and be it further enacted, That if no such appeal be made, or being made shall be dismissed as aforesaid, then the justices at the said quarter sessions shall make an order to divert and turn and to stop up such highway, either entirely or subject as aforesaid, or to divert, turn, and stop up such old highway, and to purchase the ground and soil for such new highway, or to stop up such unnecessary highway, either entirely or subject as aforesaid, by such ways and means, and subject to such exceptions and conditions in all respects as in this act is mentioned in regard to highways to be widened; and the proceedings thereupon shall be binding and conclusive on all persons whomsoever; and the new highways so to be appropriated and set out shall be and for ever after continue a public highway to all intents and purposes whatsoever; but no old highway (except in the case of stopping up of such useless highway as herein is mentioned) shall be stopped until such new highway shall be completed and put into good condition and repair, and so certified by two justices of the peace upon view thereof, which certificate shall be returned to the clerk of the peace, and by him enrolled amongst the records of the court of quarter sessions next after such order as aforesaid shall have been made pursuant to the directions herein-before contained.

*Party liable to repair old highways to repair new highways.*

XCII. Provided always, and be it further enacted, That in every case in which a highway shall have been turned or diverted under the provisions of this act, the parish or other party which was liable to the repair of the old highway shall be liable to the repair of the new highway, without any reference whatever to its parochial locality.

*Provisions as to widening of a highway to extend to all highways which persons are bound to repair ratione tenure, &c.—Justices to fix annual or other amount payable by party previously bound to repair.*

XCIII. And be it further enacted, that the powers and provisions in this act contained with respect to the widening and enlarging, diverting, turning, or stopping up any highway shall be applicable to all highways which any person, bodies politic or corpo-

rate, is or are bound to repair by reason of any grant, tenure, limitation, or appointment of any charitable gift, or otherwise howsoever; and that when such last-mentioned highways are so widened or enlarged, turned or diverted, the same shall and may, by an order of the justices at a special sessions for the highways, be placed under the control and care of the surveyor of the parish in which such highways may be situate, and shall be from time to time thereafter repaired and kept in repair by the said parish: provided also, that the said highways so widened, enlarged, diverted, or turned shall be viewed by two justices of the peace, who shall make a report thereof to the justices at a special sessions for the highways; and such last-mentioned justices shall, by an order under their hands, fix the proportionate sum which shall be annually paid, or shall fix a certain sum to be paid, by such person, bodies politic or corporate, his or their heirs, successors, or assigns, to the said surveyors of the parish, in lieu of thereafter repairing the said part of the said old highway; and the order of the said last-mentioned justices shall be and continue binding on all such person, bodies politic or corporate, their heirs, successors, or assigns; and in default of payment thereof the said surveyor shall proceed for the recovery of the same in the manner as any penalties and forfeitures are recoverable under this act.

*Mode of proceeding before justices if highway is out of repair.—In what cases justices cannot interfere.*

XCIV. And be it further enacted, that from and after the commencement of this act, if any highway is out of repair or is not well and sufficiently repaired and amended, and information thereof, on the oath of one credible witness, is given to any justice of the peace, it shall and may be lawful for such justice and he is hereby authorized and required to issue a summons requiring the surveyor of the parish, or other person or body politic or corporate chargeable with such repairs, to appear before the justices at some special sessions for the highways in the said summons mentioned, to be held within the division in which the said highway may be situate; and the said justices shall either appoint some competent person to view the same, and report thereon to the justices in special sessions assembled, on a certain day and place to be then and there fixed, at which the said surveyor of the highways or other party as aforesaid shall be directed to attend, or the said justices shall fix a day whereon they or any two of them shall attend to view the said highway; and if to the justices at such special sessions, on the day and at the place so fixed as aforesaid, it shall appear, either on the report of the same person so appointed by them to view, or on the view of such justices, that the said highway is not in a state of thorough and effectual repair, they the said justices at such last-mentioned special sessions shall convict the said surveyor or other party liable to the repair of the said highway in any penalty not exceeding five pounds,\* and shall make an order on the said surveyor, or other person or bodies politic or corporate liable to repair such highway, by which order they shall limit and appoint a time for the repairing of the same; and in default of such repairs being effectually made within the time so limited, the said surveyor, or such other person or body politic or corporate as aforesaid, shall forfeit and pay to some person to be named and appointed in a second order

\* Fines for not repairing roads *ratione tenuræ* are payable to the surveyor of the parish highways; 1 W. Bl., 602.

a sum of money to be therein stated, and which shall be equal in amount to the sum which the said justices shall, on the evidence produced before them, judge requisite for repairing such highway, which money shall be recoverable in the same manner as any forfeiture is recoverable under this act, and such money when recovered shall be applied to the repair of such highway; and in case more parties than one are bound to repair any such highway, the said justices shall direct in their said order what proportion shall be paid by each of the said parties: provided, that if the said highway so out of repair is a part of the turnpike road, the said justices shall summon the treasurer or surveyor or other officer of such turnpike road, and the order herein directed to be made shall be made on such treasurer or surveyor or other officer as aforesaid, and the money therein stated shall be recoverable as aforesaid: provided nevertheless, that the said justices shall not have power to make such order as aforesaid in any case where the duty or obligation of repairing the said highway comes in question.

*Mode of proceeding if obligation to repair is disputed.*

XCV. And be it enacted, that if on the hearing of any such summons respecting the repair of any highway the duty or obligation of such repairs is denied by the surveyor on behalf of the inhabitants of the parish, or by any other party charged therewith, it shall then be lawful for such justices and they are hereby required to direct a bill of indictment to be preferred, and the necessary witnesses in support thereof to be subpoenaed, at the next assizes to be holden in and for the said county, or at the next general quarter sessions of the peace for the county, riding, division, or place wherein such highway shall be, against the inhabitants of the parish or the party to be named in such order for suffering and permitting the said highway to be out of repair; and the costs of such prosecution shall be directed by the judge of assize before whom the said indictment is tried, or by the justices at such quarter sessions, to be paid out of the rate made and levied in pursuance of this act in the parish in which such highway shall be situate: provided nevertheless, that it shall be lawful for the party against whom such indictment shall be so preferred at the quarter sessions as aforesaid to remove such indictment by *certiorari* or otherwise into his Majesty's Court of King's Bench.

*Fines, penalties, and forfeitures how to be levied and applied.*

XCVI. And be it further enacted, that no fine, issue, penalty, or forfeiture for not repairing the highway, or not appearing to any indictment for not repairing the same, shall hereafter be returned into the Court of Exchequer or other court, but shall be levied by and paid into the hands of such person residing in or near the parish where the road shall lie, as the justices or court imposing such fines, issues, penalties, or forfeitures shall order and direct, to be applied towards the repair and amendment of such highway; and the person so ordered to receive such fine shall and is hereby required to receive, apply, and account for the same according to the direction of such justices or court, or in default thereof shall forfeit double the sum received; and if any fine, issue, penalty, or forfeiture to be imposed for not repairing the highway, or not appearing as aforesaid, shall hereafter be levied on any inhabitant of such parish, township, or place, then such inhabitant shall and may make his complaint to the justices at a special sessions for the highways; and the said justices are hereby empowered and authorized, by

warrant under their hands, to make an order on the surveyor of the parish for payment of the same out of the money receivable by him for the highway rate, and shall within two months next after service of the said order on him pay unto such inhabitant the money therein mentioned.

*Justices empowered to award costs to defendant, where information, &c. is withdrawn or dismissed.*

XCVII. And be it further enacted, that if any surveyor or other person shall be summoned before any justice to answer any information or complaint exhibited or made against him touching or concerning any offence committed or alleged to have been committed by such surveyor or other person against the provisions of this act, or for any supposed neglect of duty, in case such surveyor or other person be convicted thereof, such justice shall be authorized and empowered to order the payment by such surveyor or other person of all costs or proceedings against him; but in case such information or complaint shall afterwards be withdrawn or quashed or dismissed, or if the defendant shall be acquitted of the offence or neglect of duty charged against him, it shall be lawful for such justices to order and award that the person exhibiting or making such information or complaint shall pay to the defendant all such costs as to such justice shall seem reasonable; and in default of immediate payment of the sum so awarded, it shall be lawful for such justices to cause the same to be levied by distress and sale of the goods and chattels of the person ordered to pay the same, together with the costs of such distress and sale; and if goods and chattels of such person sufficient to answer the sum so awarded, with such costs as aforesaid, cannot be found, it shall be lawful for such justices to commit such person to the common gaol or house of correction, there to be kept to hard labour, for any time not exceeding one calendar month, unless the sum so awarded, together with all costs and expences, shall be sooner paid and satisfied.

*Court may award costs to the prosecutor.*

XCVIII. And be it further enacted, that it shall and may be lawful for the court before whom any indictment shall be preferred for not repairing highways to award costs to the prosecutor,\* to be paid by the person so indicted, if it shall appear to the said court that the defence made to such indictment was frivolous or vexatious.

*No presentment against inhabitants for highway being out of repair.*

XCIX. And be it further enacted, that from and after the commencement of this act it shall not be lawful to take or commence any legal proceeding, by presentment, against the inhabitants of any parish, or other person, on account of any highway or turnpike road being out of repair.

*Inhabitants and officers in parishes may give evidence.*

C. And be it further enacted, that no person shall be deemed incompetent to give evidence or be disqualified from giving testimony or evidence, in any action, suit, prosecution, or other legal proceedings to be brought or had in any court of law or equity, or before any justice or justices of the peace,

\* A justice of the peace who prosecutes by indictment for the non-repair of a road, the indictment being removed by *certiorari* into the Court of King's Bench, and the defendant found guilty is entitled to his costs under the 5 W. and M. c. 11, s. 3,—5 T. R. 33.

under or by virtue of this act, by reason of being an inhabitant of the parish in which any offence shall be committed, or of being a treasurer, clerk, surveyor, district surveyor, assistant surveyor, collector or other officer appointed by virtue of this act, nor shall such testimony or evidence for any of the reasons aforesaid be rejected or liable to be questioned or set aside.

*Justices may proceed by summons in the recovery of penalties.*

CI. And be it further enacted, that in all cases in which any penalty or forfeiture is recoverable before justices of the peace under this act, it shall and may be lawful for any justice to whom complaint shall be made of any such offence to summon the party complained against before any two justices, and on such summons the said two justices may hear and determine the matter of such complaint, and on proof of the offence convict the offender, and adjudge him to pay the penalty or forfeiture incurred, and proceed to recover the same, although no information in writing shall have been exhibited or taken by or before such justice; and all such proceedings by summons without information shall be as good, valid, and effectual to all intents and purposes as if an information in writing was exhibited.

*Compelling witnesses to attend and give evidence.*

CII. And be it further enacted, that if any person after having been paid or tendered a reasonable sum of money for his costs, charges, and expences, shall be summoned as a witness to give evidence before any justices of the peace touching any matter or fact contained in any information or complaint for any offence against this act, either on the part of the prosecutor or the person accused, and shall refuse or neglect to appear at the time and place for that purpose appointed, without a reasonable excuse for his refusal or neglect, or appearing shall (after having been paid or tendered a reasonable sum for his costs, charges, and expences,) refuse to be examined upon oath and give evidence before such justice of the peace, then and in either of such cases such person shall forfeit for every such offence any sum not exceeding five pounds.

*Forfeitures, costs, and charges may be levied by distress and sale.—Application of penalties.*

CIII. And be it further enacted, that all penalties and forfeitures by this Act inflicted or authorized to be imposed for any offence against the same, and all balances due from a surveyor, and all costs and charges to be allowed and ordered by the authority of this act, (the manner of levying, recovering, and applying of which is not hereby otherwise particularly directed,) shall, upon proof and conviction of the offences respectively before any two or more justices, either by the confession of the party offending, or by the oath of any credible witness or witnesses, (which oath such justices are in every case hereby fully authorized to administer,) or upon order made as aforesaid, be levied, together with the costs attending the information, summons, and conviction, by distress and sale of the goods and chattels of the offender or person liable or ordered to pay the same respectively, by warrant under the hands of two or more justices before whom the party may have been convicted (which warrant such justices are hereby empowered and required to grant); and the overplus (if any), after such penalties, forfeitures, and fines, and the charges of such distress and sale, are deducted, shall be returned, upon demand, unto the owner or owners of such goods and chattels; and in

case such fines, penalties, and forfeitures shall not be forthwith paid upon conviction, then it shall be lawful for such justices as aforesaid to order the offender or offenders so convicted to be detained and kept in safe custody until return can be conveniently made to such warrant of distress, unless the offender or offenders shall give sufficient security, to the satisfaction of such justices as aforesaid, for his or their appearance before such justices on such day or days as shall be appointed for the return of such warrant of distress, such day not being later than seven days from the time of taking any such security, and which security the said justices as aforesaid are hereby empowered to take by way of recognizance or otherwise; or in case it shall appear to the satisfaction of such justices, either by the confession of the offender or otherwise, that he hath not goods or chattels within the jurisdiction of such justices sufficient whereon to levy all such penalties and forfeitures, costs and charges, such justices may at their discretion, without issuing any warrant of distress, commit the offender for such period of time, and in such and like manner, as if a warrant of distress had been issued, and nulla bona returned thereon; but if a warrant of distress shall be issued, and upon the return thereof it shall appear that no sufficient distress can be had, whereupon to levy the said penalty, forfeiture, or fine, and costs and expences aforesaid, and the same shall not be forthwith paid, or in case it shall appear to the satisfaction of such justices, upon the confession of the offender, or otherwise, that he hath not sufficient goods and chattels whereupon such penalty, forfeiture, or fine, costs, and expences, could be levied if a warrant of distress were issued, such justices shall not be required to issue such warrant, but in such case such justices are hereby required, by warrant under their hands, to cause such offender or offenders to be committed to the common gaol or house of correction of the county, riding, or place where the offender shall be or reside, there to be kept to hard labour, for any term not exceeding three calendar months, unless such penalties, forfeitures, and fines, and all reasonable charges attending the same, shall be sooner paid and satisfied; and the penalties and forfeitures, when so levied, shall be paid, the one half to the informer, and the other half to the surveyor of the parish where such offence, neglect, or default shall happen, to be applied towards the repair of the highways thereof, unless otherwise directed by this act; but in case the surveyor shall be the informer, then the whole shall be applied towards the repair of such highway.

*Satisfaction recoverable for special damage; but distress not to be deemed unlawful for want of form in the proceedings.—Plaintiff not to recover for irregularity if tender of amends be made.*

CIV. And be it further enacted, that where any distress shall be made for any sum of money to be levied by virtue of this act, the distress itself shall not be deemed unlawful, nor the party making the same be deemed a trespasser, on account of any default or want of form in any proceedings relating thereto, nor shall the party distraining be deemed a trespasser *ab initio* on account of any irregularity which shall be afterwards done in making the distress, but the person aggrieved by such irregularity may recover full satisfaction for the special damage in an action on the case: provided always, that no plaintiff shall recover in any action for any irregularity, trespass, or wrongful proceedings, if tender of sufficient amends shall be made by or on behalf of the party who shall have committed or caused to be

committed any such irregularity, trespass, or wrongful proceedings, before such action brought; and in case no such tender shall have been made, it shall and may be lawful for the defendant in any such action, by leave of the court where such action shall depend, at any time before issue joined, to pay into court such sum of money as he shall see fit, whereupon such proceedings or orders and judgment shall be had, made, and given in and by such court as in other actions where the defendant is allowed to pay money into court.

*Appeal may be made to quarter sessions against rate, &c.*

CV. Provided also, and be it further enacted, that if any person shall think himself aggrieved by any rate made under or in pursuance of this act, or by any order, conviction, judgment, or determination made, or by any matter or thing done, by any justice or other person in pursuance of this act, and for which no particular method of relief hath been already appointed, such person may appeal to the justices at the next general or quarter sessions of the peace to be held for the county, division, riding, or place wherein the cause of such complaint shall arise, such appellant first giving or causing to be given to the surveyor or surveyors, or to such justice or other person by whose act such person shall think himself aggrieved, notice in writing of his intention to bring such appeal, together with a statement in writing of the grounds of such appeal within fourteen days after such rate shall have been made, or cause of complaint shall have arisen, and within four days after such notice entering into a recognizance before some justice, with two sufficient sureties, conditioned to try such appeal at, and abide the order of, and pay such costs as shall be awarded by the justices at such general or quarter sessions; and such justices, upon hearing and finally determining the matter of such appeal, shall and may, according to their discretion, award such costs to the party appealing or appealed against as they shall think proper; and their determination in or concerning the premises shall be conclusive and binding on all parties to all intents and purposes whatsoever: provided nevertheless, that in case there shall not be time to give such notice and enter into such recognizance as aforesaid before the next sessions to be holden after the making of any rate or the cause of complaint shall have arisen, then and in every such case such appeal may be made to the next following sessions, and shall be then heard and determined: provided also, that it shall not be lawful for the appellant to be heard in support of such appeal, unless such notice and statement shall have been so given as aforesaid, nor on the hearing of such appeal to go into evidence of any other grounds of appeal than those set forth in such statement as aforesaid.

*Provisions of 41 G. 3. c. 23, applicable to this Act.*

CVI. And be it further enacted, that in all cases of appeal against the rate or assessment made in pursuance of this act, the several provisions and enactments contained in a certain act made and passed in the forty-first year of the reign of his late Majesty King George the Third, intituled *An Act for the better Collection of the Rates made for the Relief of the Poor*, shall be applicable thereto, as if the same had been repeated and re-enacted in this act with respect to such appeals.

*Rates and Proceedings, not to be quashed for want of form.*

CVII. Provided always, and be it further enacted, that no rate, nor any proceeding to be had touch-

ing the conviction of any offender against this act, or any order made, or any other matter or thing done or transacted in or relative to the execution of this act, shall be vacated or quashed for want of form, or be removed or removable (except as herein mentioned) by certiorari, or any other writ or process whatsoever, into any of his Majesty's courts of record at Westminster.

*In case of appeal, sessions may grant a special case.*

CVIII. And be it further enacted, that in any case of appeal the court of quarter sessions before whom the same is heard and determined may, if they think fit, state the facts specially for the determination of his Majesty's Court of King's Bench thereon, in which case it shall be lawful to remove the proceedings, by writ of certiorari or otherwise, into the said Court of King's Bench.

*Limitation of actions.—Defendant may plead the general issue.—Costs.*

CIX.—And be it further enacted, That no action\* or suit shall be commenced against any person for any thing done in pursuance of or under the authority of this act until twenty-one days notice has been given thereof in writing to the justice, surveyor, or person against whom such action is intended to be brought, nor after sufficient satisfaction or tender of satisfaction has been made to the party aggrieved, nor after three calendar months next after the fact committed for which such action or suit shall be so brought; and every such action shall be brought, laid, and tried where the cause of action shall have arisen, and not in any other county or place; and the defendant in such action or suit may plead the general issue, and give this act and every special matter in evidence at any trial which shall be had thereupon; and if the matter or thing shall appear to have been done under or by virtue of this act, or if it shall appear that such action or suit was brought before twenty-one days notice thereof given as aforesaid, or that sufficient satisfaction was made or tendered as aforesaid, or if any action or suit shall not be commenced within the time before limited, or shall be laid in any other county than as aforesaid, then the jury shall find a verdict for the defendant therein; and if a verdict shall be found for such defendant, or if the plaintiff in such action or suit shall become nonsuit, or suffer a discontinuance of such action, or if, upon any demurrer in such action, judgment shall be given for the defendant therein, then and in any of the cases aforesaid such defendant shall have costs as between attorney and client, and shall have such remedy for recovering the same as any defendant may have for his or her costs in any other case by law.

*Amount of fees.*

CX. And be it further enacted, That the several fees hereafter limited and expressed, and no others, shall be taken by the clerk of the peace, clerk to the justices, or others, for their several respective services in the execution of this act; (that is to say), the sum of sixpence for every information; the sum of one shilling for every summons or warrant, and sixpence for the service thereof; the sum of sixpence for every notice, and sixpence for the service thereof; the sum of one shilling for every order, and sixpence for the service thereof; the sum of two shillings for every warrant of distress; the

\* The limitation of action will be reckoned from the time of sustaining the injury, and not from the time of the act done. *Sutton v. Clark*, 6 Taunt. 29.

sum of one shilling for every appointment ; and the sum of two shillings for every conviction : Provided always, that in no place regulated by a local act of parliament, when the amount of the fees to be taken by the clerk to the justices, or others, in any proceeding for the recovery of any rate shall be less than the fees herein-before mentioned, shall it be lawful for such clerk to the justices or others to demand or take a greater fee for any similar proceeding under this act than the fee which may be mentioned or directed to be taken by such local act.

*Expenses for defending prosecutions agreed upon at a vestry meeting, how to be paid.*

CXI. And be it further enacted, That if the inhabitants of any parish shall agree at a vestry to defend any indictment found against any such parish, or to appeal against any order made by or proceeding of any justice of the peace in the execution of any powers given by this act, or to defend any appeal, it shall and may be lawful for the surveyor of such parish to charge in his account the reasonable expenses incurred in defending such prosecution, or prosecuting or defending such appeal, after the same shall have been agreed to by such inhabitants at a vestry or public meeting as aforesaid, and allowed by two justices of the peace within the division where such highway shall be ; which expenses, when so agreed to or allowed, shall be paid by such parish out of the fines, forfeitures, payments, and rates authorized to be collected and raised by virtue of this act : Provided nevertheless, that if the money so collected and raised is not sufficient to defray the expenses of repairing the highways in the said parish, as well as of defending such prosecution, or prosecuting or defending such appeal as aforesaid, the said surveyor is hereby authorized to make, collect, and levy an additional rate in the same manner as the rate by this act is authorized to be made for the repair of the highway.

*Limiting powers of 57 G. 3. c. 29.*

CXII. And be it further enacted, That nothing in this act contained shall be construed to abridge, repeal, alter, amend, or interfere with the powers and provisions contained in an act passed in the fifty-seventh year of the reign of King George the Third, intituled *An act for better paving, improving, and regulating the streets of the metropolis, and removing and preventing obstructions therein*, or the powers and provisions contained in any act relating to any particular parish or place for any of the purposes in this act mentioned.

*Not to extend to turnpike roads, or to roads under local acts.*

CXIII. Provided always, and be it further enacted, That nothing in this act contained shall apply to any turnpike roads, except where expressly mentioned, or to any roads, bridges, carriageways, cartways, horseways, bridleways, footways, causeways, churchways, or pavements, which now are or may hereafter be paved, repaired, or cleansed, broken up, or diverted, under or by virtue of the provisions of any local or personal act or acts of parliament.

*Not to affect the Universities ;*

CXIV. Provided always, and be it further enacted, That nothing in this act contained shall extend to alter or in any manner to affect any of the rights or privileges of the Universities of Oxford or Cambridge, or any of the powers vested by charter or

otherwise in the chancellors, masters, and scholars, and their successors, of the said Universities.

*nor the rights and liberties of the City of London ;*

CXV. Provided always, and be it further enacted, That nothing in this act contained shall extend to alter or in any manner affect the City of London and the liberties thereof, or the rights, interests, privileges, franchises, or authorities of the mayor and commonalty and citizens of the City of London, or their successors, or the lord mayor and aldermen of the said city, or the lord mayor of the said city for the time being as conservator of the river Thames or otherwise, or to prohibit, defeat, alter, or diminish any power, authority, or jurisdiction which at the time of making this act the said mayor and commonalty and citizens, the said lord mayor and aldermen of the said city, or the said lord mayor for the time being as conservator of the river Thames or otherwise, did or might lawfully claim, use, or exercise by any act of parliament or otherwise, or to vary or alter any of the provisions or regulations thereby made, directed, or provided, within the said City of London and the liberties thereof, anything herein contained to the contrary thereof in anywise notwithstanding.

*nor the act 1 G. 4. c. 7.*

CXVI. Provided always, and be it further enacted, That nothing in this act contained shall extend to alter or in any manner affect the provisions of an act passed in the first year of the reign of his late Majesty King George the Fourth, intituled *An act for regulating the repairs of bridges in the county of Montgomery*, so far as the same relates to the repairs of so much of the highways as lie next adjoining to any ends of any bridges within the said county of Montgomery, the repairs of which have already been made chargeable upon the rates of the said county under the provisions of the said recited act.

*Powers of commissioners of sewers not abridged.*

CXVII. Provided always, and be it further enacted, That nothing in this act contained shall extend to or be deemed or construed to extend to alter, affect, restrain, or abridge the powers or authorities given to the commissioners of sewers by any act of parliament whatsoever, or to vary or alter any of the provisions or regulations thereby made, directed, or provided, anything herein contained to the contrary thereof in anywise notwithstanding.

*Concerning the forms of proceedings.*

CXVIII. And be it further enacted, That the forms of proceedings relative to the several matters contained in this act, which are set forth and expressed in the schedule hereto annexed, shall be used upon all occasions, with such additions or variations only as may be necessary to adapt them to the particular exigencies of the case ; and that no objection shall be made or advantage taken for want of form in any such proceedings by any person whomsoever.

*Commencement of act.*

CXIX. And be it further enacted, That this act shall commence and take effect from and after the twentieth day of March one thousand eight hundred and thirty-six.

*Act may be altered this session.*

CXX. And be it further enacted, That this act may be altered, amended, or repealed in this present session of parliament.

of the highways, and that the said *A.B.* hath refused to permit the same to be dug, got, taken and carried away; and the said *A.B.* having been duly summoned to appear before us, to show cause why such permission should not be granted, and having appeared before us accordingly, [or having sent his steward or agent, or *C.D.*, on his behalf, to attend us on that occasion, or, but not having appeared,] we have heard what has been alleged, and taken the said matter into consideration, and are of opinion that the said materials are necessary, and ought to be dug, got, taken, and carried away for the purposes aforesaid: therefore we do hereby give our licence to the said surveyor [or surveyors] to dig, get, take, and carry away the same accordingly, the said surveyor making satisfaction for the same, and also for the damage done to such lands, in the manner directed by the said act. Given under our hands the day of one thousand eight hundred and

No. 20.

*Summons for any person or persons to attend a justice or justices.*

To A. B.

(to wit.) } Whereas complaint and information hath been made upon oath before me C. D. one of his Majesty's justices of the peace for the said [county, &c.] by E. F. of that, &c. [here state the nature and circumstances of the case, as far as it shall be necessary to show the offence and to bring it within the authority of the justice; and, in doing that, follow the words of the act as near as may be]: these are therefore to require you personally to appear before me [or the justices to be assembled at their petty sessions (or special sessions for the highways) to be holden at in the said county, &c.] on the day of next, at the hour of in the noon, to answer to the said complaint and information made by the said E. F., who is likewise directed to be then and there present to make good the same. Herein fail not.

Given under my hand this day of

No. 21.  
*Information.*

(to wit.) } Be it remembered, that on the day of A. B. of in the said county, in formeth and maketh oath before me one of his Majesty's justices of the peace for the said county, that of in the said county,

[here describe the offence, with the time and place, and follow the words of the act as near as may be, contrary to the statute in the fifth and sixth year of the reign of his Majesty King William the Fourth, intituled, "An act," &c. Here set out the title of the act,] which hath imposed a forfeiture for the said offence.

Taken and sworn the \_\_\_\_\_ day of \_\_\_\_\_ before me, \_\_\_\_\_ A. B.

## No. 22.

## Form of conviction.

(to wit.) } Be it remembered, that on the \_\_\_\_\_ day of \_\_\_\_\_ in the year of our Lord \_\_\_\_\_ at \_\_\_\_\_ in the county aforesaid, A. B. came before us \_\_\_\_\_ of his Majesty's justices of the peace for the said county, and informed us, that E. F. of \_\_\_\_\_ on the \_\_\_\_\_ day of \_\_\_\_\_ now last past, at \_\_\_\_\_ in the said county, did [set forth the fact in the manner described by the act], whereupon the said E. F. after being duly summoned to answer the said charge, appeared before us \_\_\_\_\_ on the \_\_\_\_\_ day of \_\_\_\_\_ in the said county, and, having heard the charge alleged against him, declared that he was not guilty of the said offence; but the same being fully proved upon the oath of G. H. a credible witness, it manifestly appears to us the said justices that he the said E. F. is guilty of the offence charged upon him in the said information: it is therefore considered and adjudged by us the said justices, that the said E. F. be convicted, and we do hereby convict him of the offence aforesaid; and we do hereby declare and adjudge that he the said E. F. hath forfeited the sum of \_\_\_\_\_ of lawful money of Great Britain, for the offence aforesaid, to be distributed as the law directs according to the form of the statute in that case made and provided. Given, &c.  
[This to be inserted when the party refuses to appear upon the summons.]

[After the words, "being duly summoned to answer the said charge," insert "did not appear before us pursuant to the said summons," or "did neglect and refuse to make any defence against the said charge;" but the same being fully proved, &c. as before.]

[This is to be inserted when the party accused confesses the charge.]

[After the words, "charge alleged against him," insert "acknowledged and voluntarily confessed the same to be true;" and it manifestly appears to us the said justices, &c. as above.]

## No. 23.

## Warrant to distrain for the forfeiture.

This to be varied according to the act in each particular case.

{ To the constable [Headborough or Tithing-man of \_\_\_\_\_

Whereas A. B. of \_\_\_\_\_ in the said county [Yeoman, &c.] is this day convicted before us, two of his Majesty's justices of the peace in and for the said county, upon the oath of G. H. a credible witness, for that the said A. B. hath [here set forth the offence, describing it particularly in the words of the act, as near as may be], contrary to the statute in that case made and provided; by reason whereof the said A. B. hath forfeited the sum of \_\_\_\_\_ to be distributed as herein is mentioned, which he hath refused to pay: these are therefore in his Majesty's name to command you to levy the said sum of \_\_\_\_\_ by distress of the goods and chattels of him the said A. B.; and if within the space of four days next after such distress by you taken, the said sum of \_\_\_\_\_ together

with the reasonable charges of taking and keeping the same, shall not be paid, that when you do sell the said goods and chattels so by you distrained, and out of the money arising by such sale that you do pay one half of the said sum of \_\_\_\_\_ to E. F. of \_\_\_\_\_ who informed me of the offence, and the other half of the said sum of \_\_\_\_\_ to I. K. the surveyor of the parish [township or place] where the said offence [neglect or default] happened, to be employed towards the repair of the said highways, returning the overplus, upon demand, to him the said A. B., the reasonable charges of taking, keeping, and selling the said distress being first deducted; and if sufficient distress cannot be found of the goods and chattels of the said A. B. whereon to levy the said sum of \_\_\_\_\_ that then you certify the same to us, together with this warrant.

Given under our hands the \_\_\_\_\_ day of \_\_\_\_\_ C. D.  
E. F.

## No. 24.

Return of the constable to be made upon the warrant of distress when there are no effects.

I A. B., constable of the [parish, &c.] of \_\_\_\_\_ in the county of \_\_\_\_\_ do hereby certify and make oath, that by virtue of this warrant I have made diligent search for the goods of the within-named \_\_\_\_\_ and that I can find no sufficient goods whereon to levy the within sum of \_\_\_\_\_

As witness my hand the \_\_\_\_\_ day of \_\_\_\_\_ A. B.

Sworn before me the day and year &c. C. D.

## No. 25.

## Commitment for want of distress.

(to wit) { To the [constable] of \_\_\_\_\_ in the said county, and to the keeper of the common gaol [or house of correction] at \_\_\_\_\_ in the said county.

Whereas A. B. of \_\_\_\_\_ in the said county, Yeoman, was on the \_\_\_\_\_ day of \_\_\_\_\_ convicted before us, two of his Majesty's justices of the peace in and for the said county, upon the oath of E. F. a credible witness, for that he the said A. B. [here set forth the offence], contrary to the statute made in the fifth and sixth year of the reign of king William the fourth, intituled "an act," &c. [here set out title of act,] by reason whereof the said A. B. hath forfeited the sum of \_\_\_\_\_ : And whereas on the \_\_\_\_\_ day of \_\_\_\_\_ in the year aforesaid we did issue our warrant to the [constable] of \_\_\_\_\_ to levy the said sum of \_\_\_\_\_ by distress and sale of the goods and chattels of him the said A. B., and to distribute the same according to the directions of the said statute: and whereas it duly appears to us upon the oath of the said [constable] that the said [constable] hath used his best endeavours to levy the said sum on the goods and chattels of the said A. B., as aforesaid, but that no sufficient distress can be had whereon to levy the same: these are therefore to command you the said [constable] of \_\_\_\_\_ aforesaid to apprehend the said A. B., and him safely convey to the common gaol [or house of correction] at \_\_\_\_\_ in the said county, and there deliver him to the keeper thereof, together with this precept: and we do hereby also command you the said keeper to receive and keep in your custody, and to keep to hard labour, the said A. B. for the space of \_\_\_\_\_ unless the said sum shall be sooner paid, pursuant to the said conviction and warrant; and for so doing this shall be your sufficient warrant.

Given under our hands the \_\_\_\_\_ day of \_\_\_\_\_ in the year of our Lord \_\_\_\_\_ C. D.  
E. F.

# INDEX TO THE ACT.

(Reference is made to the Sections of the Act, except where the Page is specifically mentioned.)

**ACCOUNTS**, separate and distinct, to be kept, 39  
 Book of account to be kept of all money which shall be received, and how applied, 40  
 To be open to the inspection of of every rated inhabitant, under a penalty of not exceeding 5*l.*, 40  
 Form of weekly account, page 420  
 Accounts made up and balanced, to be annually laid before the inhabitants in vestry, 41  
 Also before the justices at special sessions, who may examine the surveyor as to the truth thereof, 44  
 Justices may hear and determine complaints against accounts, 44  
**ACTIONS** on the case may be brought by persons aggrieved for irregularity in making distress, and satisfaction recovered, but not if tender of amends be made, 104  
 No action for any offence done in pursuance of this act to be commenced without notice, 109  
 Nor after satisfaction or tender of amends, 109  
 And must be brought within three months after the fact committed, and within the county where the cause of action shall have arisen, 109  
 Defendant may plead the general issue, and give this act in evidence, 109  
 Costs to be awarded according to the verdict, 109  
**ACT** to commence from 20th March, 1836, 119  
 Construction of, 5  
 Extent of, 5  
 Not to abridge the powers of the Metropolitan Paving Act, 112  
 Or of any act relating to any particular parish for any of the purposes in this act mentioned, 112  
 Nor to extend to turnpike roads, unless expressly mentioned, 113  
 Or to any roads, &c. repaired under local acts, 113  
 Or to abridge the rights of the Universities, 114  
 Or the liberties of the City of London, 115  
 Or to alter the Montgomery County Bridge Act, 116  
 Or the powers of the commissioners of sewers, 117  
**ANNOYANCES**.—Persons playing at football or other game on the highway to the annoyance of the passengers, or laying timber, manure, ashes, &c. upon or on the sides of highways to the injury thereof, or to the injury, interruption, or danger of passengers, to forfeit not exceeding 40*s.*, and damages, 72  
 Any person wilfully preventing others from passing, or interrupting the free passage, or not keeping his horses, &c. on the near side of the road, &c. to forfeit not exceeding 5*l.* if the driver, and 10*l.* if the owner of any carriage, &c. in addition to any civil action to which he may be liable, 78.  
**ANNUAL STATEMENT** in writing to be made by the surveyor, of all roads, common highways, hedges, nuisances, &c., extent and expense of repair, and amount levied, 41  
 Form of annual return, page 430

**APPEAL**.—Persons aggrieved by rate, order, conviction, &c. for which no particular method of relief is given, may appeal to the next quarter sessions, 105  
 Notice and statement of the ground of appeal to be given within fourteen days after the cause of complaint arose, 105  
 And recognizance to be entered into within four days after notice, for trying the appeal and paying costs, 105  
 Justices on hearing appeal may award costs, 105  
 Determination of sessions final, 105  
 If not sufficient time to give notice, &c. appeal may be made to the next following sessions, 105  
 Appeal not to be heard without proof of the notice, and no evidence to be gone into other than that set forth in the statement, 105  
 In case of appeal, sessions may grant a special case, and the proceedings may then be removed into the King's Bench, 105  
**APPORTIONMENT** of repairs between different parishes, 58  
 Apportionment of fine upon indictment of non-repair of turnpike road, between the trustees and the inhabitants, 54  
**ASSISTANT-SURVEYOR**.—Board of directors may appoint, with a salary, 18  
**BANKS**.—Surveyor to remove impediments by the falling of banks, &c., 26.  
**BOARD OF DIRECTORS**.—Any parish having 5,000 inhabitants may determine by a majority of two-thirds of vestry to form a board for the superintendence of the highways, 18  
 Such vestry to elect not exceeding 20 nor less than 5 eligible householders to serve as surveyors, 18  
 Such surveyors or three of them, to act as a board to carry the act into effect, 18  
 Powers of surveyors vested in the board, 18  
 May appoint collectors and employ assistant-surveyor and clerk, 18  
 May appoint treasurer and take security from him, 18  
 May rent, or, with the consent of the vestry, purchase, premises for implements and materials, 19  
 To determine as to paving or curbing with stone or otherwise, 19  
 All monies paid to the treasurer to be paid by drafts or checks of the board entered by the clerk, 18  
 To present to the vestry copies of their accounts and minutes of their proceedings, 18  
**BOOKS**.—The property of books, &c. vested in surveyor, 41  
**BOUNDARY STONES** to be put up by surveyor, with the consent of the vestry, or by order of special session, 24  
**BOUNDARIES**.—Provisions for ascertaining boundaries between parishes, 58  
**BRICK KILNS**.—No fire for burning bricks or clay to be made within fifteen yards from any carriage-way, unless screened by a building or wall, under a forfeiture of not exceeding 5*l.* per day during its continuance, 70  
 Not to restrain the repairing, re-

building, or enlarging of any existing erection, 70  
 Highways at the end of bridges hereafter to be built, to be repaired as other highways, 21  
 Not to extend to raised causeways, &c., 21  
 Powers for getting materials and preventing nuisances extended to county bridges and roads at the ends thereof, 22  
**BULL-BAITING**.—Persons baiting bulls upon or near any road, to the annoyance of passengers, to forfeit 40*s.*, and damages, 72  
**CARRIAGES, CARTS, &c.**—The owner's christian name and place of abode to be painted on carriages, under a penalty of not exceeding 40*s.* for neglect, or for painting a fictitious name, &c., 76  
**CARTWAYS** to be made twenty feet wide at least, 80  
**CATTLE**.—Persons leading or driving cattle on a footpath, or tethering them on a highway, to forfeit not exceeding 40*s.*, and damages, 72  
 Cattle found on any highway without a keeper may be impounded, 74  
**CAUSEWAYS** may be secured by posts, blocks of stone, or banks of earth, 24  
**CENTRE OF HIGHWAYS**.—The ground repaired with road materials for six months preceding shall be deemed to be the highway, 63  
 The centre shall be the middle of such highway so maintained for twelve months before, 63  
**CERTIFICATE** of a highway having been substantially made, page 430  
 Certificate of an offer having been made to purchase lands, page 432  
**CLERK**.—Board of directors may appoint clerk with salary, 18  
**CERTIORARI**.—Where proceedings not to be removed by certiorari, 108  
**CHURCH**.—How this word is to be interpreted throughout the act, 5  
**COKE**s.—No fire for the making cokes to be made within fifteen yards from any carriage-way, unless screened by building or wall, under a forfeiture of not exceeding 5*l.* per day during its continuance, 70  
 Not to restrain the repairing, rebuilding, or enlarging of any existing erection, 70  
**COLLECTOR OF RATES**.—Board of directors may appoint collector, with salary, 18  
 Surveyor, with the consent of the inhabitants in vestry, may appoint collectors of rates and remove them, and to make such allowance to them as the inhabitants shall think reasonable, 35  
 To have the same powers for levying rates as the surveyor, 35  
 To deliver to the surveyor accounts of receipts and arrears, and pay over the balance, 38  
 To give security to the surveyor for the due execution of his office by bond, without stamp, 37  
 On neglect to render account and deliver up books, &c., may be summoned before a justice, who may issue a warrant of distress, 38  
 If the distress be insufficient, the offender may be imprisoned six

calendar months, or until payment or composition, 38

On refusal or wilful neglect to deliver or give satisfaction, to forfeit not exceeding 20*l.*, and in default to be committed to prison not exceeding four months, 38

No such conviction or imprisonment to discharge any security given on his appointment, 38

**COMMITMENT.**—General form of commitment, page 433

**COMPOSITION.**—Surveyor to have power to enforce composition for rates, in parishes where the overseers have such power by local acts, 30

**CONSENT** of the owner of lands through which a road is proposed to be made, page 432

**CONTRACTS.**—Surveyor, with the consent of the inhabitants in vestry, may contract for purchasing, getting, and carrying materials, 46

Surveyors not to be concerned in contracts, or to sell materials, or let to hire teams, &c., on penalty of not exceeding 10*l.*, and being incapable of being a surveyor with a salary, 46

Contracts for land for the use of roads, made by corporations, tenants for life, &c., to be binding, 48

**CORPORATIONS** may renounce damages for land and materials, 49

**COUNTIES** not to be liable to repair the highway approaching to and over bridges hereafter to be built, 21

**DAMAGING HIGHWAYS, &c.**—Any person injuring or damaging any highways, or the hedges, posts, rails, walls or fences thereof, &c. to forfeit not exceeding 40*s.* and damages, 72

**DAMAGING OR ENDANGERING PROPERTY, 57**

**DEDICATION OF HIGHWAYS.**—No private road to be hereafter repaired by the parish without three months' previous notice, 28

Form of notice, page 430

And the road to be made of a proper width, and to the satisfaction of the surveyor and two justices, 23

Certificate of the road being satisfactorily made to be enrolled at the quarter sessions, 23

Form of certificate, page 430

After the highway shall have been used by the public and repaired by the maker twelve months to be kept in repair by the parish, 23

On receipt of notice surveyor to call a vestry meeting, 23

If not deemed of sufficient utility, justices may summons the party to the special sessions, where the matter shall be determined, 23

Any body politic or person liable to the repair of a highway, *ratione tenuræ*, &c., or the surveyor, may apply to a justice to make it a parish highway, 62

Justice to summons the parties, and proceed to determine the matter, 62

If further time is required, justice may adjourn to the next special sessions, 62

If justices decide that the highway shall become a parish highway, they shall fix the proportions of repair to be borne by each party, which shall be binding, 62

Or they may fix a certain sum to be paid in discharge of all repairs, 62

If such sum shall exceed 100*l.*, to be vested in government securities, and the interest applied towards the repair of the highways, 62

On application for widening, divert-

ing, &c. a highway, *ratione tenuræ*, the justices at special sessions may order it to be placed under the control of the surveyor of the parish, 93

The justices at special sessions may fix an annual or other sum to be paid by the persons previously bound to repair, 93

**DIRECTION POSTS.**—Direction posts to be put up by surveyor with the consent of the vestry, or by order of special sessions, 24

Wilfully destroying posts fixed by surveyor to forfeit not exceeding 40*s.* and damages, 72

**DISTRICT SURVEYOR.**—Inhabitants in vestry may make application to justices at quarter sessions to form parishes into a district, and nominate district surveyor, 13

On such application justices to unite parishes, and select district surveyor, 14

The union to be notified to the different parishes and continue for three years, and until any one parish gives twelve months' notice of intention to cease to form one of the districts, 15

District surveyor to have the same powers as surveyor, except in levying rate, 16

Not to expend monies levied in one parish for the benefit of another without consent, 16

**DISTRESS.**—Distress warrant may be issued by one or more justices, for expenses of removing encroachments, 73

Also for rates, 34

Also for a collector refusing to account, 38

Also for penalties, 103

Form of warrant, page 433

Also for costs of proceedings for penalties, 97

Party aggrieved by irregularity of distress, may recover satisfaction for special damages, 104

**DITCHES, DRAINS, &c.**—The surveyor to make, scour, cleanse, and keep open all ditches, gutters, drains, or watercourses, 67

Also to make and lay such trunks, tunnels, plats, or bridges, as he shall deem necessary, in adjacent lands, on paying for damages, 67

If owner, &c., alter such ditches without consent, he shall reimburse the expenses, and forfeit not exceeding three times the amount, 66

**DIVERTING HIGHWAYS.**—Where the inhabitants in vestry deem it expedient that any highway should be stopped up, diverted, or turned, the chairman shall direct the surveyor to apply to two justices to view the same, and authorise payment of the expenses, 84

Any other party may give notice, requiring the surveyor to call a meeting for that purpose, 84

Two justices, on view, may direct the surveyor to give notice for diverting, &c. any highway, 85

Notice to be inserted in the newspaper, and affixed on the church door, 85

On proof of notice and plan, justices to grant a certificate of having viewed the highway, 85

Certificate and plan to be deposited with the clerk of the peace, 85

Certificate may be inspected, 85

More than one highway, if connected together, may be included in the same order or certificate, 86

The order or certificate may be confirmed wholly or in part, 87

Any person thinking himself aggrieved may appeal to the next quarter sessions, on giving ten days' notice, 88

On hearing the appeal, the grounds set forth in the notice only to be questioned, 88

In case of appeal, jury at sessions to determine whether the highway is nearer, &c., 89

Costs to be awarded, 90

If no appeal be made, or if it be dismissed, sessions to make order for diverting, &c., and the old way shall be stopped, 91

New highway shall afterwards continue a public highway, 91

Party liable to repair old highway, to repair new highway, 92

These provisions to extend to highways repaired *ratione tenuræ*, &c., 93

Justices to fix the annual or other amount payable by party previously bound to repair, 93

**DIVIDING ROADS.**—Power to divide roads situate in two parishes, 58

**DIVISION.**—How this word is to be interpreted throughout the act, 5

**DRIVERS.**—Any driver riding upon his carriage without some person to guide the horses (except carts, &c., with reins), or quitting the road and leaving his carriage, or wilfully damaging any other carriage, and not keeping to the left thereof, or driving carriage, &c., without name and residence thereon, or refusing to discover his name, or preventing other carriages from passing, or interrupting the passage, or furiously driving or otherwise misbehaving, to forfeit not exceeding 5*l.*, and if the owner as well as the driver, not exceeding 10*l.*, 78

In default of payment of such penalty may be committed to the house of correction for six weeks, 78

May be apprehended without warrant, and refusing to discover his name, may be committed for three months, or proceeded against for the penalty without expressing his name, 78

One driver may take charge of two carts, but unless the reins are properly attached, to forfeit not exceeding 20*s.*, 77

**ENCROACHMENTS, &c.**—Any person encroaching by making a building, hedge, ditch, or fence, on any carriage-way or cart-way, or within fifteen feet from its centre, to forfeit not exceeding 40*s.*, 69

The surveyor may remove the encroachment at the expense of the owner, 69

The justices at special session may levy the expenses as a penalty, 69

**EXPENSES.**—Any person summoned and convicted before a justice may be ordered to pay costs and expenses, 97

But if the information be withdrawn, quashed, or dismissed, the informant may be ordered to pay costs, 97

On default of payment the same may be levied by distress and sale, 97

If no distress be found, the party may be committed to prison and kept to hard labour not exceeding one calendar month, 97

If the inhabitants agree to defend any indictment, or to appeal, or defend any appeal, the surveyor may charge the expenses in his accounts after being agreed to at a vestry, and allowed by two justices, 111

Such expenses to be paid out of the rates, &c., raised under this act, 111

Costs of proceeding to obtain land

for widening roads by whom to be payable, 82

Expenses of proceeding for diverting highways, &c. by whom to be paid, 84, 89

#### EXPLANATION OF TERMS, 5

**FEES.**—Amount of fees to be taken by the clerk of the peace, clerk to the justices and others, 110

Provided they are not more than limited by any local act, 111

**FEOFFES' LANDS.**—Feoffees of land given for the maintenance of highways, to let the same at the most improved yearly value, 50

**FIRES.**—Persons making fires within 50 feet of the centre of any carriage-way to forfeit not exceeding 40s. and damages, 72

**FIREWORKS.**—Persons wantonly letting off fireworks within 50 feet of the centre of the road, to forfeit 40s. and damages, 72

**FOOTPATHS.**—Footpaths to be made 3 feet wide if the ground between the hedges will admit thereof, 80  
But surveyor not to be required to make footpaths without the consent of vestry, 80

Persons riding on footpaths, or leading or driving cattle or carriages, &c. thereon, or injuring or obstructing the same, to forfeit not exceeding 40s. and damages, 72

**FORMS.**—The forms of proceedings in the schedule to be used, and no objection to be taken for want of form, 118

Proceedings not to be quashed or vacated for want of form, 107

Schedule of forms referred to in the act, page 429

**FURIOUSLY RIDING OR DRIVING.**—Any person furiously riding or driving so as to endanger the life or limb of any passenger, to forfeit 5l. if the driver, and 10l. if the owner, 78

**GATES.**—Every gate across a cartway to be 10 feet wide, and across a horseway 5 feet wide, or the owner, after notice, to forfeit not exceeding 10s. for every day's neglect, 81

**GAMES.**—Persons playing at football or other games on any part of the highway to the annoyance of passengers, to forfeit not exceeding 40s. and damages, 72

**GARDENS.**—Materials for repairing roads, not to be taken from or carried through gardens, &c. 54

Gardens not to be taken for widening roads, 82

**GIPSIES, HAWKERS, &c.**—Hawkers, higgles, gipsies, &c. encamping upon any highway to forfeit not exceeding 40s. and damages, 72

**GRADUATED STONES.**—Surveyor may cause graduated stones to be erected on ways subject to floods, 24

**HIGHWAYS.**—How this word is to be interpreted throughout the act, 5  
How a highway may originate, 23, 62, 91

Width of, 80

Widening, 82

Diverting, &c. 84

**HIGHWAY ALL TMENTS.**—Land allotted to the parish for materials, when exhausted, may be sold, and others purchased in lieu thereof, 48

Lands given for the maintenance of highways, to be let at the most improved yearly value, 50

Previous to granting such lease, the consent of the justices (not being interested), to be obtained, 50

**HORSEWAY.**—Every public horseway to be maintained 8 feet wide, 80

**IMPEDIMENTS** occasioned by snow or the falling of banks, &c., to be removed, 26

Heaps of stone not to remain on the roads at night, 56

**IMPOUNDING CATTLE.**—Cattle found on or about any road without a keeper (except where it leads over common or waste ground), may be impounded by surveyor or other person) and be detained till the owner pays 1s. a head, and expenses, 74

If penalty and expenses be not paid within five days after notice, justices may order them to be sold, unless it be made to appear that they have escaped without the owner's consent, 74

But no higher sum to be paid than 20s. and expenses, for any number of cattle, 74

And not to take away any existing right of pasturage on the sides of the highways, 74

Persons guilty of releasing impounded cattle, to be committed to prison, on the warrant of one justice, for not exceeding three calendar months, 75

**INDICTMENT.**—Where the duty or obligation of repairing any highway comes in question, the justices may direct an indictment to be preferred and witnesses to be subpoenaed, 95

The costs to be directed by the judge of assize, and levied in the parish, 95

If preferred at the quarter sessions, it may be removed into K. B. 95

Fines, &c. on indictment to be applied as the court may direct, 95

Penalty on misapplying any such fine double the sum received, 96

If any fine be levied on any inhabitant, the special sessions may order the surveyor to pay the same, 96

The court may award costs to the prosecutor, if the indictment be frivolous or vexatious, 98

**INFORMATION.**—Information for penalties not necessary to be in writing, 101

General form of, page 40

Information to obtain the apportionment of a highway, page 431

**INHABITANTS.**—How this word is to be interpreted throughout the act, 5

**INTERPRETATION CLAUSE, 5.**

**IRONSTONE.**—No fire for calcining or burning ironstone, to be made within fifteen yards from any carriage-way, unless screened by a building or wall, under a forfeiture of not exceeding 5l. per day during its continuance, 70

Not to restrain the repairing, rebuilding, or enlarging of any existing erection, 70

**JUSTICES.**—How this word is to be interpreted throughout the act, 5

**LICENSE.**—Forms of licenses to obtain materials out of inclosed lands, page 430

**LIMITATION OF ACTION, 109**

**MATERIALS.**—Surveyor, with the consent of vestry, may contract for purchasing, getting, and carrying materials, 46

Inhabitants may divide the carrying among themselves, if agreed to at a parish meeting, 35

Materials may be obtained in common land within the parish, or (if sufficient cannot be found there) in any other parish, so as not to prejudice buildings, &c.; and stones may also be gathered in any parish, without satisfaction, 51

But not to be taken from inclosed land without the owner and occupier being first summoned to appear at the sessions, 51

Magistrate's authority to take materials in the parish, page 430

Similar authority for taking them in another parish, page 431

Satisfaction to be made for damages, by getting and carrying materials, 51

Sea-beach not to be removed so as to cause inundation, &c. 52

Pits and holes made by obtaining materials, to be filled up, &c. 55

Mills, dams, buildings, &c., not to be undermined or damaged, 57

Land allotted to the parish for materials, when exhausted, may be sold, 48

Materials, tools, implements, and scrapings to be vested in the surveyor, or district surveyor, 41

Materials not to be taken away within six weeks after working, except by the owner for private use, under a penalty of not exceeding 10l. 47

Powers for getting materials extended to county bridges, and roads at the ends thereof, 22

Tenants for life, corporations, &c., may renounce damages for land, and materials occupied by the highway on their property, 49

**MILE-STONES.**—Mile-stones to be put up by surveyor, with the consent of the vestry, or by order of special sessions, 24

Any person pulling down or defacing them, to forfeit not exceeding 40s. and damages, 72

**NOTICE.**—Notice to a person on being appointed a surveyor, page 429

Notice of intention to make highway, page 430

Notice to surveyors to remove impediments, page 430

Notice to remove nuisances, page 432

Notice of diverting, &c. a highway, page 432

**NUISANCES.**—Steam-engines, mills, &c. not to be erected near the road, without being concealed, 70

Railways, crossing the road, to be provided with gates and keepers, 71

Persons riding or driving on footpaths, making fires, letting off fireworks, baiting bulls, or suffering offensive matter to run on the highway, &c. to forfeit not exceeding 40s. and damages, 72

Timber, manure, &c. laid on or near highways, so as to be a nuisance, to be removed on notice, 72

Or on failure, the surveyor may remove and dispose of the same, by order of a justice, 73

**OBSTRUCTIONS.**—Any person willfully obstructing any footway, or laying any timber, stone, hay, straw, dung, manure, lime, soil, ashes, rubbish, &c., upon any highway, to the injury thereof, or of passengers, or suffering any offensive matter to run or flow into any highway from any house, &c. or obstructing the free passage of any highway, to forfeit not exceeding 40s. and damages, 72

Anything laid upon a highway so as to be a nuisance, which shall not be renewed after notice, may be removed and disposed of for the benefit of the highway, 73

**OFFENDERS.**—Unknown offenders may be seized by surveyor, &c. and conveyed before a justice, 79

**ORDER** apportioning repairs between different parishes, page 431

Order for widening a highway, page 432

**OWNER.**—How this word is to be interpreted throughout the act, 5

**PARISH.**—How this word is to be interpreted throughout the act, 5

Provision for dividing repair of highways situate in two parishes, 58

Parishes may be formed into districts, for the purpose of appointing a district surveyor, 14

**PAVING ACTS**, powers of, not to be abridged by this act, 112

**PAVING HIGHWAYS**.—Board of directors (if any) to decide whether highways shall be paved or curbed with stone or otherwise, 19

**PENALTIES**.—Justice may proceed by summons for recovery of penalties, without information in writing, 101

Penalties (if not otherwise directed) shall upon proof and conviction by confession, or proof by one witness, be levied with costs by justice's warrant of distress and sale, 103

And if not paid upon conviction, offender may be detained, 103

But if no distress found, justice may commit the offender to gaol or house of correction, for not longer than three months, 103

Witnesses may be compelled to attend to give evidence, 102

Justices may award costs, 97

As to irregularity in distraining, 104

Action to be brought (after twenty-one days' notice) within three calendar months after offence committed, 109

Proceedings touching any conviction not to be quashed for want of form, nor removed by certiorari, 105

One moiety of the money arising from penalties not otherwise directed, to be paid to the informer, and the other to the surveyor for the repair of the highway, 103

**PETTY SESSIONS**.—How this word is to be interpreted throughout the act, 5

**POOR RATE**.—Surveyor or person authorized by him may inspect poor-rate without fee or reward, and make copies or extracts, 28

Highway rate to be made and levied on persons and property subject to poor rate, 27

Remedies for recovering poor-rate extended to highway rate, 34

**POOR PERSONS**.—Justices in special sessions may excuse poor persons from payment of highway rates, 32

**PRESENTMENT**.—Proceedings by presentment abolished, 99

**PROCEEDINGS TO COMPEL REPAIR**.—If any highway is out of repair, on information any justice may summon the surveyor, &c., to special sessions, 94

The justices may appoint a person to view the same or fix a day to attend themselves, 94

If it shall appear that the highway is not in a state of thorough repair, they may convict the surveyor, &c., in not exceeding 5*l.*, and limit a time for the repairs to be done, 94

If not done within the time limited they may order a sum to be paid to some person, to be applied in repairing the highway, 94

If the highway be part of a turnpike road, the justices to summon the surveyor or treasurer thereof, 94

But the justices not to make such order where the obligation of repairing comes in question, 94

Proceedings by presentment abolished, 99

**RAILROADS**.—Where a railroad crosses a highway, the proprietors to make sufficient gates and appoint proper persons to open and shut them, 71

On complaint for neglect to be made within ten days, one justice may summon the party to special sessions, and the proprietor offending to forfeit not exceeding 5*l.*, 71

**RATE**.—In order to raise money for

carrying the purposes of this act into execution, the surveyor to make rate, 27

To enable him to form a proper judgment of any rate, the surveyor to have the power to inspect and copy poor rates without fee, 28

Errors or omissions in rate may be rectified by the surveyor with the consent of a justice, 31

Justices or quarter sessions may direct additional rate in respect of land taken for widening the highway, 82

Surveyor may make an additional rate for expenses of indictments, appeals, &c., if necessary, 111

To contain the name of the occupier, description of the premises, value and sum per pound, 29

Form of rate, page 429

But not to be vacated or quashed for want of form, nor removed by certiorari, 107

Rate to be made and levied upon all property liable to the relief of the poor, 27

And upon such woods, mines, &c., as have been usually rated to the highways, 27

Rate not to exceed at one time 10*d* in the pound, or 2*s* 6*d* per year, 29

But four-fifths of inhabitants at a meeting may increase it to such sum as they think proper, 29

Additional rate for widening highways not to exceed one-third of the rate hereby authorized, 82

Rate to be allowed and published the same as poor rates, 27

When property, or the owner or occupier in respect of it, had been legally exempted from statute duty, composition, or highway rate, he or it shall continue exempt from the rate hereby authorized, 33

Persons may be excused from the rate on account of their inability to pay it through poverty, 32

Persons aggrieved by rate may appeal to the next quarter sessions, 105

In case of appeal, the regulations of 41 G. 3, c. 23, s. 1, extended to highway rates, 106

Surveyor to collect and levy the rate, 27

And to have the same powers, remedies, &c., as overseers have for the recovery of poor rate, 34

Distress not illegal for want of form, 101

**REPAIRING HIGHWAYS**.—Materials for, 51

Workmanship for, 35

Proceedings to compel repair, 94

**REPEAL**.—Acts and parts of acts repealed, 1

Not to revive repealed acts, 2

**RETURN**.—Return to warrant of *nulla bona*, page 433

**ROAD PROPERTY**.—All books, papers, and accounts, and all materials, tools, and implements provided for the highways, to be vested in the surveyor, 41

To be delivered over to new surveyor on his appointment, 42

Land allotted for materials, &c., when exhausted may be sold, 48

Property left in trust for the roads to be let at the most improved yearly value, 50

**SECURITY**.—Treasurer appointed by the board of directors to give security, 18

Rate collector to give security for the due execution of his office, 37

Proceedings against rate collector not to discharge any security given on his appointment, 38

**SNOW**.—Surveyor to remove snow causing impediment on highway, 26

**SPECIAL SESSIONS**.—The justices of the peace are to hold not less than eight nor more than twelve sessions for the highways in every year, 45

The days to be fixed within fourteen days after the 20th of March, 45

Notice of holding sessions not necessary to be given, 45

Surveyor to verify his account, and make a return of the state of the roads, &c., at the special sessions next after the 25th day of March, 45

**STAMP**.—Surveyor's appointment to be without stamp, 9

Collector's bond to be without stamp, 37

**STEAM ENGINES**.—No pit or shaft to be sunk, or steam engine or machinery to be erected, within twenty-five yards of any carriage way without being enclosed and concealed from the road, under a forfeiture of not exceeding 5*l.* per day during its continuance, 70

Not to restrain the repairing, rebuilding, or enlarging of any existing engine, &c., 70

**SUMMONS**.—General form of summons to attend a justice, page 432

Summons to obtain the appointment of a highway, page 431

**SURVEYOR**.—How this word is to be interpreted throughout the act, 5

Present surveyor to continue until a new one be appointed, 4

As to surveyors appointed under 13 G. 3, c. 78, 44

Inhabitants at meeting for the nomination of overseers, to elect surveyor, 6

Surveyor may be re-elected, 6

If no meeting for the nomination of overseers, inhabitants to meet on the 25th day of March, or within fourteen days afterwards, 6

Surveyor may appoint a deputy to be approved of by the justices, 7

Deputy to have the same power as surveyor, 8

Inhabitants may elect surveyor with a salary, 9

Form of appointment, page 429

Justices to appoint surveyor in case the inhabitants neglect, 11

Or in case the surveyor is dead, or becomes disqualified, or neglects to act, 11

Form of appointment, page 429

When a parish failing to elect, &c., is situate in more than one county, justices to appoint surveyor, 11

Persons having an estate of 10*l.* a year, or a personal estate of 100*l.* or being a tenant to the amount of 20*l.* a year, eligible to be elected, 7

No person now exempt by law to be compellable to serve, 7

To repair and keep in repair the several highways liable to be repaired by the parish, 6

To make, support, and maintain every public cartway leading to a market town, twenty feet wide at the least, 80

And every public footway at the side of any cartway, three feet, if the ground will admit, 80

May use certain adjoining lands as a temporary road, when highway is out of repair, 25

To make, assess, and levy a rate, to be signed by himself, and allowed by two justices, 27

For that purpose may inspect poor rate and may make copies, 28

To have power to enforce composition where the overseers have such power by local acts, 30

May correct errors in rates with the approbation of justices, 31

To have the same power of recovering rates as the overseers of the poor, 34

May appoint collector of rates with

the consent of the vestry, taking security from him for the due execution of his office, 36

Where a district surveyor is appointed, surveyor only to make and levy the rate, and pay over assessment, 16

To keep distinct and separate accounts of monies levied for rates, 39

To keep accounts of all monies received, and how applied, to be open to the inspection of the inhabitants, 40

To lay his accounts annually before the inhabitants in vestry, 44

Also to verify them before the justices at special sessions, 44

To deliver to the justices a statement or report of the state of all the roads, amount of expenditure, &c., 45

Also to deliver in the name of his successor, 10

Form of statement, page 430

To deliver up books, tools, &c. and pay over the money due, to his successor, 42

To charge in his accounts the expenses of indictments and appeals agreed to at a vestry and allowed in special sessions, 111

If the money collected be insufficient to levy an additional rate, 111

May direct how team work is to be performed (spring, seed-time, and harvest excepted), 35

With the consent of inhabitants, may contract for purchasing, getting and carrying materials, 46

May obtain materials in any waste land or common ground, 51

By license from the justices, and after notice, may get materials in inclosed lands within the parish, 54

Or within any parish adjoining, if they cannot be conveniently had elsewhere, 54

To fill up, slope down, or fence, off pits or holes made by getting materials, 55

With the consent of vestry may sell lands, where the materials are exhausted, 48

To remove impediments occasioned by snow, or the falling of banks, on notice from justices, 26

Not to allow any heap of stones to remain on the highway at night, without due precaution, 56

If he shall think any carriageway prejudiced by hedges or trees, the special sessions on summons may determine the matter, 65

May remove such obstruction, (if the order of the justices is not complied with), and be reimbursed his expenses, and the justices at special sessions may levy the expenses and penalties, 65

Not to cut hedges and trees between certain times specified, 66

To cause encroachments to be removed after notice and default of the owner, 69

By order of a justice, may remove nuisances, and dispose of the same for the benefit of the highways, and if not of sufficient value to pay the expenses, the same to be recovered from the owner, 73

May make and cleanse ditches, drains, &c. through lands adjacent to highways on paying for damages, 67

May impound cattle found on the highway without a keeper, 74

May detain any unknown offender, and convey him before a justice, 79

Under the direction of the justices, may agree for the recompense of land for widening the highway, 82

To make application for diverting roads under the direction of the vestry, 84

On receiving notice of appeal against an order for diverting a highway, &c., to deliver a copy to the person requiring the application, 88

Persons not acting as surveyor when chosen, to forfeit not exceeding 20*l.*, 8

May be dismissed by justices for neglect of duty, 11

To forfeit not exceeding 5*l.* for neglecting to produce books to any rated inhabitant, 40

To forfeit not exceeding 5*l.*, and double the money due, for refusing to deliver up books, &c., to his successor, 42

Monies due from surveyor to be paid by his executors in case of his death, and recoverable by action, 43

Not to have any interest in any contract for highway works or materials, or dispose of any without license from two justices, under a penalty of 10*l.* and being incapacitated as surveyor, 46

To forfeit not exceeding 10*l.* for neglecting to fill up gravel pits, &c., 55

To forfeit not exceeding 5*l.* for damaging property in obtaining materials, 57

To forfeit not exceeding 5*l.* for laying heaps of stone on highway, and allowing them to remain without precaution, 56

To forfeit not exceeding 5*l.* for neglect of duty, 20

**TEAM WORK.**—Any two rate-payers within six days after the appointment of surveyor, may require the surveyor to call a parish meeting, 35

If a majority of the rate-payers assembled at such meeting consent, the rate-payers keeping teams may divide the carrying materials for repairs among themselves, 35

Surveyor to pay for carrying by the cubic yard of material per mile, at a rate to be fixed by the justices in special sessions, 35

Team work to be performed as surveyor may direct (spring, seed time, and harvest excepted), 35

Pecuniary redress or forfeiture to be imposed by justices if surveyor shall not approve of the team work, 35

**TEMPORARY ROAD.**—Surveyor may use certain adjoining lands as a temporary road when the highway is out of repair, on making satisfaction, to be determined by the justice, 25

**TENANT FOR LIFE** may renounce damages for land and materials occupied by the highway on their property, 49

**TERMS, CONSTRUCTION OF, 5**

**TETHERING CATTLE.**—Any person tethering cattle on a highway to forfeit not exceeding 40*s.* and damages, 72

**TREASURER.**—Board of directors may appoint treasurer and take security from him, 18

All monies paid to the treasurer to be drawn by drafts or checks of the board entered by the clerk, 18

**TREES.**—No tree, bush, or shrub to be planted on any carriageway, or within fifteen feet from its centre, under a penalty of 10*s.*, 61

If the surveyor shall think any highway prejudiced by trees, any justice may summon the owner to the special sessions, 65

If at the special sessions the obstruc-

tion is ordered to be removed, and the owner shall not comply with the order, he shall forfeit not exceeding 40*s.*, 65

And the surveyor may remove the obstruction at the owner's expense, to be levied by distress, 65

No person compelled to cut hedges except between last days of September and March, 66

Nor fell timber trees in hedges, except when the highways are ordered to be widened and enlarged, 66

Nor then to cut down or grub up oak trees, except in April, May, or June, 66

Nor other trees, except in December, January, February, and March, 66

**TURNPIKE-ROADS** not included in this act, unless specially mentioned, 113

If a road out of repair is part of a turnpike road, the order to be made on the surveyor or treasurer, 94

No legal proceedings by presentment to be taken against any parish or person on account of any turnpike road being out of repair, 99

**WARRANT** to distrain for forfeiture, page 433

**WIDENING HIGHWAYS.**—Upon the view of two justices, they may order any highway to be widened, so as not to exceed thirty feet in breadth, 82

And not to pull down any building, or take away any enclosure, &c., 82

The surveyor, under the direction of the justices, to make an agreement with the owner of the land for recompense, 82

If he cannot agree, the justices at quarter sessions, upon certificate and proof of notice, to impanel a jury, who shall assess the damages, 82

On payment of the money assessed, the ground to be deemed a public highway, 82

Saving the mines, timber, &c., 82

The justices or quarter sessions may direct an additional rate for such purpose, if necessary, 82

Cost of proceeding, by whom to be paid, 83

These provisions to extend to highways repaired *ratione tenuræ*, &c., 93

Justices may fix the annual or other amount payable by party previously bound to repair, 93

**WIDTH OF HIGHWAYS.**—The surveyor to make, support, and maintain every public cartway twenty feet wide, and every public horseway eight feet at least, 80

And every public footway by the side of a carriage way, three feet if the ground will admit, 80

**WINDMILL.**—No windmill to be erected within fifty yards of any carriage-way, without being enclosed and concealed from the road, under a forfeiture of not exceeding 5*l.* per day during the its continuance, 70

Not to restrain the repairing, rebuilding, or enlarging of any existing mill, 70

**WITNESSES.**—Inhabitants and officers not disqualified from being witnesses, 100

Witnesses not attending when summoned before a justice, after expenses have been paid or tendered, to forfeit not exceeding 5*l.*, 102

NORTH DEVON HEIFER.

The Report of Mr. James Durrant, written and published by the Agricultural Society, 1835.

# THE FARMER'S MAGAZINE.

DECEMBER, 1835.

No. 6.]

[Vol. III,

## THE PLATE.

CURIOSITY, a Devon Heifer, bred by Mr. JAMES QUARTLY, got by Commander, d., (Duchess), by Mr. FRANCIS QUARTLY'S Protector, out of Graceful.

This beautiful animal is considered to be one of the most perfect specimens of the Devon breed, with regard to symmetry, smallness of bone, and other essential qualities. CURIOSITY is rising four years old, was fed eight months upon grass, and obtained the prize given by the DEVONSHIRE AGRICULTURAL SOCIETY, for the BEST FAT HEIFER.

### ON THE ADMINISTRATION OF THE NEW POOR LAW.

"Our whole connexion with the poor, should tend to awaken in them consciousness of their moral powers and responsibility, and to raise them in spirit and hope above their lot. They should be aided to know themselves, by the estimate we form of them. They should be rescued from self-contempt, by seeing others impressed with the great purpose of their being! *We may call the poor unfortunate, but never call them low. If faithful to their light, they stand among the high.* They have no superiors, but in those who follow a brighter, a purer light; and to withhold from them respect, is to defraud their virtue of a support, which is among the most sacred rights of man. Are they morally fallen or lost. They would still learn, in our unaffected concern, the worth of the fallen soul, and learn that nothing seems to us so fearful as its degradation".—*Taken from a lecture delivered by Dr. Channing, at Boston, U. S., on the 9th of April, 1835.*

TO THE EDITOR OF THE FARMER'S MAGAZINE.

Sir,—The lecture from which the above extract is taken, was delivered by Dr. Channing before the benevolent Fraternity of Churches; in Boston, and in language of the most refined taste it advocates the cause of the 'poor,' on principles of strict Christianity, and of the soundest philanthropy. It is a production worthy the perusal and best attention not only of every American, but of every educated person throughout the globe. It is an appeal which will be responded to by every wise head and feeling heart on either side the Atlantic, and it is to be fervently hoped, that the high moral duties therein inculcated, may receive the especial attention of the poor law commissioners of England and Wales, and that through them the reflection of the virtue of humanity may extend to their assistant commissioners, and by *their* precept and example to the several boards of guardians throughout the kingdom. I will now proceed to make a few ob-

servations on the first annual report of the poor law commissioners, which is dated the 8th of August 1835, and addressed to Lord John Russell as Secretary of State for the Home Department. The report commences by setting forth the difficulties which occurred to the commissioners from the misapprehension of magistrates and parish officers, in various parts of the country, as to the responsibility they were either relieved from, or placed under, by the new law, and the commissioners then state the precautionary measures taken by them to supersede this difficulty and to explain the real application of the act. The commissioners in this emergency appear to have acted alike with all possible industry and discretion, and these efforts on their part were attended with complete success; for no sooner were the different parish officers apprised of the fact, that they were bound to continue their offices entirely subject to the Central Board, (whose deputy the assistant commissioner, was shortly to be amongst them) than an immediate and magic-like improvement was observable in the distribution of all parish funds. A circumstance that at once speaks to the truth of the existence of the abuses which had entwined themselves into the old system. But it was also discovered that where these voluntary changes were made by the parish officers, the *considerable* saving was effected by adopting the most rigid economy towards infirm and old persons, from whom resistance, of a violent nature, was less likely to occur, than from the young; the strong, and the idle. This fact at once, I think, exemplified the necessity for the appointment of authorities for administering the poor laws, not in any degree locally connected; and this object was effected in the persons of the assistant commissioners. The report then states that one of the first instructions issued from the Board, to parish officers, as a preparative to the final adoption of the system, which it was the view of the legislature to carry into complete operation, was the gradual substitution of re-

lief in kind, that is—bread and other necessities—instead of relief in money; and this is stated to have been found a self-acting test of the validity of the claim for relief. I do not think the influence of this step was of so decided a nature as the report seems inclined to attribute to it, and which assuredly it would lay claim to, provided it could be shewn that it had the effect of a greater share of the pauper's allowance reaching his family, and then, which would of course follow, a less part reaching the beer-shops. But be the effect what it may, I think it is a very fair distinction to make between the payment of the allowance to paupers, and the payment of the wages of the employed labourer, because it is obviously necessary by every fair means to impress the fact that *they are paupers* on the minds of nine-tenths of the receivers of the poor-rate. From the payment of relief in kind the report proceeds to the mention of the work-house system, which it advocates on strong and able grounds, and places not only the *policy* but the necessity also of adopting this means of relief, as a principle beyond all reasonable doubt and question. The conduct of the assistant commissioners in respect to the formation of unions appears to have been guided with considerable caution and sagacity. That they have caused in some few instances dissatisfaction and complaint by their proceedings, is not a matter of surprise, when the extent of their undertaking is remembered, together with the conflicting interests and opinions they had to contend with, and in some cases the strong prejudices they had to combat, violently opposed to the uniting of parishes. There can I think, be no doubt but that the extending the area of management does wonderfully facilitate in all its stages, the object of providing for the poor of any section of country, far beyond any advantages which will arise either to the payers or receivers of poor-rate, in having the fund raised for every separate parish, separately distributed. In the words of the report—"where the districts are small, the dispensers of relief are more closely within the sphere of their own connections. Proprietors are more frequently called upon to decide upon applications from their smaller tenants or dependents. Occupiers who serve parochial offices are exposed to solicitations from their own labourers; and all retail shopkeepers have too frequently to decide upon claims to relief preferred or supported by their own customers."

In reference to the arrangements they have made for the discontinuing of all out-door relief, the commissioners state they intend "making the most speedy advance to a sound system that the circumstances of each district will allow." Now it certainly is the general impression that it is the intention of the commissioners *immediately* to stop all out-door relief, and consequently the allowance of flour usually made for *years past* to poor persons with large families will be stopped. How far it will appear to the commissioners that the "circumstances of each district will allow of this proceeding" remains to be shewn; but it certainly seems to me *impossible, suddenly*, to discontinue this practice without causing great and general distress. Nothing I am aware can be more reprehensible than the custom of allowing pay for children,

except where the statistical circumstances of a county will admit of a premium on increase of population; but at the same time this evil practice having been adopted and continued for many years, it is only bare *justice* that it should be *gradually* broken off. In fact, many of the arguments which were used in the House of Commons with *truth and effect*, in opposition to Mr. Daniel Whittle Harvey's motion for an inquiry into the pension list, might, with equal justice be applied to the long standing custom of allowing pay to large families. When Mr. Harvey brought his motion before the house, Mr. Frankland Lewis, the senior poor-law commissioner, was then in parliament, and although I have not at this moment the means of ascertaining the fact, I have no doubt he gave his vote in opposition to this measure, and consequently, it is fair to infer, from the high situation which this gentleman's character has now raised him to, that he is not a man capable of dealing out *law combined with equity to the state pensioners, and law devoid of justice to the parish pauper*. Let us hope that so much want of consistency and principle cannot exist in such a quarter, and that in respect to the allowance system to large families, we shall find Mr. Frankland Lewis disposed to extend the same consideration to the circumstances of the paupers, that we have found him disposed to extend to the circumstances of the pensioners.

The report states the considerations which mainly influenced the central board in the selection of their assistant commissioners, to have been the possession of sound practical knowledge, and experience of the subject matter of this commission, or the possession of acknowledged talent and general aptitude for the despatch of public business, &c.; and the report continues,—“Our assistant commissioner first visited West Sussex, upon the application of the local authorities, in consequence of a commotion which had arisen apparently on the approach of the change of system in the administration of relief, but really in consequence of the reduction of the ordinary wages of labour.” Now this is not exactly the fact. The reduction of wages at the period alluded to, occasioned by the reduced price of wheat, had undoubtedly some effect in causing the disturbances which occurred at that time, in this county; but it was the apprehension of evil to arise from the change of the poor laws, which was the chief cause of the discontent. The possession of the qualifications, which the report states “mainly influenced” the commissioners in the appointment of their assistants, was most assuredly wanting by the individual who was charged with the superintendence of this district. Unlike the principle, in the fable of the “Old man and his Ass,” who endeavoured to please everybody—the Western Sussex assistant commissioner, did not endeavour to please anybody, and yet exactly like the hero of the fable, in the result—for he pleased nobody. His task, I admit, was peculiarly a difficult one, but in the hands of a man of sound discretion, and possessing a mind capable of falling back upon itself in case of emergency or difficulty, instead of acting from rule,—which circumstances will constantly defeat—the real object of the amendment bill would have been for-

warded to a stage, considerably beyond its present progress.

In alluding to the formation of the unions, the words of the report areas follows :—"It is satisfactory to us, to be enabled to state, that in scarcely any instance have the measures thus submitted for a change of system in any district, failed of obtaining the concurrence of a large majority of the meeting. In the greater proportion of cases, the measures proposed have met with almost unanimous approbation." Now for all I know, the foregoing extract from the report, may be strictly the fact; but it is somewhat extraordinary as the measures of the commissioners were accepted in "*almost every instance*," that *two* exceptions from this rule, should occur in the immediate neighbourhood of which I reside. The union at Preston and the union at Sutton—both having been incorporated for many years past under Gilbert's act—*entirely rejected* the interference of the commissioner, and stoutly refused to dissolve according to his recommendation, in order that they might be re-united, and so become more immediately within the jurisdiction of the central board. As I have before observed, it is a little extraordinary, as there were "*scarcely any instances*" throughout the kingdom, in which the proposals of the assistant commissioners were *not unanimously adopted*, that in so confined a district of country as I have mentioned, these proposals for a change of system, in two instances, should have been unanimously rejected. Still the report of the commissioners may be strictly true. One swallow does not make a summer—and if the assistant commissioners only experienced in their several operations throughout the kingdom, the two cases of opposition which I have mentioned, they in perfect truth, might assert that they had met with "*scarcely any instance*" of opposition. But if I might venture to view the capabilities possessed by the Western Sussex assistant commissioner for the situation he filled as a fair sample of the qualifications for their situations of the fifteen individuals who are appointed as assistant commissioners, and if I might also be allowed to view the success of this one commissioner (at the several meetings of magistrates and guardians, which he had convened for the purpose of forwarding the object of the amendment bill,) as a fair sample of the aggregate success of the whole fifteen—the conclusion I should arrive at would be directly at variance with two material parts of the report, viz., the possession of the qualifications therein enumerated, and which it is stated the central board had secured in the persons of their assistants; and the assertion that these assistant commissioners had met with "*scarcely any instance*" of opposition. The truth is, it was the detestable table of St. Georges, Hanover square, the indiscriminate parting of man and wife, and the expedient of joining several parishes together, to get to any medical man whose tender for the job happened to be the lowest, which had the effect of raising the fears of this neighbourhood, that the remedy for the evil which the commissioners intended to apply, was alike violent and injurious, and this calling forth an independent and successful opposition to submitting to their yoke.

All the objections set forth in the report to the continuing of the unions which have been formed under Gilbert's act, may, and I think do, apply strictly to the question; but these objections in my mind, are certainly of less importance than the objections to the new system which I have enumerated above, and in this feeling I certainly do not stand alone, as the result of the attempt of the commission to dissolve the two unions I have mentioned, for the purpose of re-unionising them more immediately under the jurisdiction of the central board, fully exemplifies. The observations which are submitted to Lord John Russell, by the commissioners in their report, in defence of their separating able-bodied married couples in the workhouses, apply exactly to, and thoroughly justify this course in the case of the willing, and if I may use the term, *professional paupers*, but in every other instance, in my mind, these observations are completely inadmissible as a justification of such a proceeding, but the grounds which are stated in the report, why the application of the rule should be extended to the old and infirm, are alike ridiculous and unfeeling. The commissioners to support their views in this instance favoured his lordship with the evidence of Benjamin Quarterman Simons, master of the workhouse of Aylesbury, and who by stating to the commissioners that two old married couples had requested for their mutual comfort to be separated, had satisfied the commissioners that there was no hardship in an objection to follow this course—no violation of the laws of nature, and no disregard to the respect, and kind, and considerate feeling due to gray hairs in poverty and misfortune.

I recollect when I was at school, that a boy who was proverbially careless in his studies, had to present to the master his first attempt at Latin versification, which he had performed in a sort of new writing book expressly supplied to him for that purpose. There was a dead silence in the school, an event was expected—and it soon arrived in the shape of the reverend gentleman throwing the book at the boy's head, so immeasurably unmeasurable was the performance, as the result has shown, of the embryo scholar. Now I am not aware what form it was requisite for the commissioners to go through in presenting their report to Lord John Russell, but if all form was dispensed with, and one of the commissioners merely marched up to Lord John Russell with the report, as the hapless boy did to the pedagogue with his verses, and if Lord John Russell's eye had by chance fallen on the evidence of Mr. Benjamin Quarterman Simons, and he had not immediately thrown the document at the head of the commissioner, I would at all events have given him the credit of possessing far more philosophy and self-restraint than the schoolmaster I have mentioned had at his command. Before the poor law commissioners draw up their next annual report I hope some chance may draw their attention to Bloomfield's simple story of "Richard and Kate," and which will I trust operate on their minds as a sort of counteraction to the famous evidence of the master of Aylesbury workhouse, respecting those notable personages, old Evitt and his wife and old Hearn and his wife, who it seems

wished to live separately, and who because they happened to possess unnatural feelings, are made subjects of the poor law commissioners especial attention, and introduced as becoming objects to influence the commissioners in deciding on a principle which will affect thousands.

I must now take my leave of the *report for the present* on which I wish to make some further observations on a future occasion, but which I shall be prevented from doing in my next paper, as I then hope to give you an account of the cattle shows at Arundel and Chichester.

In my last letter, your printer has made several errors. Promised Lord, for *promised land*, in the first paragraph; for "in partially applying," read *practically applying*; for "reputation of a man and his wife," read *separation of a man and his wife*. There are several other trifling mistakes.

I am sir, your obedient, and very humble servant,

AGRICULTUR.

Sussex, 17th Nov., 1835.

### No. XIII.

## TO THE EDITOR OF THE FARMER'S MAGAZINE.

It is the very error of the Moon;  
She comes more near the Earth than she was wont;  
And makes man mad. OTHELLO.

SIR,—In this age of wonders we daily find some conjuror discovering something so out of all character, that it is well we can give a reason for men spinning cobwebs out of their brains in the manner they do. It is the Comet! nothing but the Comet! and we may suppose Mr. Robinson, M. P., must be particularly under the Cometary influence when he gets up and tells the world it is "absurd to say there is general distress amongst the agriculturists."—A fact admitted on all hands, and acknowledged in the speeches from the throne, without contradiction. Upon what ground does he deny this distress? Why he has travelled from Worcester to Leicester, and saw no distress, and some one has told that further North things were better. Now this worthy gent. travels in his carriage probably with both windows up to prevent his having the tooth-ache, or a sore throat, and in travelling in this way some hundred miles, at the rate of ten miles an hour, do not you think he has had sufficient opportunity to form a correct judgment of the state of the farmer? Perhaps as he was thus taking care of his valuable carcass and conning over in his mind how he is to astonish the house he espies a character well known in the Southern counties under the denomination of a Scotch drover. Sawney is enjoying his crowdy by the road side, and the M. P. thinking this a fine opportunity to learn something which may be of use in his forthcoming speech, orders his drivers to pull up. Note Book in hand, he commands his inquiries, and Sawney tells him of wonders sufficient to enable the hon. gent. to contradict all the statements of the farmer's distress, and prove to the world though he, if selling his produce on an

average thirty per cent. less than it costs him, still his situation has little to complain of.

Now really, Mr. Editor, can this sapient M. P. be in earnest, or can he be in jest? Does he ever read such a thing as the advertisements of the country newspapers, because the weekly announcements there of the sales of farming implements and stock must be sufficient to convince any one whose head is not as thick as a plough beam, that from his speech the other day at the Worcestershire Agricultural Meeting he had been most egregiously imposed upon by some body. However, as he seems convinced of the authenticity of his information, he will probably be kind enough at some early period to tell your readers in what part of England it is to be found that happy spot, which can afford to grow wheat at 37s per quarter, mutton at 4d per pound, and beef at 5s per stone? Even rent-free, when he can prove these is such a place in England—the world will give him credit for having used a microscope to discover it.

But, Sir, he tells us the farmers must give up many of their enjoyments to meet the times. This is just was gents. of his creed want to be at. They want the farmer to be pauperized, that gent. manufacturers, and traders may ride over them with impunity. They want the farmer to be reduced to a pair of clogs, a smock frock, and a gill of small beer; whilst the man who has had the good fortune to be apprenticed to a ribband weaver, or a pin maker, cannot be expected to drink anything inferior to claret, or wear a coat cut by a less fashionable maker than Stulz. They want to engross all the law making business to themselves; as if their shop-boards had inspired them with all the wisdom in the nation. It seems curious enough that, because a man employs his skill and capital in the cultivation of the soil, whatever his education may have been, whatever his capital, and almost, whatever his family, he should be considered of a different genus, reduced to a clod-hopper, a mere bacon *chawer* and brought to a level with the beasts he grazes; and every fellow who retails an ounce of snuff can claim precedency of him and pretend to laugh at his awkward attempts to keep time in the new Contra Dance called the March of Intellect.

But, Sir, there is one thing in the farmer's power will put all these fellows right: let every farmer immediately reduce his expences to the smallest possible amount, as regards purchasing goods or tradesmen, let him live within himself, and let him curtail the ribband and silk purchases of his establishment; very soon Mr. Richardson's clique will find new ideas, see with a different vision, &c. knowledge our distress and find us a remedy. Touch the tradesmen's return and reduce their profits, you will soon hear of something to be done for us. The minister of the day will readily make an advance of Exchequer bills to the tradesmen to prevent his prices being depreciated, and the farmer may ask to have a small slice of this favour; a boon which if it had been granted two years ago would have prevented many a manly bread from being torn by distresses; many a helpless widow and orphan from being turned into the world and to die in a ditch.

Yes! says the free trade advocate, but you know they were only farmers. I am,

Yours, respectfully,

A YORK'S FARMER, OCCUPYING 500 ACRES.

N. B.—What really amuses me in this matter is, that these tradesmen expect we clodhoppers to breed horses for *them*, but not to ride ourselves; to grow white wheat for them, whilst we eat rye bread; to send them our poultry, eggs, in short the whole of our produce at almost half the price it costs us and think ourselves highly honoured by their condescending to eat it!

No. XIV.

#### TO THE EDITOR OF THE FARMER'S MAGAZINE.

SIR,—Walking over my farm the other day, I observed that part of my spring seeds which was sown with barley, to be looking much better than that sown with other grain, and as each was from the same sample, and manured alike, I cannot satisfactorily account for the different appearance. The same fact, I believe, occurs in most counties, and I shall be much obliged, if, through the medium of your Magazine, any of your correspondents will favour me with their opinion as to the probable cause of the difference.—I remain, Mr. Editor, your obedient servant, J. B. C.

#### ROYAL AGRICULTURAL SOCIETY.

Some time since, we suggested the propriety of establishing a Central Agricultural Association in the metropolis, for the purpose of communicating with all the local associations throughout the kingdom, in order to concentrate the strength of the agricultural body, and render efficient that force which, for want of organization and union, was utterly inefficient. The necessity of such a course having attracted the attention of several gentlemen, many of whom are members of Parliament, and all deeply interested in the cause of agriculture, a provisional committee has been formed for the purpose of establishing a Head Society in the metropolis, to be styled "THE ROYAL AGRICULTURAL SOCIETY." The primary object, as stated, will be to form a centre of communication for the societies established throughout the United Kingdom, whereby the interests of the farmer may be protected, and, when necessary, brought under the notice of government with more effect than can be accomplished by partial or local exertion, and, as specified in the language of one of the resolutions of the *provisional committee*, "to promote the introduction and enactment of such measures as may be deemed beneficial to that great interest, *so far as may be consistent with the prosperity of the other branches of industry.*" The vast advantages which Scotland has derived from the "Highland Agricultural Society," leave no doubt that great practical improvement may be effected in the science of agriculture, by the exertions of a society similarly constituted. The main object of a Central Society

being to secure the aid of the local associations, communication has been had with many of them, but the "East Suffolk" is the first at which the propriety of co-operating with a Central Society has been openly discussed, and at which a deputation from the *provisional committee* attended. Resolutions approving highly of the proposed plan were carried unanimously, and several gentlemen, members of the "East Suffolk Society," were appointed to co-operate with the Central Society. It is fully expected that most other societies will follow the example of the "East Suffolk," and that (thanks to the low price of produce) the yeomanry of England will at last "arouse themselves." It cannot be for an instant doubted, that a body thus organised, having no *political object* in view, and acting on the principle of protecting its own interests, "*so far as it may be consistent with the prosperity of the other branches of industry,*" may be productive of eminent national advantage. Its success, however, will depend upon the discretion of those individuals who constitute the local associations, but most of all upon the temper and judgment of the Central Society. We have had a remarkable instance in the last session of Parliament, of how much may be effected by mutual concession and community of purpose. The difference of opinion which exists among agriculturists on the Malt Tax and the Currency, is not greater than that which subsists, and still subsists, between the Whigs and Radicals upon many important political points. They consented to merge their differences for one common object, and they succeeded,—so will the agriculturists if they *strictly* follow the example. We regret, however to be compelled to observe, that the commencement made at the East Suffolk meeting was by no means auspicious, and we notice it as a warning to those who may take part in the proceedings of other societies. There are modes of relief upon the propriety of which all parties are agreed, and which, although not sufficient to place the agriculturist in his proper station, will afford him some benefit. These are attainable,—they should be made the primary object, to the exclusion of all others upon which parties are divided, or the failure of which may be clearly predicted from recent experience. The mooted of such questions at agricultural meetings creates a division, and thereby displays a weakness which cannot fail to delight the enemies of the agricultural interest. But above all, the use of intemperate language towards, or abuse of other *interests*, whether commercial, manufacturing, or monied, is not only in direct opposition to the principle of protecting their own interest, "*so far as it may be consistent with the prosperity of the other branches of industry,*" but must of necessity induce those interests to unite against them in self-defence. The introduction of the Currency question at the "East Suffolk" meeting was injurious to

the object of the meeting, and most injudicious in those who anticipate benefit from bringing it forward. If we are credibly informed, when the subject was introduced a majority of the individuals comprising the meeting retired, leaving about thirty persons only in the room. It really does seem to us that if the advocates of an alteration in the Currency had desired to bring the subject into disrepute, they could not have hit upon a better plan. It is not the discussion of the question which we object to, but the *time and place*. A meeting of deputations from various Agricultural Associations, was held at Aylesbury, on Thursday, November 12. The Marquis of Chandos presided, and after having stated the object of the meeting, impressed with great earnestness upon the minds of his hearers the absolute necessity of avoiding the introduction of all collateral questions, and adhering rigidly to the single subject of agricultural distress. His words were, "Depend upon it you will fail in your object if you mix other questions with that of agricultural distress." The Noble Marquis demonstrated most clearly the certainty of success which must result from pursuing a course which would insure UNION, and the irretrievable ruin to the cause which must follow a *division* of strength. "In this county," said his Lordship, "our society is united—we have felt the good effects of it. But if the agricultural societies are divided amongst themselves—if they think differently as to the modes of obtaining relief, we shall most decidedly fail. *If we once become disunited we lose our strength never to gain it again.*" (*Hear, hear.*) This is the deliberate opinion of one who from his devotion to the cause of agriculture is very generally, nay, almost universally styled "*the farmer's friend.*" Will not the farmers then, and more especially those gentlemen who have been delegated from the several agricultural societies, rely upon his judgment, and for a while at least commit themselves to his guidance? We expressed our regret at the introduction of the currency question at the East Suffolk meeting, and we cannot but express our astonishment that, in despite of the advice of the Marquis of Chandos, supported by Sir W. Young and several other gentlemen, the currency question should have been introduced at the Aylesbury meeting, and that too by a gentleman whose extensive knowledge and habits of business must have taught him, that in the ordinary pursuits of life the success of an undertaking is often blasted by the want of judgment of its projectors, even when ample means of carrying it into effect are possessed. Inquiry into the *means* of obtaining relief for the agriculturists forms no part of the duty of a meeting called "to consider the propriety of co-operating with a Central Society." That will be the proper subject of discussion for the delegates of the local associations, when formed into a Central Society in London, and should be left to

their discretion. If the opinion once prevails that the agricultural body is about to establish a system of co-operation and union for the purpose of advancing its interest by tampering with the interests of other classes, there will be an outcry raised from one end of the kingdom to the other, which will prove fatal to any attempt at legislative interference. The course proposed at Aylesbury is certainly most prudent and rational, namely, to obtain as early as possible in the next session of Parliament a committee to inquire into the causes of agricultural distress. There is little doubt but that such a motion will be carried, and if upon a patient investigation of the subject the evidence shall lead to the conclusion that the alteration of the currency is either one of, or the sole cause of, the existing distress, the committee will report accordingly. For the present, however, we have the authority of the *Standard*, a newspaper especially noticed at the East Suffolk meeting, as an able advocate on the currency question, for saying, that "the best service that can be rendered to the agricultural interest is to fasten upon their minds the conviction that they have no hope from an enlargement of the currency, because such an enlargement is a *moral impossibility.*" It is not by any Utopian plan, not by any schemes which may shake the national credit, or convulse the highly artificial state of our monied, manufacturing, or commercial relations, that relief to the agriculturists can be obtained, but by the adoption of such measures as, by their propriety and justice, will bring conviction home to the minds of men of ordinary understandings and business-like habits. Upon the whole the meeting at Aylesbury was satisfactory, and we rejoice to find that the most zealous advocates for the establishment of a Central Society are resolved as far as possible to assimilate it to the Highland Society of Scotland. We subjoin the prospectus put forth by the *Provisional Committee* of the Central Society, for the consideration of our readers, and shall, in our next publication offer some further observations upon the plan.

It is proposed, under the auspices of the King, his Government, the Nobility, and the Landed Interest, to form in the Metropolis, the great seat of activity and knowledge, a Head Society, to be under the direction of a BOARD OF AGRICULTURE, for the following objects:—

1st. To watch over, superintend, and protect the general interests of the Local Agricultural Societies throughout Great Britain and Ireland; and to enable them, when necessary, to press these interests on the notice of the Government, or the Legislature, with greater effect than it is possible to accomplish by partial or isolated remonstrance.

2nd. By means of central and district Boards of Correspondence to call forth, combine, and direct the exertions of the Agriculturists, as a body, whenever their interests are assailed, or whenever any measure may be brought forward by the Government or the Legislature, which may be thought to be injurious to the prosperity of Agriculture; and, on

the other hand to promote the introduction and enactment of such measures as may be deemed beneficial to that great interest, so far as may be consistent with the prosperity of the other Branches of National Industry.

3rd. To procure a Public Building, to be called "*The Royal Institution of Agriculture*," to contain a Library, Museum, Lecture Hall, and other Apartments, where periodical Meetings of the Society may be held, to hear read the Reports from the various Committees of the Society, and from the Local Corresponding Societies; also Lectures, Essays, and Papers, upon subjects connected with the theory and practice of Agriculture, and rural economy in general.

4th. To patronize, arrange, and superintend a Grand Annual Meeting of the Society, in some County of England, for purposes similar to those which take place yearly in Scotland under the direction of the Highland Society, and in Ireland under the Agricultural Society of Ireland.

5th. To examine the progress of Mechanical Locomotion in its various bearings upon Agriculture, Trade, and Commerce.

6th. To form a centre of communication for the Societies established throughout the United Kingdom, that have for their object social improvement, and to correspond with Foreign Societies. Further, the Institution would serve as a focus of resort and intercourse for all members of Local Agricultural Societies, visiting the metropolis, or resident in it.

7th. To give Premiums and Medals for such objects as fall within the scope of the Society; for improved Implements or Machines for Agriculture; also for inventions generally of national utility; for Essays, Papers, &c., upon subjects of national importance.

8th. To promote the establishment of Agricultural and Veterinary Professorships, Experimental Farms, and Schools throughout the Country, for the instruction of Farmers' sons in the Sciences applicable to Agriculture, &c.

9th. To take in all the Periodical and Scientific Publications upon subjects that fall within the scope of the Society's object.

## ON AGRICULTURAL DISTRESS.

MR. EDITOR,—Having been led to forward you some observations on the State policy during a remote period, as being contrary to modern practice, I proceed to shew the effect of supply and demand on prices, in hopes of removing an erroneous opinion as to the effect of the change of the currency, and to shew that unless we have ample protection from foreign competition this country can never be prosperous. That alone, I admit, is not sufficient; but as a national question it is the most important.

per qr.  
During 8 years from 1747 Wheat averaged 64s 11d  
During 8 years from 1747 but..... 32s 10d

The cause of the *high price* of Wheat in the 16th century is stated to be from the produce being but threefold; viz., they sowed 4 bushels, and reaped but 12 on an average, from inferior tillage, from the crops being frequently infested with smut, and other blights; viz., the supply did not equal the demand.

The cause of the *low price* in the 17th century is related by Thomas Simpson, Esq., of Cleveland. He says, that the distemper carried off one half of the horned cattle over the kingdom in 1715, and that the pastures were broken up, and that the

increased breadth and ample produce of the new lands caused the supply to exceed the demand, and reduced the price. It was two years before it was suitable to the growth of Wheat.

But that in 1747, 266,906 qrs Wheat were exported.  
1748, 543,387 ditto.  
1749, 629,047 ditto.  
1750, 947,600 ditto.

And that during the four following years export decreased in nearly the same ratio as it had increased during the previous four years, from the less and less produce of the lands from being worn out by successive cropping, as was the practice at that period: but during the 8 years 4,133,456 qrs were exported. *Here export ceased, and import soon began*, and we have imported ever since.

In 1795 Wheat rose to 74s 2d per qr, and in 1796 to 77s 1d per qr, and unlimited import in foreign vessels was permitted, and 2,826,947l had been paid in bounties, in 7 years; and the value of Foreign Corn imported from 1792 to 1803 was 58,634,435l, the whole of which was paid for in gold.

From the facts here recorded, we find that war in itself does not raise prices, as the price of corn was lowest during the American war.

From 1795, during the French war, there was more difficulty and greater expense in importing corn; and thus it ruled high till 1802. The London average price of

|               |      |     |      |      |         |
|---------------|------|-----|------|------|---------|
| Wheat in..... | 1800 | was | 123s | 11d  | per qr. |
|               | 1801 |     | 116s | 8d.  |         |
|               | 1802 |     | 69s  | 11d. |         |
|               | 1803 |     | 59s  | 11d. |         |
|               | 1804 |     | 67s  | 2d.  |         |

The variation in price during this short period shews more clearly the effect of supply and demand, and of a continental war, than any heretofore. There was no "tampering with the currency" then. The paper currency was in full operation, and credit upon credit interminable during 1803 and 1804, yet the price fell to nearly one-half the former amount, and had the peace continued, would have fallen as low as in 1822, and as at the present moment.

"In 1802 grain and flour to the amount of 10,149,098l was imported into this country, and in 15 years, ending with 1813, the sum of 46,582,776l was paid to foreigners for grain and flour."—*Vide Ipswich Journal*, Sept 10th, 1817.

The effect of the short peace and import is as follows:—

In July 1801 the price of wheat was 143s per qr. and receded to 66s in November. In July 1804 but 55s per qr, and in November, 102s per qr. This shews the *instant effect of peace and war*, when it interferes with import; and it must be so whilst we continue habitually dependant on foreign supply.

From 1804, prices ruled high from the difficulty of import, and the cost of insurance, freight &c., and highest during the operation of Buonaparte's Berlin decrees, prohibiting all nations under his controul from having any intercourse with us.

The London average for 1812 was 131s 6d per qr, and for 1813, 111s 9d per qr. In July, 1813, the average was 124s per qr; in August, 108s per qr, but receded to 75s in October.—(See Major Moor's Monthly and Yearly Averages.)

Here we see the effect of *even the prospect of peace and the continent being opened to us*; and the still greater effect of its reality. The average in

1814 was 52s, and in 1815, 52s 6d. (I believe however, this was the general average.) There was no lack of paper money or credit at this period, and the farmers could hold their corn from having capital unemployed, and the merchants and millers could speculate to any amount; hence it is evident that Mr. Pitt's Suspension Act did not cause the high price of produce.

The ruinous effect of unlimited import induced the Parliament, in 1814, to consider of the best means of meeting the emergency of the case, and Sir Henry Parnell proposed 105s as the import price; this was opposed, and the Bill was delayed chiefly through the neglect or opposition of Mr. Rose, and it stood over till 1815, when an inefficient Bill was passed, but during the delay a great import had taken place; and the more, no doubt, from the subject being discussed in 1814, as, if the ports were closed, it would insure a profit on free foreign corn. A short Bill should have been passed to prevent import, to give time to consider so important a subject.

Thus far, the mere relating of facts is sufficient to shew that import was the sole cause of the depreciation of prices below the natural standard of value, or remunerating price. That price which would continue to stimulate to produce till our own growth was equal to the consumption, and create a demand for labour, and goods, and wares, and increase the consumption of colonial produce, and thus increase the revenue.

The crooked policy which has been pursued of late is a more difficult matter to treat of; whether I shall venture to proceed, I cannot say; but thus far, "I hope I don't intrude,"

And remain your humble Servant.

CHAS. POPPY.

### ON AGRICULTURAL DISTRESS.

Mr. Editor,—I find it is considered that my last letter ended where I need only to have begun. On the contrary, I think that by shewing by facts and figures, that Mr. Pitt's Bill did not uphold prices one hour after the war ended in 1801, nor at the end of the war in 1813, it must be evident that it was not the paper currency which caused the high price during any period of the war, and that we may infer that Mr. Peel's Bill of 1819, was not the cause of the fall in prices; but I find more proof is required.

I am told, that I am "rather hardy," in maintaining my opinion in opposition to Cobbett, Attwood, Lord Western, and ninety-nine out of a hundred other persons!

I am not aware, that when the Corn Bill of 1815 was under consideration, that even one Member of either House of Parliament supposed that the currency had any effect on prices; or why pass the Bill? It would have been a dead letter—it would have had no effect if the currency ruled prices.

In 1822, when a new Corn Bill was passed, the currency was not supposed to have caused the fall in prices; or why alter the Bill? Or why not adopt a free trade system?

Petitions, containing 100,000 signatures, praying for protection from foreign competition were presented during the session of 1822, and it never entered the heads of the petitioners that Peel's Bill of 1819 had caused the fall in prices of produce. Counter-petitions from the manufacturing districts and towns poured in against protection, from which we may infer that the currency was not thought of as being the means of reducing the price.

Thus, I am not "*singular in my opinion*;" but, on the contrary, every class, and everybody, shew by their acts and deeds, that they believe that the currency has no effect on prices, and every day we live, facts stare us in the face to convince us that supply and demand only rule prices.

It is significantly hinted to me, that from my last letter it appeared I did not intend to proceed in reviewing past events.

I certainly did not, because I considered I had given a sufficient outline of my arguments in favour of my well-known opinion, to enable those who differ in opinion to detect where my error lay, or their own; but, lest it may be inferred that I foresaw any difficulty, I will proceed to shew the cause of the fall and rise in price from 1817 to 1825. In 1817, the price of wheat rose from 53s. to 112s. 2d., and dropped to 74s. from the promising appearance of the crops causing speculation, and the sudden change of weather in June reversing the prospect. The currency did not cause the rise. During 1818, and up to February 19th, eight million quarters of corn were imported, and we having imported but two millions of quarters of wheat per annum during a series of years previous (and this during the waste of war) it was evident that this immense import would glut our markets for years; and in lieu of this being a difficult period to ascertain the real cause of the fall and subsequent rise in price, it is the only extended one where no difficulty exists, whether failing or abundant crops, false rumours, &c., occurred at other times; but here nothing of the kind happened. The farmers held back their corn in 1818 and 1819, in hopes of better prices. In 1820 and 1821, the price still continuing to fall, more and more corn was brought on the markets, both by the farmers and the corn-merchants, who had stored what they had bought, by which numbers were ruined. The foreign speculator had fed the markets cautiously, just below the home supply, but began to be alarmed, and sold freely. In 1822 a general panic ensued. Members of Parliament, in their places, asserted, that we grew more than we wanted, and that protection was of no use to us, as we had no import since 1819, and the price receded to the minimum; viz. a hog-feeding price, for which purpose it was extensively used, and thus it was wasted, and the surplus cleared off.

What effect, I would ask, could "Peel's Bill of 1819" have on prices during this long-continued depression? Those who had not money or most credit were the greatest losers, and thousands were ruined by having credit, and many ruined those who lent them the money to enable them to hold, and if the corn could have been held, it would only have protracted the depression.

The extension of time allowed for the circulation of one pound notes prevented the markets being glutted, just after the harvests of 1823—4, and 5, but the corn so kept back came upon the markets at a future time and prevented a further rise in price, as a one pound note circulation always would do, during a short duration of glut and low prices: it prevents extremes occasionally, but has no effect on average prices. Inefficient protection gives us an inefficient average, and nothing but ample protection can give us remunerating prices, viz., a legitimate price according to cost of production; and if foreign corn was prohibited, the price would be no higher than a remunerating price, because ample profits would induce exertion to raise produce till the supply exceeded the demand. This is a sub-

ject the community in general do not understand, or they would not object to protection.

The holders of foreign corn, it seems, are about to petition (or to endeavour to obtain an order in council,) for permission to grind it and make it into biscuits to export; but half of it would be sold as offal, and come in contact with oats, &c. This would put cash into their pockets to purchase more foreign corn, and tend to reduce our prices; they would not import wheat just now, but oats or other grain that may be at a fair price. This brings to mind a similar circumstance in June, 1826. The Liverpool merchants raised an alarm of scarcity, and got Mr. Huskisson (the then Member for Liverpool,) to obtain an order in council to liberate 700,000 quarters of wheat, and this meeting our new crop in the market, put down the price 20s. per quarter, and thus blighted the hopes of the English farmers of recovering a portion of their former losses, and a million and a half was put into the pockets of these legal smugglers, to renew their baneful trade. There was no even-handed justice, no order in council, no short bill, to stop the import, whilst thousands of farmers were ruining in 1818; nor last year, to stop the import of barley, oats, and beans and peas, which did not fetch a remunerating price, as they were failing crops, and thus still more reduced the price of wheat. Wheat was at a minimum last year, viz., a hog-feeding price, but the lowest price to which it can recede, is, to that point at which it pays better to feed hogs, and cattle, and horses, than other corn, and thus, had we had no import of other grain to keep down the price, wheat would have been used for feeding at a higher price. The minimum price of wheat is not a fixed standard, but relative to the price of other grain; thus, wheat is still lower this year than the last, because other grain is lower. I am, Sir, &c.

Witnessham.

CHAS. POPPY.

### THE CURRENCY.

MR. EDITOR,—When great distress prevails in a country, or amongst any considerable portion of the community, the political economist seeks for the cause, in order that a remedy may be devised for the evil. It is, I believe, generally admitted, that the agricultural interest of this kingdom is in a state of great depression; and it is of the utmost importance to ascertain the true cause of that depression, lest, by groping in the dark, the friends of agriculture, waste their time and energies in combating shadows instead of attacking the substance.

Your correspondent, Mr. Poppy, thinks "*supply and demand only (alone) rule prices*," and the "*currency has no effect on prices*," and consequently Mr. Poppy thinks, that to prohibit the importation of foreign corn would remedy all the ills of the agriculturists.

I do not deny that prices are affected by supply and demand, though I may be allowed to suggest, that the true criterion of prices is the cost of production; and that when prices are lowered by a glut in the market, or increased by an unexpected brisk demand, these are the exceptions, and that cost of production is the rule by which prices are regulated.

It is not my intention to follow Mr. Poppy through his "facts and figures," though I believe it would be very easy to show, that most if not all, the great fluctuations in the price of corn, within the last forty years, may be traced to the changes

in the currency. Leaving that, and supply and demand, and cost of production out of the question for the present, I wish to put a question to Mr. Poppy on the subject of the currency.

Suppose this country produced sufficient corn for its consumption, and that there was little or no importation or exportation of corn, and that the circulating medium, consisting of paper and gold, amounted to twenty millions, wheat being at 60s. the quarter (fluctuating, of course, in some degree, by the plenty or scarcity of the harvests; ) and suppose, on a sudden, by withdrawing the paper and by the failure of supply from the mines, or other causes, the circulating medium of the kingdom should be reduced to two millions, I would ask Mr. Poppy the following question:—Would wheat continue at 60s. the quarter?

Without meaning any disrespect to Mr. Poppy, whom, on the contrary, and whose motive I respect, I must say I should think him "*rather hardy*" to answer this question in the affirmative.

I am aware that such a change in the circulating medium as above supposed, would not materially derange the affairs of a country, if there were *no existing liabilities or unperformed contracts*; seeing that the only consequence would be, that the quarter of wheat, which before sold for 60s., would sell for only 6s.; and the last which the farmer had previously purchased at 20s., would cost only 2s. But if such country were burdened with a debt, the annual interest of which amounted to upwards of thirty millions of pounds, when the circulating medium was twenty millions, and that such a debt continued in full operation when the circulation was reduced to two millions, it requires no conjuror to discover, that the productive interests of the country must suffer, and in many instances be entirely ruined, whilst the unproductive classes, and those who lived upon the taxes, &c., of the country, would reap the benefit of the change and riot in luxury. Whether the situation of any country in the globe at all assimilates to this picture, I leave to every one to form his own opinion.

Mr. Poppy thinks the currency has nothing to do with the distress of agriculture. I think it almost the only cause—of course, an enormously large debt, and other things, operate against the productive classes, but Peel's Bill alone is amply sufficient, in my opinion, to cause the present distress. I remain your's, &c. L.

Hon. Secretary to the Committee of Baronets.

Hadleigh, Nov. 3, 1835.

### AGRICULTURAL DISTRESS.

At a meeting of the Land-owners and Occupiers of Land connected with the county of Worcester, held at the Crown Inn, in that city, on Saturday the 17th Oct. Sir Anthony Lechmere, Bart. in the chair, it was resolved that the following Address to his Majesty be adopted, and signed by the Chairman on behalf of the meeting, and that the Earl of Coventry and Earl Beauchamp be requested to take the earliest opportunity of presenting it to his Majesty:—

"To the King's Most Excellent Majesty

"To your Majesty we earnestly look, and we confidently expect at your Majesty's hands to receive that relief of which we stand in the most extreme need, which is so justly our due, and which we have in vain long sought to obtain both from your Ma-

jesty's Ministers and from Parliament. That your Majesty well knows the deep distress under which the landed interest has long been suffering, and now continues to suffer, your Majesty's most gracious recommendation to Parliament to take the state of that important interest into their consideration fully evinces; and your Majesty's gracious condescence with that once encouraged, but now neglected interest, frequently expressed in your Majesty's speeches to Parliament, afforded great alleviation to us in our difficulties, and encouraged us to follow the recommendation of a Committee of the House of Commons in 1833, to rest our hope of melioration rather on the cautious forbearance, than on the active interposition of Parliament.'

"We beg most respectfully to submit to your Gracious Majesty, that two years have elapsed since that recommendation was made—that the prices of produce declared by that Committee to be then ruinous to the landed interest, have since greatly decreased—that the burdens which press peculiarly upon the land may be said to remain the same, so very trifling have been the reductions, while in the mean time several most important reductions have been made in those taxes affecting the commercial and manufacturing interests—interests which your Majesty had the happiness of being enabled to state to Parliament were then in a highly prosperous situation. That the landed interest should have thus been overlooked in the reduction of taxation is enough of itself to fill us with alarm; and we cannot refrain from laying before your Majesty the serious apprehensions we are under that it is not intended to grant us any relief, but that we are to be left to our fate. Under that impression, we presume to approach the Throne with our humble and earnest request that your Majesty will be pleased to direct your Ministers to institute an immediate, full, and impartial inquiry into the cause of that distress, which every one now admits overwhelms the landed interest; and that your Majesty will not suffer that interest, which the soundest politicians of every age have held to be the most important of every country, to be neglected and destroyed.

"We beg humbly and dutifully to call your Majesty's most gracious attention to the circumstance, that distress first attacked the landed interest when the present standard of value was adopted—a standard of value which never had been the standard of value in this country, but was a new and arbitrary standard, although it was adopted under the specious pretext of returning to the ancient standard;—that the effect of adopting that standard has been more than to double all the then fixed burdens and incumbrances, and to lower the value of land and the price of produce to one half, and that nothing can save the landed interest from ruin but the adoption of a just and practical standard. We also beg to represent to your Majesty, that it would be a great mitigation of the evils under which the farmers are suffering, if they were permitted to malt inferior grain, the produce of their own farms, for the food of cattle on their own premises, duty free. In conclusion, we earnestly and humbly, but at the same confidently implore your Majesty to be graciously pleased to take into your Royal consideration the distress under which the landed interest in general, but especially the laborious and meritorious tenants, are now suffering; and that your Majesty will not permit those whom you may see fit to call to your councils any longer to trifle as they have done, and are now doing, with that once valued and flourishing interest, but command the adoption of measures calculated to restore its prosperity, a result in which

all the other great interests are equally concerned; for unless the impending ruin be averted, it will overwhelm every other interest, and involve the country in anarchy and confusion."

## TO THE EDITOR OF THE NORTHAMPTON MERCURY.

SIR,—Will you allow me to offer a few remarks through the medium of the Mercury, upon the malt tax. It is possible that my views may not coincide with your own upon this subject, but I am sure you will not consider this an objection to my stating them. Two important questions deserve consideration—First, in what way would a reduction of half the malt duty benefit this country? Secondly, will the state of the revenue admit of such a reduction? With respect to the first question, I beg leave to submit the following answer. It would reduce a tax that presses heavily upon the farmer. In order to gather in the fruits of the earth it is necessary to give the labourers good beer; during the last harvest it would have been impossible to have dispensed with it—the expence of this wholesome beverage is very great; no tax designed for government purposes presses with equal weight upon the farmer—should it be reduced one-half he would be greatly benefited.

It would increase the comforts of honest and industrious labourers. Perhaps no class is more deserving a respectful notice; on their efforts to a very great extent depend a supply for all classes of society; "The King himself is served by the field." By reducing this tax one-half, labourers may brew their beer at home, and enjoy themselves in the bosoms of their families, and have something to strengthen them to perform their daily labours. It would also have a tendency to check public house tipping, and thus be conducive to the morals of society. It would, I think, have a beneficial effect upon agriculture in general. That agriculture is in a languishing state none who are acquainted with it will attempt to deny. Many farmers within a very few years have been ruined; others have become insolvent, and but a few are to be found who have not suffered a great diminution of capital; owing to a very expensive harvest and declining prices for corn, numbers are depressed and filled with fearful forebodings respecting the final issue. Under such circumstances is it not highly desirable that government should afford every possible relief? That a reduction of half the duty on malt would benefit agriculture would appear by a great increase in the consumption of barley, which would require a greater quantity of land to produce a supply; as more land would be sown barley, less would be sown wheat, and thus create a small advance in the prices of all kinds of grain; that a small advance in the prices of corn is desirable—that it would be easily borne—and that it would be for the general good, few persons, I think, will attempt to deny.

It would be performing an act of justice towards a well-deserving class of society. Under the present circumstances I do not plead for the total repeal of the malt tax: malt liquor some consider a luxury, as well as necessary of life, and, consequently, a fit article for taxation; but, being a necessary of life, justice requires, when all other articles of consumption are reduced, a great reduction of this tax. It demands it for the consumer. Wages being greatly reduced, an exorbitant tax upon any one necessary of life, places it out of the reach of the consumer, or else he must have other necessaries at a far inferior

price ; thus mechanics and agricultural labourers, who take beer as a necessary of life, must have bread very cheap. Justice requires it on behalf of the producer. Owing to this heavy tax he suffers two ways—he cannot make so much of his barley on account of a limited consumption—he cannot make so much of his wheat because the consumer is obliged to give so much for beer. A reduction of half the malt tax would give general satisfaction. Many taxes have been reduced to relieve trade ; but a reduction of the malt tax would relieve all. If farmers received the greatest benefit it must be admitted that their circumstances require it. To reduce this tax would convince the agriculturist that government had his interest in view as well as that of other classes—this would tend to remove prejudice, and check those jealousies that have for some time existed, many supposing that a liberal government was more favourable to trade than to agriculture.

It would tend to remove a strong temptation that prevails to evade these duties, but as this is so clearly proved by the commissioners of excise inquiry, I shall not enlarge upon it. From the preceding observations, and others that might be made did the limits of your paper admit, I think it may be fairly inferred that a reduction of half the malt tax, would be a great benefit, and give general satisfaction. In reference to the second question—Whether the state of the revenue will admit of a reduction of half the duties on malt ? I beg to remark that in the report of the commissioners of excise inquiry, it is stated as probable “that a reduced duty would, by means of an increased consumption, yield as great revenue as that which is obtained from the present duty,” but “that there is no probability of a reduced duty being followed by such an increased consumption of malt as would prevent a loss to the revenue, so long as the importation of foreign barley is restricted.” From these extracts it appears that the opinion of the commissioners is, that in order to a reduction of these duties, the country must be inundated with foreign barley ; thus, instead of relieving the British farmer by a reduction of the malt tax, the benefit would be transferred to the foreigner. To this kind of reasoning I reply, in the first place, let the British grower of corn have a fair trial. If by a reduction of the malt duties a greater demand for barley should be created, and the prices obtain a small advance, it is what is necessary to save the farmer from ruin. But can it be maintained that the British isles are unable to produce a sufficient supply ? Let the candid reader look to the glutted state of the markets—the declining prices for all kinds of grain—the resources of Ireland—the large tracts of uncultivated land in this country—the skill and ingenuity of the British farmer, and then say, that if government has an opportunity of conferring a favour it must pass from the British grower of corn to foreigners. I am at a loss to understand the policy of attempting to remove the duties from foreign grain whilst it can be grown in such abundance and so cheap in this country, and employ such vast numbers in producing it ; and yet, articles of general consumption, even necessities of life, which cannot be produced in this country, are encumbered with heavy duties, without any attempt being made to remove or reduce them.

Again, the present corn laws are quite sufficient to prevent exorbitant prices. If, in consequence of a reduction of the malt duties there should be a better sale for barley, and a greater demand render it necessary to sow more barley and less wheat, and advance the prices of both, it will let in foreign corn, and in proportion as the price advances the duties will be reduced ; whilst the revenue would be benefitted.

Further, it is absolutely necessary that the present duties on malt should be paid into the revenue ? Supposing the amount to exceed four millions, is not this in times of peace far too much ? By reducing these duties one-half, there can, I think, be no doubt, owing to an increase of consumption, that three millions may be depended upon ; the agriculturist benefitted, and trade receive no injury. It may be asked, how is the one million and odd to be made up ? In reply, I ask, cannot government give up one million to the farmers ? Trade has been relieved by a reduction of the window and other taxes, and surely it is not too much to bestow one million to relieve agriculture, but by reducing the malt duties it would not only be relieving the farmers, but the country in general. Should a deficiency still be found, I would suggest the propriety of appointing commissioners to examine all sinecures, pensions, and salaries paid by government, that they may if possible, be reduced. Those land proprietors who have acted upon the principle of justice, have in many instances, reduced their rents from 20 to 30 per cent. Acting upon the same principle, is it not reasonable, owing to the reduced price of provisions, that a reduction should be effected in the pay of those who receive emoluments from government ? Should this plan be adopted the malt tax might be reduced one-half, and public credit maintained. In conclusion is it not desirable that petitions should be presented at the next session of parliament, for a reduction of half the duties on malt, without any alteration in the corn laws ? Yours, &c.

October 26.

C.

## RECEIPT FOR CURING SCAB AND DISEASE OF SHEEP.

TO THE FARMERS OF KENT, AND GRAZERS OF SHEEP.

Owing, in a great degree, to the very dry summers and shortness of food, many sheep in Romney Marsh, and other places in East Kent, were infected with the scab and other disorders.—Now, by dressing the fresh-brought-in sheep before putting them with the original flock, which is a general custom in other sheep counties at the fall of the year, would be the means of saving hundreds and thousands from inoculation. The dressing is not only used for the scab, but also for long-wooled sheep, as a remedy for killing the ticks and lice, which so often harbour in the wool during the winter months, making them poor and unkindly, and destroying a portion of that valuable staple commodity. The dressing kills all insects, nourishes and improves the wool, and if any disease exists which may not be perceivable at the moment, it will also eradicate that, and leave the sheep in a much more healthy state. If it was a general thing in this country, as in many others, to dress sheep annually, it would do away with much of the unpleasant feeling which now exists amongst neighbours, and be of great satisfaction to all owners of flocks. The dressing may be applied with effect, if done in dry weather, for the trifling sum of 6d per head, which will be three-fold recompensed in the wool alone.—I am, your humble servant,

A FRIEND TO WOOL AND MUTTON.

RECEIPT.—Ten gallons of tobacco liquid ; boil a quantity of green broom, chopped fine, in ten gallons of water three hours ; put in one pound of hellebore root, half of a pound of arsenic ; add to this ten gallons of broom liquid, to ten gallons of tobacco liquid ; put half a pound of oil of tar to the twenty gallons, which will be a sufficient quantity to dress an hundred sheep.

P.S.—The tobacco liquid may be bought at 1s per gallon, at most of the wholesale tobacconists in London ; and the preparation ready for use at Mr. Farmer's, of Ashford.

[The proceedings at the agricultural meetings recently held having had especial reference to the causes which occasion the present depressed condition of the agricultural interest, as well as to its remedies and to a consideration of the course which should be pursued in the ensuing session of parliament, we have again devoted more than the usual space allotted to such reports. As, however, it is of little use to be skilled in growing grain or rearing cattle unless the produce can be disposed of at a price which will afford a reasonable compensation for the investment of capital and a fair reward for labour, we trust our readers will not think we have erred in deviating somewhat from our usual plan.—We have many valuable communications upon our table which shall appear as early as possible.—ED. FARMER'S MAGAZINE.]

### YORKSHIRE AGRICULTURAL SOCIETY.

On Saturday, the 14th November, the Yorkshire Central Agricultural Association held their annual meeting, and at half-past two o'clock upwards of 120 gentlemen and influential farmers sat down to dinner, in the Merchant's-hall in that city.

The President of the society, E. S. Cayley, Esq., M.P., was in the chair; supported on his right by the Hon. W. Duncombe, M.P., G. L. Fox, Esq., Wm. Garforth, Esq., M. Staplyton, Esq., James Walker, Esq., Thomas Price, Esq., Hon. Octavius Duncombe and Robert Denison, Esq.; on his left by Sir E. M. Vavasour, P. B. Thompson, Esq., M.P., Hon. C. Longdale, Sir George Cayley, W. C. Harland, Esq., M.P., Henry Preston, Esq., and Mr. Alderman Smith. Amongst the gentlemen at the table on the right of the Chairman were George Lloyd, Esq., R. Bower, Esq., Thomas Barstow, Esq., George Hudson, Esq., Ed. Dixon, Esq., Rev. J. Overton, Hewley Graham, Esq., John Agar, Esq., Captain Ewbank, E. S. Copley, Esq., William Worsley, Esq., J. Dodsworth, Esq., John Roper, Esq., &c. At the table on the left were Colonel Croft, Dr. Wake, Mr. Sheriff Cattle, the Recorder of York, H. Darley, Esq., Charles Howard, Esq., Dr. Hey, Captain Waller, D'Oyley Saunders, Esq., Mr. Sheriff Hanson, Mr. S. Herbert, Mr. S. P. Wilks, the Rev. H. Chaloner, &c. The Vice-Presidents were Thomas Laycock, Esq., of Colton-lodge, and Thomas Hodgson, Esq., of York.

After the customary toasts,

The CHAIRMAN said the next that he had to propose was "Success to the Yorkshire Central Agricultural Association." He was exceedingly gratified to see so numerous an assembly all joining heart and hand in the same disposition—to obtain relief to the agricultural districts. It was impossible for any person, however short his acquaintance with the company, not to know that great diversity of political opinion existed among those around him, and he gloried in it, because the time was now come when it was necessary to be unanimous and united, to join with each other, Whig, Tory, or Radical, for the purpose of obtaining redress for the evils which surrounded them. (*Cheers.*) The agricultural question was not a party question; all were desirous of supporting the agricultural interest, all were aware of its paramount importance, and all were ready to drown secondary feelings, to unite at the same table, and each assist to put down every enemy, and emancipate the landed interest from its present degraded and fallen state. (*Cheers.*) The politics of the farmer were these—when he found that his produce would not sell at such a price as paid for

the labour, and met his rent, then ought he to raise his voice and contend for his rights; these were the true politics of the farmer, the true rights of an Englishman, when he felt oppressed, to offer up his prayers to the legislature for a redress of his grievances. It was true that they had petitioned the legislature, and that they had not been relieved, but he believed that that was not to be imputed to an unwillingness on the part of the legislature, but because they were not united in their prayers. (*Cheers.*) It was therefore necessary that there should be a nucleus, a central association in London or elsewhere; and he trusted they would not sit down content with what they had done, but endeavour to persuade other societies to join them, and thus form one solid compact body, remembering that "union is strength." (*Cheers.*) Two days ago there had been held elsewhere a great agricultural meeting, and Lord Chandos had summoned deputations from different parts of the country to it, to consider the best means to be pursued. He was happy to say that he had that day received intelligence from Aylsbury, and he could inform them that deputations from various counties met and deliberated. After much discussion it was proposed and carried, that a change of currency was the main cause of the distress; and that it would be desirable for agricultural associations to concentrate their forces, and form a central association in London. (*Cheers.*) He hailed these resolutions with satisfaction. It was necessary that an inquiry should be made into the cause of their distresses; this feeling began in Cambridgeshire, it was seconded by Suffolk, and followed by Kent, Buckingham, and Shropshire; all these were determined to call for an unfinching and thorough investigation into the cause of their present distress. (*Cheers.*) He had an opinion as to that cause, and believed that it was the state of the currency. After a lengthened discussion of the merits of our present currency, the worthy chairman, in conclusion, said, that he trusted there would be from this association some decisive expression of feeling, that they were determined to have an investigation into the causes of their distress. It was impossible for them to go on as they were—agriculture was on the brink of ruin; but he trusted there was spirit enough among the yeomanry of the country, not only to demand but command relief to their distress. (*Loud cheers.*)

The CHAIRMAN having proposed the health of his honourable colleague,

Mr. DUNCOMBE returned thanks. He said that the marked and enthusiastic manner in which his health had been received, was not owing to any merits of his own, but because he had discharged in a humble and faithful manner his duty as their representative. He believed he need not assure them that ever since he had had a seat in parliament, he had felt it to be no less his duty than his interest to promote especially the agricultural interest of the county. He would do nothing to disparage any of the other great interests, but because he considered and felt that the prosperity of the community at large depended on the support and prosperity of the farming and agricultural interest, he had ever given it his first attention. He need not say that since he had been returned for the North Riding, that large and influential agricultural district of this mighty county, with which he was connected by every tie, he had given his support, without reference to any party feeling, to all the measures which had been brought into parliament for ameliorating the condition and alleviating the burdens of the owners and occupiers of land. (*Loud cheers.*) He need not express his regret when he found that every measure which had been brought forward for the landed interest had been unavailing, and that the efforts of the farmers' friends in parliament had not been crowned with success. He knew that there was a wide field open for discussion,

but he would not go out of his way to introduce topics upon which great difference of opinion existed. The hon. member then took a glance at the various questions, affecting the agricultural interest, which were discussed in parliament during the last session. The first was that introduced by his hon. colleague (Mr. Cayley) for an inquiry into the currency; to this motion he gave his support, without considering that he pledged himself to all the views and opinions of his hon. colleague. He had not the same unqualified confidence in this measure, as being one which would lead to relief, but he was ever ready to say that a large number of the difficulties under which they now laboured, arose out of the contraction of the currency by the bill of 1819, and therefore it was due to all parties, equally to the public debtor and public creditor—it was due to all the interests of the country, that there should be instituted in parliament an inquiry, with a view to ascertain whether the present system was the best that could be established, or whether a material alteration would affect the productive classes of society. On that view, knowing the depreciation under which the agricultural interest laboured, and being an independent member of parliament, he gave the resolution his support. The motion, they were aware, was negatived by a large majority. Whether his hon. friend intended to bring forward again this motion, he knew not; but he considered that in the present diversity of sentiment which prevailed upon it, he did not think he should be justified in holding out any sanguine hopes that the opinion of the house was likely to be reversed; therefore it behoved them to consider whether or not some other means of relief could not be obtained. (*Cheers.*) Next, his noble friend (Lord Chandos) brought forward his motion for the repeal of the malt tax, and this also met with his support. He had supported the repeal of the malt tax on a former occasion, and, notwithstanding the able arguments made in the speech of Sir Robert Peel against the motion, although he was anxious to give every support to that right hon. baronet's government, yet, not considering his arguments sufficient to warrant his changing his opinion, he again gave his vote in favour of the repeal of the malt tax. He was of opinion that the repeal of the malt tax would be the greatest boon which could be conferred on the agricultural interest. It would be of essential relief to the farming interest, and would confer a benefit on all the productive and labouring classes of the community, who would then be enabled to enjoy a wholesome English beverage, instead of frequenting beer shops, where they contracted habits fatal to industry. But it was said that this tax produced 5,000,000*l.*, and where was to be found a substitute? As he was not Chancellor of the Exchequer he did not feel it to be his duty to find one; but it was the duty of the Chancellor of the Exchequer, when he found the meritorious classes labouring under excessive pressure of taxation, to review all the taxes of the country, to endeavour to remit the public burdens, and distribute them more equally among all classes. (*Cheers.*) He was convinced that the repeal of this tax would be a moral, social, and political benefit. (*Cheers.*) The hon. member next alluded to the motion of the Marquis of Chandos, on the 25th of May, for an immediate removal of the burdens which press upon the land in the shape of general and local taxation; and the amendment of Lord John Russell, which was adopted, that 110,000*l.* should be voted from the Consolidated Fund, and charged to the county-rate, for defraying the charge on the conveyance of transports and prosecution of felons. This was all the relief which the supporters of the amendment intended to the farmers. He contended it was a mere drop in the ocean, and that it was absurd to suppose that such a relief could raise the agricultural and farming interest to a prosperous state. (*Applause.*) They were aware that Sir Robert Peel, whilst Prime Minister of this country, proposed a plan for the commutation of tithes, but his premature secession from office caused that to be abandoned as a government measure, and nothing had since been brought forward on the subject. He trusted, however, that soon it would be again intro-

duced, as he considered it would be a benefit to the agricultural interest, if proposed on a just, equitable, and honourable principle. (*Cheers.*) He next dilated upon the necessity of petitioning parliament, and of a unanimity in their prayer, and declared his readiness to promote in any way any petition from the Yorkshire Central Agricultural Association. Before he concluded, he begged to observe that more societies were rising up, and in the justice of their cause, notwithstanding that clouds now hung over them, he saw a dawn in the horizon, which he trusted was the harbinger of brighter days. In conclusion, he expressed his attachment to the farming interest of the country; and begged to assure the meeting that they would always find him, at all times, whether in prosperity or adversity, in public or in private station, proud to be enrolled among them as their advocate, their labourer, and their friend.

During the evening petitions to the two houses of parliament, setting forth the distressed state of agriculture, and praying for relief, were very numerous signed.

### SHROPSHIRE CENTRAL AGRICULTURAL SOCIETY.

On Saturday, 14th Nov., the members of the Central and General Agricultural Association for Shropshire held their anniversary dinner at the Lion Inn, Shrewsbury. This dinner excited much attention amongst the landed interest, in consequence of the avowed intention of the Earl of Darlington to state his opinion as to the course he would advise the agriculturists to pursue in the ensuing session of Parliament relative to the currency. The attendance was in consequence very great, and more numerous than on any former occasion.

The Earl of Darlington, as President of the Society, took the chair, and the Hon. R. H. Clive, M.P., and W. O. Gore, Esq., M.P., officiated as Vice-Presidents. Near the chairman sat R. A. Slaney, Esq., late M.P. for Shrewsbury; Colonel Wingfield, J. A. Lloyd, Esq., Major Bayley, John Bather, Esq.; Charles Emery, Esq.; the Rev. Mr. Drury; W. Lawley, Esq., W. E. Jeffreys, Esq.; John Minor, Esq.; John Edwards, Esq., &c., &c.

After the customary toasts,

The noble CHAIRMAN said, that, as President of their Association, he felt it his duty to state his opinions as to the aspect of the times with respect to agriculture. (*Cheers.*) He was glad to see assembled together so large a body of landed proprietors and occupiers, each taking a lively interest in what concerned the well-being of all; but still in so mixed an assembly there must of necessity be a variety of opinions as to the cause of the distress under which agriculture now laboured. It was right, however, to hear the opinions of all before they attempted to apply a remedy. (*Hear.*) As to the extent of the distress, there was very little difference of opinion among them, but as to the cause and remedy there was much. Did he not think that Parliament had the power of in some degree relieving the distress of the farmer he should not now address them. He disagreed with those who asserted that the agriculturist must alone look for relief from his present situation by an improved cultivation of the land, and by an adjustment of rent between himself and the landlord. With respect to this latter, indeed, it was a matter of private arrangement between the parties, and not, therefore, a subject which would admit of much discussion in public. He appeared before them as a Member of Parliament, and first let him ask what it was that the farmers most complained of? He believed they would all agree that it was the "low prices of produce." (*Hear, hear.*) And, that being the evil, in order to remedy it they must

have recourse either to some mode of raising the prices, or reducing the costs of production. (*Cheers.*) He would begin by a consideration of the latter remedy. The first and most material item perhaps in the farmers' expenses was rent. With respect to those rents which were enhanced during the war, they had, generally speaking, been reduced from 30 to 40 per cent., though certainly this was not the case as regarded all. If the landlord, however, were to be called upon continually to reduce his rents he would shortly have none left at all. But he believed he should be able to show them that if rent were remitted altogether they would not be in so good a condition, owing to the present very low price of produce, as they formerly were. This might appear a bold assertion, but he would quote in proof of it a statement made by a man who, if he excepted Mr. Coke, knew perhaps as much of agriculture as any man in the kingdom; he alluded to Lord Western. The chairman here read a statement made by Lord Western to the Chelmsford Agricultural Society in June last, in which he supposed a farm of one hundred acres of well-cultivated arable land on the four-course system, which, during the war, was 35s per acre, making 175l for the farm. The price of wheat from 1797 to 1819 averaged 80s per qr, and the fifteen years preceding 1819 it averaged 95s per qr, whilst in the fifteen years subsequent the average was 55s. He took it, therefore, that wheat had fallen 30s per qr, and barley, peas, and beans 20s per qr, and the diminution of price for one year's produce of the farm would stand as follow:—

|                         |           |
|-------------------------|-----------|
| Wheat .....             | £131 15 0 |
| Barley .....            | 125 0 0   |
| Beans and Peas .....    | 42 0 0    |
| Clover .....            | 15 0 0    |
| Turnips and Tares ..... | 12 0 0    |
|                         | <hr/>     |
|                         | 325 15 0  |

the total diminution in the prices of produce, as compared with the war prices. It was quite evident, therefore, that the tenant must not only have his farm rent free, but must have 150l. presented him into the bargain, in order to place him on the same footing as prior to 1819. (*Loud cries of "Hear, hear."*) So much for rent. Next came tradesmen's bills, machinery, and implements. There had been very little diminution since the war in these, nor did he see much prospect of their being further reduced. With respect to the costs of labour he had no doubt but that the Poor Law Amendment Bill would ultimately prove very beneficial in this respect to the farmer, but it would of course be gradual. The main feature of the Bill was to make the labourers support themselves and families by their own industry, but in order to do that their wages must not be diminished, but rather increased. (*Hear.*) The charges he had already mentioned did not come under the control of the Legislature. He now came to the consideration of other burthens, such as county rates, highway rates, poor rates, and tithes. Of the latter he would only say that he was anxious for a commutation; but still the benefit, in a pecuniary point of view, to the farmer would not be very considerable, for the clergyman must still have his stipend. There was every reason to believe that Government would effect such an alteration in county rates as to give some trifling benefit to the farmer; it could not be much, for the county rate, throughout the kingdom, did not average more than 4d. in the pound on rent, and if all were taken off it would be but as a drop in the ocean. (*Hear.*) The highway rate certainly pressed very heavily, and he believed the farmer would find himself much benefited by be-

ing relieved from a greater part of statute duty. (*Hear, hear.*) As to poor rates, he thought it would be far better to make it a State tax, rather than a local one; but there was no hope of such an alteration being effected, unless it were introduced by Government, and he did not see much prospect of that being done. It seemed, then, that it was next to hopeless to think of relief by a diminution of the cost of production, and the only other remedy was a raise in prices. It was said by some that the fall in prices was caused by the sudden transition from war to peace. That certainly might have accounted for it in the first year of peace; but not in the twenty-first. (*Hear, hear.*) The war virtually ended in 1814, The years 1817 and 1818 were years of as great prosperity as the farmer perhaps ever knew, or could expect to know. In 1819, what was called Peel's Bill, was passed, having for its object the curtailment of the currency. Immediately prices fell, and continued to fall, until 1822, at which period the farmer suffered more than at any former or subsequent time. (*Hear, hear.*) The distress, indeed, was universal, it rang in the ears of Parliament, and the Government at length took up the subject, and by a forced issue of four millions from the bank, quickened the circulation. All prices immediately rose, and, in 1824 and 1825, agriculture was flourishing. At the end of the latter year, however, came the panic, which arose in a great measure from overtrading, causing the exchanges to be against us. Upon this the bank took fright, and suddenly withdrew their issues to the extent of three millions, and then came the panic. After this they went up and down till the year 1830, with no great complaint from the agriculturists, but ever since that time things have been getting much worse, the reason of which was, that the latter part of Peel's Bill, prohibiting the issue of country bank notes, took effect in 1829, and produced the effects now unhappily so apparent to all. He might be wrong in his opinion, but what he had stated were facts, and by which they might learn that, whenever money was plentiful, prices were good, and when it was contracted, prices were low. He would take that opportunity of correcting a mis-statement which had been made in both the Shrewsbury papers, with reference to what he said at Bridgenorth. He was reported to have said, that he wished the currency to be placed on the same footing as it was in 1815; that was, an issue of Bank notes without any responsibility. Now, no person could deprecate that system more than himself. What he wanted was, that there should be an alteration in the standard, instead of being compelled to abide by a gold standard only, and that too at a fixed and arbitrary price, even though it should end in utter ruin. (*Cheers.*) He wanted an alteration of the standard from gold to silver, which he believed would be productive of the best results. He would listen to no other basis for our currency than a metallic one. It was well known that the Bank of England regulated all the money transactions of this kingdom. How then was it situated? The greater quantity of notes they issued, the larger their profits, but the greater also their peril, because they had to regulate the foreign exchanges. So long as the exchange was in our favour all was right, but let the case be reversed and the Bank would be called to pay its liabilities in gold, and how was that possible, seeing that they had but six millions to meet eighteen millions? (*Hear, hear.*) It was therefore absurd to say that the public might obtain gold for their notes at the Bank. Suppose at quarter day, when the dividends had to be paid by the Bank, amounting to about eight millions, the parties receiving them were to

demand them in gold, what would be the consequence? The Bank must stop payment. Every foreign country had a silver standard; we, alone, were determined to have a gold one, and to super-add the absurdity of confining it to the fixed price of 3*l.* 17*s.* 10½*d.*, an ounce. Suppose a war were to break out at Paris, (which was only a forty-eight hours' journey from this country), and gold should be suddenly in demand there, occasioning it to fetch 4*l.* per oz., was it to be supposed that the gold would not leave this country? It certainly would, for there was nothing to prevent it, and this would compel us to alter our system. (*Hear.*) This was one reason why we should have a silver standard; another was, that experience proved it was not liable to the fluctuations incident to gold. But some might ask how it was possible to meet all our engagements and paper credits with silver? The reply was, that a silver standard would not drive away the gold, but would rather assist in retaining it, and when wanted for any particular purposes it could be had. These, then, were some of the reasons why he thought a change in the currency desirable. An alteration in 1819 occasioned the fall of prices, and they must now have another alteration to effect a rise in prices. He saw no other way open for substantial relief from the difficulties which were now pressing so heavily upon them. He had thus stated his opinions freely; he was aware they differed from those of others, but he could assure them that they were the result of much thought and attention, and holding the situation he did, he felt himself bound to state them. (*Hear.*) There was one other point to which he wished to allude before he sat down. The principal distress was among the small farmers—men who had but little capital, and who were often compelled to take their produce to market at the most unseasonable time of the year. Now this of course operated most injuriously. The time at which there was the greatest glut of corn was between harvest and Christmas, and he thought it would be a great relief to the small farmer if the landlord would ascertain the amount he wanted to raise by taking his stock into the market, and instead of suffering him to do so, place so much to his credit, until a suitable season, when he could take his grain to market, and obtain a better price. (*Cheers.*) He threw this out as a hint for the consideration of parties, as a means of affording some temporary relief to those who were suffering most. (*Cheers.*) He thanked them for the attention they had paid him, and should now be glad to hear the opinions of other gentlemen. His lordship sat down amid loud cheers.

—BICKERTON, Esq., said he most cordially agreed in some of the opinions expressed by his lordship, but differed in others. At the last meeting his lordship told them they must wait and see what parliament would do for them. Now, they had waited with a patience which would have done honour to Job himself (*laughter*), but nothing had been done. (*Hear, hear.*) His lordship now told them he saw no hope of relief but in a change of the currency. That, however, he thought, was a question not exclusively for the agriculturist, but which interested the community at large. (*Hear, hear.*) He (Mr. Bickerton) was once of the same opinion, but it had been much shaken by, among other things, the perusal of a paper he held in his hand drawn up by Sir G. Shugburgh and published by the Royal Society, and which gave the price of wheat from the year 1050 down to a late period, and also an account of the quantity of bank notes from the first establishment of the bank; and on comparing these he by no means found the currency theory made out. It also gave an account of the gradual growth of the national debt from the year 1334, when it was 60,000*l.*, to the year 1815, when it was

1,121 millions. In the year 1830 it was 771 millions. His lordship had said that he saw no mode of reducing the cost of production; not did he (Mr. B.) so long as the interest of this enormous debt had to be paid out of the productive industry of the country. (*Hear, hear.*) This it was which caused such heavy taxes and duties to be laid upon every thing which entered into a man's consumption, and thus increased the cost of producing agricultural produce. Labour was four times the price it was in their fathers' days in consequence of the heavy taxes the labourers had to pay, and yet he did not complain that they had any too much. (*Hear.*) In fact, he believed that they were both clothed and fed worse than they used to be. (*Hear.*) At the present time there were more depressed in agriculture than any other branch of industry. He was fully convinced that the whole system of taxation must be revised before agriculture could be placed on its proper basis. (*Loud applause.*) His lordship had stated that rent was the first payment a farmer had to make. In his (Mr. B.'s) opinion it ought to be the last (*laughter*); and if so, then he was quite sure there would not be one shilling rent left for the cold heavy lands. (*Loud cries of "hear," and cheers.*) He considered that the farmers had been thrown overboard by all parties in parliament. Sir Robert Peel, who was a Tory, inveighed against the repeal of the malt tax in a speech which had been considered unanswerable. Lord Stanley, who was neither Whig nor Tory, had said they must not look to parliament at all for relief, but that the landlord and tenant must settle the matter between them. He should very much like to know, however, whether he imagined that the farmers would cultivate the land out of pure patriotism. (*Cries of "hear," and laughter.*) Then, again, the government, which was composed of Whigs, said they could do nothing more for them, except some paltry reductions in the county rate. A great boast had been made of the reduction of poor-rates. For his part he wondered they were so high, seeing that provisions were so low. (*Hear, hear.*) Mr. Bickerton concluded by complaining of the broken promises of members of parliament on the question of the malt tax, which complaints were loudly re-echoed by the assembly.

JOHN BATHER, Esq., said they had had a very dry argument, and he proposed, therefore, "The health of their noble chairman," and when that was done he should have the pleasure of telling his lordship how much he differed from him. (*Loud laughter and cheers.*)

The toast was drunk with three times three, and Lord DARLINGTON very briefly returned thanks.

Mr. BATHER then continued—They had heard the opinion of a nobleman who would eventually be one of the largest landowners in the county, and also the opinions of a practical farmer, and they would now allow him, who had an equal interest as landlord and tenant, to state the result of his studies on this vital question. They had often said "Let us see what relief we can get from parliament, and try to get the repeal of this tax and that tax, and then see what adjustment ought to take place as regards the relative situation of landlord and tenant." The time, however, was now come when the bull must be taken by the horns. (*Cheers.*) The time was come when, as honest men, they must alter the relative condition of landlord and tenant. (*Loud applause.*) The landlord must understand upon what ground his right to rent rests, and ascertain the broad principles upon which it must be adjusted. The landlord was a capitalist of land, and the farmer was a capitalist of money, skill, and labour. The landlord must, therefore, give the farmer the occupancy of so much land as would repay him interest for the outlay of his money, skill, and labour, or he would soon have the land to cultivate himself, and he would then speedily find it out. (*Hear.*) He admitted the rent of the land was a matter of private arrangement; but then they must refer to some broad principle by which to make that arrangement. There might be lands so poor as not to repay even the cost of cultivation; and what right had the owner, under such circumstances, to look for benefit from it? He is the owner of something of no value, and it is his misfortune. (*Hear, hear.*) He did not mean to say that both land-

lord and tenant might not go with effect to parliament; but then let everything which can be done between them be done first. (*Hear, hear.*) Let the landlords who are members of parliament go with clean and honourable hands—let them be enabled to say “We come not here, having wrung the last shilling from our tenants, to ask you to give them another shilling, that we may wring that from them also” (*loud cheers*); but let them say “We come here to ask relief, after having reduced our establishments and curtailed our luxuries, and after having done every thing, in short, which honourable men can do, for the sake of our tenants.” Let them do this, and no sneering merchant would then say of them—“Look here at these stranded Leviathans, who come and ask us to take them in tow;” but they would look upon them as men of honour, and entitled to consideration. (*Cheers.*) There was a courage much superior to that which enabled a man to wield a sword or level a pistol, and that was moral courage, which men much lacked. The landed proprietor, who found he could not now live as he used in his mansion, instead of going to a smaller dwelling, and foregoing some at least of his luxuries, in order to accommodate himself to altered circumstances—instead of adopting this rational course of proceeding, he must fly to the Continent in order to make his income go farther than it would here. (*Hear.*) The same might be said of the farmer, who now seems ashamed to put his hand to plough; his daughter’s fingers are too taper ever to become acquainted with the milk-pail or the cheese-vat, and his son would scarcely be seen leading the horse to the blacksmith to be shod: of course they find they cannot do this, and away they go to Canada, where they soon discover that they have to labour hard in a comparative wilderness. (*Cheers.*) The fact was, both landlord and tenant must make up their minds to return to the habits of their ancestors, one of which, let him remind them, was to keep the labourers in the farm houses, which had now unhappily grown into disuse, and produced so many evils. (*Hear, hear.*) With respect to the currency, he agreed to a certain extent, with the noble lord, that the change which took place in 1819 was the proximate cause of the distress, but that was no reason why, after all this lapse of time, when things had adjusted themselves to the new standard, they should go back. As to his lordship’s particular plan of alteration, he might call it “silver standard,” or whatever name he pleased, but it was simply and truly depreciating the currency. (*Hear, hear.*) And was not money, he asked, in great plenty? If it were not so, depend upon it Three per Cent. Consols would never be at 91. He did not agree with the last speaker that the farmers had been thrown overboard. The members for this county had done their duty like wise, discreet, and honest men. (*Cheers.*) He advised them not again to go for a repeal of the malt tax, since men of all grades of opinions, Whig and Tory, had thought proper not to grant its repeal.

ORMSEY GORE, Esq., M.P., next addressed them, and said he had voted with his lordship in the chair on the questions of the repeal of the malt tax and the currency. (*Cheers.*) He was far from attaching so much importance, however, to the repeal of the malt tax as some gentlemen did, and it was right they should know there were many very experienced farmers who were against it. He had voted for a committee to inquire into the currency question, and he should do so again, though he, too, must confess he did not understand the subject so fully as to enable him to decide either for or against the adoption of a silver standard. He must say he thought highly of the plan for converting the poor rates into a state tax, and he believed it would greatly benefit the agricultural interest, nor did he see why funded property should be exempt from this tax. (*Cheers.*) In speaking of this subject, of making the poor rates a national tax, to Lord Melbourne, in the course of an interview which he (Major Gore) had with his lordship a little while ago, he allowed that the plan was a good one, but alluded to the great difficulty there would be in carrying it into operation. He

mentioned this to show that Lord Melbourne was alive to the subject. (*Cheers.*) The hon. gentleman concluded by strongly recommending the formation of a board or committee of agriculture in London, to watch over and promote the interests of the farmer.

R. A. SLANEY, Esq. (late M.P.) next addressed them. He commenced by congratulating them on the excellent temper and spirit with which the discussion had been maintained, and also that some of the false causes of their distress, which were loudly talked of last year, were not now mentioned. He was friendly to a commutation of tithe, and believed it would be accomplished next year, for there now seemed but little difference between Whig and Tory respecting it. He highly approved of the new Poor Law Bill, which was working extremely well for all parties, the labourers included, and which they themselves now confessed. He concluded by hoping they would soon have a board of agriculture in London to watch over and protect their interests.

ESSEX.—A ploughing match between six *crack* men, came off upon the Oak Farm, Woodham Walter, on Saturday week. The following three—Bannister, in the employ of Mr. Barrett, of Hazeleigh Hall; Webb, ploughman to Mr. John Sanders, of Purleigh; and South, in the service of Mr. Ling, of Hatfield, entered the field against—Hawkes, ploughman to Mr. Wilson, of Althorne; and John Bones and Wm. Stebbing, both in the employ of C. Comyns Parker, Esq. of Woodham, Mortimer Place. The judges, Mr. Bewers, of Sandon, and Mr. Robert Babbs, of Tillingham, decided in favour of the first-named three, and particularly noticed the superiority of Bannister’s work. The match was got up, we understand, by two gentlemen patrons of the plough, each backing his three men for three sovs.

HIGHLAND ESTATES.—A striking instance of the increased value of Highland pastoral districts occurred last week in the sale of the Cromarty lands in Ross-shire. The Fanich lot, which rents at 180*l* per annum, sold for 6,550*l*, being about thirty-seven year’s purchase. The Lochroom lot sold for 9,200*l*, being a thirty-four years’ purchase. The sale took place on Wednesday, in Edinburgh, and was pretty sharply contested. The upset price of the two was 13,150*l*; it rose 2,600*l* higher, when they were knocked down, the two lots at 15,756*l*, to Murdo Mackenzie, Esq., late of Ardross, now of Dundonnell. The principal cause of this high price (which a very few years ago would have been considered ruinous in the Highlands) is undoubtedly the spirit and intelligence with which sheep-farming is prosecuted in the north, and the present prosperous state of the country, particularly of that branch of our national trade. The improved means of communication, the excellent roads which traverse the country, and the steam-boats which approach its remotest shores, have also, though not particularly applicable to the case in question, contributed generally to produce these favourable results. Before the opening of the Caledonian Canal, the Glengarry property did not produce above 1,000*l* a-year, and it now approaches to 8,000*l*. The property of Redcastle, in Ross-shire, in 1790, sold for 25,000*l*; in 1824 it was resold for 135,000*l*! Instances of a similar kind might be multiplied in scores. The present system of sheep-farming was introduced, roads were made, and immediately a change was effected. Trade and agriculture began to revive from their languishing condition; the plough was driven into many a new soil; lakes, streams, and bays, were well finished for the southern markets, and belts of planting began to encircle the hill-sides. At the present moment, we believe, many Highland proprietors derive a greater revenue from their moors alone, for grouse shooting, than their whole rental amounted to “sixty years since.”—*Inverness Courier*.

## BREEDING FOR THE TURF, THE FIELD, AND THE ROAD.

Notwithstanding the splendid animals which constantly appear on our race-course, I feel an unqualified conviction that breeding for the turf has never yet been pursued upon a correct system of philosophy, or rather, perhaps I ought to say, upon the true principles of physiology; and that, consequently, there is much yet to learn upon this highly interesting and very important subject. In mentioning *Breeding for the Turf*, it will easily be perceived that I mean it to be understood as the concise aggregate for the saddle horse; for, although in the mode of going, and even in form, a difference is clearly perceptible, yet the courser, the hunter, the troop horse, and the hack, form merely so many shades, or trifling ramifications, of the horse, and a parity of reasoning will apply to each. I am well aware of the difficulty of arriving at conclusions mathematically correct upon the subject which it is here proposed to discuss, however plausible our system may appear upon paper; nor have we indeed any right to expect such a consummation, since experience abundantly proves, that our limited faculties are inadequate to the task of unravelling the mysterious operations of nature. Yet, such a consideration ought by no means to deter us from investigation; perseverance, directed by acute perception and good sense, has frequently accomplished what had been regarded as impossible of attainment; and, if our faculties be limited, as no doubt they are, the fact itself impresses indelible conviction on the mind that we are utterly unconscious of the boundary to which they extend, and that very circumstance ought to operate as a stimulus to our industry.

It may, and no doubt will, appear a startling doctrine to the old turfite, or breeder for the turf, to assert that the correct system of breeding is not understood; and he will immediately point to the Godolphin Arabian, (or rather to his stock) to Eclipse, to Childers, to Shark, to Sir Peter Teazle, to Smolensko,\* and many other remarkable specimens or examples, as the most positive and silencing contradictions to our audacious and insulting presumption: his countenance would assume a bitter sneer, a sardonic grin of contempt, and he would most likely not only decline further controversy, but set us down in his own mind as well qualified for a lunatic asylum. But we are not to be thus driven from our purpose; where truth seems to lead the way, we will follow, in defiance of the sneers of the unreflecting, the scoffs of presumptuous, unlettered, and dogmatic ignorance; and if we attain not to perfection, if we reach not the very apex of the science

which we are endeavouring to cultivate, we shall scarcely fail to arrive at interesting and satisfactory conclusions, which will most amply repay the trouble of investigation.

Although I have admitted our ignorance as to the abstruse, or rather inscrutable, operations of nature, yet it cannot be denied that the indefatigable perseverance of the human mind has removed the screen from much that would otherwise have never been discovered and consequently not understood, and formed a basis to the present inquiry at once solid, satisfactory and immutable. In this case, then, it will easily be perceived that from a proper foundation upon which to erect our edifice, we must look to those alterations or improvements which have been accomplished where nature has been judiciously assisted by art, or rather by human genius. Pigeons, as the fanciers of these birds will tell you, can be bred to a feather; or, in other words, they can be made to assume a variety of sizes, a variety of forms, and a variety of colours; and indeed so well understood is the system of breeding pigeons, that the form, size, colour, and feather can be anticipated with tolerable accuracy. We are presented with another striking example of the influence which is exercised upon nature in the endless varieties of the dog tribe which are incessantly offering themselves to our observation. There can be no question that the varieties of the dog, in a state of nature, were very few, and such merely as resulted from the effect of climate, nor have I the least doubt, that the dog, in a state of nature, at the present day, is precisely similar to his progenitor two thousand years ago: but if we contemplate our present race of what, for the sake of a better expression, I may call our domestic dogs, we shall find, that, while we can classify some dozens or scores of admitted and well known varieties, there still remains a countless multitude, differing from each other, but yet not susceptible of specific arrangement: or at least, which have not been admitted to the distinction of acknowledged classification.

Observations similar to the above are equally applicable to the hog tribe. It is true, we can easily enough trace in the form and features of our domestic hogs, the original progenitor, either in the wild animal of Europe, or the fiercer and smaller hog of the East, or in a mixture of the two: yet the endless variety of our swine impressively demonstrates the accommodating pliability of nature to the advantage, the wishes, or the caprice of man.

Pursuing this train of reasoning, we instance that indispensable creature, the sheep, as another incontestible proof of the progress of improvement, where the operations of nature have been directed and assisted by human genius. The wild sheep of Africa and the East can scarcely be recognized as the source whence have sprung the present highly improved varieties. On this subject, it would

\* One word, however, *en passant*: in these cases, the circumstances of success have been purely accidental, and have been, by no means, the result of solid judgment, founded upon the true principles of physiology: more of this anon.

amount to a species of semi-treason to omit the name of Bakewell, to whom we are indebted for the most beautiful and the most valuable sheep in the world. This gentleman (when living) resided at the small village of Dishley, two miles from Loughborough, Leicestershire; and by unwearied perseverance, sound judgment, and at the expense of a moderate fortune, succeeded in producing that beautiful animal of the tribe under consideration, known by the name of the Leicestershire sheep. By crossing the Charnwood Forest sheep with the Lincolnshire breed: that is, by repeated crosses, he produced the beautiful snake-headed form, a large, and comparatively fine, fleece, and more flesh upon the same weight of bone than had ever yet been seen. It should be mentioned, however, that his attention was directed also to the improvement of horned cattle, draught horses, and farming stock in general.

The effect of human cultivation is remarkably perceptible in horned cattle; and indeed observations similar to the preceding may be applied to every animal, which man has taken under his protection and rendered domestic. Nor need we stop here: since, if we contemplate the vegetable kingdom, we may reasonably enough be astonished, as the vast improvements effected by human genius directing and assisting the operations of yielding and beneficent nature. If it has never yet been ascertained how far improvement may be carried, (and in all probability this is a point which never can be ascertained with precision) sufficient has been accomplished to stimulate to further exertions those who feel an interest in conferring benefits on mankind, and who have the means of carrying their laudable intentions into execution.

The preceding observations appeared necessary for the elucidation of the object under consideration, and particularly to show the complying disposition of nature, and that the most astonishing results may be produced when her operations are assisted (not outraged) by the energies of human genius, or what may be called the homogeneous influence of art. In regard to the animals we have enumerated, and which, under human cultivation, have experienced so great a change, inasmuch as their structure or organization was less complex than that of the horse, less subject to disease, and their domestication less at variance with simple nature, the changes that were wrought in them were accomplished with much less difficulty than similar results can be obtained in the animal peculiarly under our consideration.

It has long been the practice of those who breed for the turf to choose animals for this purpose of a particular family; or what, in the phraseology of the school, would be called *blood*; that is, the blood of a certain favourite family: without that attention to form which is indispensable to improvement or perfection. Thus, if a horse happen to be

successful on the turf—if he happen to win the St. Leger for instance, he becomes a favorite stallion; and the leading principles of breeding *may* be thus superseded: I say *may*, as it by no means follows that such will be the case, since it will frequently be found, on examination, that these successful horses possess superior animal organization; in fact, this *must* be the case, or they could not win; and therefore, it must be admitted, the breeders were not in the wrong (supposing the horse was not diseased) though they could give no other reason for their conduct than that the horse was a successful racer. Whenever a horse becomes pre-eminently distinguished as a racer, his superiority is unreflectingly attributed to his *blood*, instead of his *form*. For my own part, were I a breeder, my attention would be directed to the form and quality of the animal: if I found his form consistent with the principles of power and speed, that his tendon was large and well defined, his joints large, that his bone, upon the touch, gave the impress or idea of ivory, that his feet were well formed, his eye full and clear, his breathing free and noiseless; in fact, if I felt satisfied with his form, texture, and soundness, I should scarcely think it necessary to inquire concerning his *blood*, that is, to ask whence he sprung,—I should feel no anxiety to trace his pedigree, though I might ultimately find, that he united the blood of the Godolphin and the Darley Arabians. Once more, however, I must observe, that what is called the best blood in the country will be uniformly found to exhibit the finest forms; and consequently the animal organization and texture demonstrate what is generally termed *blood*. But if a horse or a mare presented the finest possible form, with bone and tendon of the best quality, I would not breed from either the one or the other, unless free from blemish; that is, free from any blemish that would be likely to be communicated from the parent to the offspring. The strong sympathy which operates on the foetus from the mind of the parent is demonstrated in a countless variety of instances, to say nothing of the doctrine which Darwin has propagated on the subject, and which, however romantic and fanciful it may appear at the first blush, will be found, on investigation, physiologically correct: how, for instance, would the kid or the fawn be aware, in the earliest period of its existence, that the lion and the tiger were its unrelenting enemies, if the intelligence had not been previously communicated? But such is the case, as they (instinctively, as it is generally expressed) fly from their enemies the first moment they behold them, or even (by means of their olfactory organs) perceive their approach. Similar observations will apply to the mouse and the cat, the rat and the weasel, the pigeon and the hawk; and indeed the most casual observer, if he reflect for one moment upon the subject, will be abundantly convinced of the incontestible truth of the doctrine of what I may be al-

lowed to call sympathetic communication. It is true, we are unacquainted with the mode in which the information is thus mysteriously and wonderfully transmitted, but the fact is nevertheless incontrovertible; and therefore, since the *modus operandi* is placed beyond the reach of human investigation, we ought to rest satisfied with the result, which we see demonstrated, in numberless instances around us. Now, since we see the sympathetic operations of the cerebral organs thus transmitted from parents to offspring, how much more likely is any defect or disease of the animal organization to descend to the progeny? and how careful therefore ought we to be in making our selection, that the sire and dam should be as perfect as possible.

In regard to the horse, a sire or dam may be blemished on the knee from jumping a wall or some such circumstance, and such blemish, as far as relates to breeding, would amount to nothing; but, if the said blemish was caused by a fall, arising from malformation (from an upright shoulder, for instance), the produce of such an animal would be very likely indeed to present a similar defect.

If we select one hundred horses which have finished their racing career, we shall find ninety at least, on an average, with faulty fore legs; and indeed diseases of the fore legs generally appear before they have left the turf. The hind legs are not so liable to give way or become diseased as the fore legs, in my opinion for the following reason:—in galloping, the whole weight of the animal is forcibly thrown on the fore legs every stride or stroke; and as the racer is trained to go as close to the ground as possible before (to become a *daisy-cutter*), the shock must be very considerable, very great when the ground happens to be hard; and therefore the injury that must consequently ensue where the bone and tendon have not received half their development may be conceived perhaps, but no form of words can image it impressively or correctly on the mind. In speaking of the fore legs, I intend to be understood as including the fore feet also, since it is the delicate and complex mechanism of the foot that generally sustains the most serious injury. The celebrated Buckle (now no more) when called upon to ride a horse with which he was not acquainted, uniformly examined his fore feet, and if he felt himself satisfied, mounted without hesitation. When anything is amiss forward, it will be detected by an experienced eye, though it will frequently be found very difficult, if not impossible, to state the precise nature of it, or the exact spot where it is situated.

For reasons already given, it will be easily perceived that the hind legs are less liable to injury or disease than the fore legs; yet, when it is considered that an animal which does not attain its maturity till the age of seven, is forced to the severest exertion when, and frequently before, it has attained its second year, it is by no means surprising that splents,

curbs, spavins, and capped hocks should make their appearance. In the first instance, each of these will generally be found to have originated from overstrained exertion; and if the produce of animals thus affected do not present any thing of the kind in the early period of their existence, they generally inherit a predisposition or susceptibility for their easy reception, and they seldom fail to make their appearance on the most trifling occasion. Curbs will be found to appear more frequently, where the animal presents that form of the leg and thigh which gives to the hock a more angular appearance than usual.

As to *frushes* or *thrushes*—choose which name you will, since the terms are used indiscriminately—if the foot be well formed (as round as possible), I think but little of them; I have found them generally to arise from filth and inattention; and I have also found that they more frequently make their appearance in the feet of greedy-feeding horses, than those of a contrary description. Yet here again we must admit that, as like produces like, so the stock of greedy-feeding horses is very likely indeed to receive or inherit a similar disposition. Frushes would appear, according to my notion, to be the overflowings of the juices, produced by too much food, which the ordinary channels of nature are unable to carry off. Greedy-feeding horses are liable to scurf and scab in the hollow of the pasterns, arising, I apprehend, from the same cause; but I would not refuse a greedy-feeder, but rather prefer a horse of this description, since frushes will seldom make their appearance where proper attention is paid to the animal. Delicate feeders can never endure much fatigue; it is true they appear alert, lively, and even spirited, when first brought out, because their stomach and intestines are never loaded, generally half empty; they are what I call slight-ribbed horses, are light in carcass, will show speed for a short distance, but cannot maintain it. They may win a short race; but they are ill-calculated for military purposes, incapable of the fatigue of the chase, but may answer for hacks, where long-continued exertion is not called for. A shy feeder is frequently troublesome, as such an animal will be often found to require stimulants to appetite.

*Roaring* is a common disease among race-horses, more commonly found on the race-course than in the hunting or military stable, or indeed anywhere else. There must be a cause for it: the racer is frequently on the muzzle; this produces crib-biting; the throat of the horse is bound with a strap to prevent the disgusting practice of crib-biting; does not, therefore, this constant use of the strap frequently produce that constriction which causes the animal to emit the discordant noise called roaring?

*Roaring* is a disease which descends from one generation to another. I am aware that the late Mr. Cline entertained a different

opinion; but innumerable instances have proved the incorrectness of it. The scientific Percevall particularly notices the subject in his lectures, but his observations throw very little light on the cause of this incurable disorder. It is, however, an incontestible fact, that a stallion afflicted with roaring will generally produce roars. The disease may not make its appearance at first, but inasmuch as there exists a predisposition in the system, it generally shows itself at an early period, particularly if the animal is put to severe exertion.

Similar remarks will apply to the eyes: a blind stallion, it is well known, will produce stock with eyes which generally lose their sight at an early period of life. It is necessary, however, to state, that if, by accident, the horse has lost his sight, it alters the case; but where from the smallness, muddy or bad quality of the eye, the animal becomes blind, it is very injudicious to breed from him.

The principle of *like producing like* prevails not only with respect to animal organization, but also to the disposition, or what perhaps may be more powerfully expressed, if I be allowed to use the term, by *mental temperament*. Vicious and restive horses generally communicate those evil qualities to their progeny: of the incontestible truth of this doctrine, we have many living examples, particularly in the stock of the powerful grey horse Friend Ned, who died some few years ago; and of the living Lottery, purchased some time since by Louis Philippe of France, for £1,500. I have seen a few good-tempered animals descended from Friend Ned; but by far the greater part of his stock manifest that hurly-burly restive disposition for which the horse himself was so remarkable. Restiveness arises from laziness, a disinclination to exertion, since nothing can be quieter in the stable than these Friend Neds; nothing can be quieter on the road, if allowed to proceed at their own pace; but when pressed to more severe exertion, they testify their unwillingness in a manner very unpleasant to the rider, and of course not unattended with danger. The vice of Lottery is of a different description. He is as dangerous in the stable as he was uncertain and dangerous on the course; and the greater part of the stock which he has left behind him in this country manifest much the same vicious propensities as their sire.

These observations might be extended to many more instances, were it necessary, which it is not, as sufficient has been stated to show how highly advisable it is to avoid breeding from horses of a restive or vicious disposition.

Having already noticed the defective or diseased fore legs, which are generally found in racers, we must here observe, that, although in the first instance the disease or defect might be produced by precocious or over-strained exertions, yet it becomes hereditary, and is communicated from the sire to his progeny. Champion, a horse of acknow-

ledged superiority, became, in the language of the school, *amiss before*; in nine instances out of ten he communicated the disease, and though he was the sire of Signorina and several good racers, yet, generally speaking, the fore legs of his stock *would not stand*.

Instances might be given, were it requisite, to prove to demonstration, not only that the vicious temper is transmitted to the offspring, not merely that the form descends to the progeny, but that almost all the diseases (if not the whole catalogue of them) of which the horse is susceptible are also visited upon the produce.

If a horse prove successful on the turf (supposing him to be quite free from blemish) he continues to run as long as he has a chance of success. His age very soon takes him out of all the great stakes, when he is named for the cups; and as these are, for the most part, handicapped, he is weighted to reduce him to a level with inferior competitors, and he must be an extraordinary animal indeed that can continue to support for any length of time, the overload which he is thus doomed to carry. Speaking on the broad principle, the horse either *breaks down*, is *stumped up*, or *battered to pieces*, before he has arrived at maturity, before he has reached his seventh year; very often before he has attained his fifth year, or perhaps his fourth, or perhaps his third. However, let his age be what it may when he leaves the course, if his performance has been such as to entitle him to distinguished notice, he is announced as a stallion. He is thus announced, be it repeated, after having had his tendons strained to their utmost tension—even to cracking; after having, from over-strained exertion, become a cripple before, and thrown up curbs and spavins behind; after having had, in fact, his constitution destroyed, and his vigour consequently irreparably injured. Can a healthy vigorous stock be expected under such circumstances? Certainly not: yet such is the present state of the turf!

That very superior horse Birmingham was destroyed by over-exertion. Beardsworth his original owner, advertised him for sale in the early part of 1833, and he came into the possession of the late Mr. Scarisbrick, of Lancashire, at the price of fifteen hundred pounds; shortly after suspicions were entertained as to his soundness. I saw him come out for his first race in 1833, at Chester; I saw him take his gallop early in the morning, two days previously to his running, and became thoroughly convinced that he laboured under the first degree of roaring. At the latter end of the summer of the same year, on the demise of Mr. Scarisbrick, this horse was purchased by a Russian agent for the Emperor Nicholas. He will unquestionably produce inferior and diseased stock; his legs are battered and his wind diseased, that is, he is by this time a confirmed and inveterate roarer. The Russian agent was a miserable judge; he had no idea of sympa-

thetic physiology, or he would not thus have spent his master's money; but, indeed, he laboured under much the same degree of ignorance as all these agents do with whom I have had an opportunity of conversing; they form their opinion principally from the successful races which the horse has run, a criterion upon which dependence should never be implicitly placed.

From what has been stated, it is very evident that few of our successful racers are calculated to produce good stock. Let us look for a moment at the manner in which a racer is prepared for the course; at the physic which is administered to him; at the sweatings, the bleedings, &c., to which he is subjected: let us consider these circumstances, physiologically or philosophically, and we shall arrive at the conclusion, that where a horse or mare has been kept on the turf for a series of years, the constitution must have sustained so much injury as to preclude healthy or vigorous stock. Further, let it be kept steadily in mind, that some of our best racers have been produced from animals which had scarcely ever appeared on the turf,—in some instances where they had never appeared, perhaps had never been trained.

I could specify several, if not many, living instances of battered and diseased stallions, whose produce are sure to inherit the defects of the sire, but it might appear invidious, and I shall therefore proceed to state, that any breeder anxious to obtain a healthy, vigorous, promising stock, should select the parents, both sire and dam, in the first place for their vigorous health, and in the next, for their form and animal organization. Should the dam be defective in any point, if, for instance, she be too light in the hind quarters, a sire should be chosen of an opposite form. Should the sire be rather upright in the shoulder, select a dam remarkable for the slope of that part, and thus proceed to counteract defects in form. If the form of both be perfect, nothing more can be wished on that score. It is very injudicious to breed from a very old horse or a very old mare, particularly the latter.

The thread of our story brings us again to notice the Godolphin Arabian, Eclipse, Sir Peter Teazle, &c. The stock of the Godolphin Arabian (contrary to expectation, since his trial as a stallion was merely the result of accident) proved excellent runners, and healthy vigorous animals, though the horse was held in no estimation prior to the appearance of his first-born, Lath; but, although the Godolphin Arabian could not race himself, yet, as he had never been put to any over-straining exertion, was altogether a healthy vigorous animal, and had attained maturity, he produced excellent stock—at least till he became feeble from age, when his stock degenerated in the same ratio.

Eclipse, more celebrated than any horse for the superiority of his stock, did not make his appearance as a racer till he was five

years old; and such was his power and speed that he won all his races merely going at his rate—he was never touched with either whip or spur. His career on the course was short; no person would name in a stake in which Eclipse appeared; and the horse was therefore withdrawn from the turf in the very vigour of life, free from blemish. His stock proved of the very first description for some time; and such was the unreflecting infatuation of the times, that much surprise was expressed when this extraordinary horse, enfeebled by extreme age, no longer answered the ignorant calculations of the breeders.

Sir Peter Teazle, the property of the Earl of Derby, left the turf with a constitution unimpaired; he became a favourite stallion, and answered the expectations entertained from his extraordinary performances, till, like the horse mentioned in the preceding paragraph, enfeebled by age, similar results and similar disappointments were experienced.

The next object of consideration is the degrees or degree of consanguinity, which should be remote, or perhaps better avoided altogether. The system of breeding in-and-in is generally acknowledged to be injudicious; yet I am inclined to think there is too great a proximity in our present racing stock. The first conjunction upon the in-and-in system will produce no falling off in beauty, though a decrease in vigour and energy will be perceptible. The second conjunction will exhibit a very distinguishable inferiority. If the system be pursued for several successions, the procreative faculties fail. If we look at human nature, we shall find that about the third conjunction of the in-and-in system, imbecility ensues, and this is succeeded by idiocy; something similar may be observed in the horse. The Earl of Derby continued to breed upon the Sir Peter Teazle strain till he could produce nothing. Disease, particularly scrofula, is produced by the in-and-in system. If we look at many of the secluded villages in various parts of the kingdom, which are seldom visited by strangers, and where the inhabitants intermarry with each other, we shall find that the greater part die of scrofula, frequently at an early period of life, and as far as relates to numerical strength, we seldom find an increase. If we look at the feathered creation, or animals in a state of nature, we shall find that each seeks his mate amongst strangers, a manifest indication of the wise decree of Providence to prevent the extinction of the species.

From what has been already stated, it would seem that an importation of Arabian blood might be beneficially introduced into our racing stock; and such is my opinion: but the breeder will urge as an objection the inferior size of the genuine Arabian, and that it will take several successive removes before that length of stride can be obtained, for which the English racer is distinguished above all horses in the world. And there certainly

is great weight in this objection, unless some of those horses mentioned by Bruce could be procured, and which have been already noticed in former numbers.

In breeding for the turf, the great object to be attained is speed, and the power or capacity of maintaining it. In the troop horse and the hunter, more substance and more strength are requisite, united with as much speed as possible. The racer is taught or trained to throw all his force forward, and to go as near the ground as possible for the purpose of attaining the greatest possible speed. The troop horse and the hunter are taught to acquire a more lofty action for the purpose of safety. The hack forms another variety; a thoroughly good hack is seldom met with. Cobs seem at present to be the favourites: a hack should be a strong compact animal, and a safe goer.

Let it not be forgotten that the mode of going in the horse is the effect of education; and that a thorough-bred horse will just as easily acquire the more lofty action of the war horse, the hunter, or the hack, as the daisy-cutting method of the course.

Now, if I could so rule it, I would have the four varieties which I have enumerated thorough-bred or full blood, since from the superior form and texture of the thorough-bred horse he is capable of enduring more fatigue, his paces are lighter, more elastic, and consequently easier to his rider. But in the thorough-bred horse, great difficulty is experienced in attaining the requisite bulk. However we seldom meet with a saddle horse, at the present day, destitute of blood; and as the English are distinguished above all other people for their attachment to horse flesh, and since we have many incontestible proofs of the extraordinary improvements in physiology effected by genius and perseverance, we may perhaps at no distant period, witness this consummation so devoutly to be wished, nothing but blood under the saddle. In such a case our cavalry, at present superior to that of any other nation, would be invincible.

It is, however, to the race course that we are to look principally for improvement; for to such perfection has racing arrived, that out of vast numbers bred for the course, few are found to possess the requisite qualities, and consequently come into the hands of the fox-hunter, the stage-master, &c. &c.

So convinced, indeed, have foreigners become of the superiority of our horses, that for some time back several German noblemen have imported many of them for the purpose of improving the inferior breed of their own country. They have also, in imitation of this country, established races, aware that the best (if not the only) method of acquiring and keeping up a superior breed of horses, must arise from the excitement and indefatigable emulation which they call into action. Many of the French nobility and men of wealth have energetically entered into the spirit of improvement in their breed of horses: I have

already mentioned that Louis Philippe purchased that magnificent animal Lottery; the form of this horse is almost everything that could be desired: his temper alone is to be dreaded; and, if it can be neutralized in his progeny, by far the most likely mode of accomplishing that object is crossing him with foreign stock. Even as far as relates to consanguinity, if the nearest degrees were placed in early life in different climates, and the food varied (according to the circumstances of the climates), and afterwards brought together for the purpose of procreation, the defective or diseased stock which, under other circumstances, would not fail to ensue, might perhaps be in a great measure avoided.

The French Monarch is no sportsman; so far from it, he does not hesitate to express his aversion for the sports of the field; and a similar remark will apply to him in regard to the turf: yet, from an ardent desire to improve the horses of his country, and particularly those used in the cavalry, he becomes the patron of the race course, as well as a spectator of its animating operations.

However, our Continental neighbours would do well, when they are importing horses from this country, to import grooms also, and indeed jockeys, if they are anxious for eminence on the course; since, in regard to these two classes, they are placed at an immeasurable distance. This, in fact, they have done to a certain extent; but adopt what plan they will, a century at least must elapse before they can enter into any thing like rivalry with the English turf. The system of grooming in England (as far at least as relates to the race-horse) is frequently overstrained, of which the plan pursued by the Chifneys is a striking illustration. As far as relates to jockeyship, it has attained the acmé of perfection, as exemplified in the riding of Robinson, of Chifney, of Day, of Darling: these men have reached the head of their profession, they constitute the first class: the second class is composed of such men as G. Edwards, W. Scott, Pavis, Conolly, Chappell, Lye, Spring, &c.: in the third class may be placed Wheatley, Nelson, Templeman, Lear, &c. The very worst class of the English jocks are, beyond all comparison, superior to those of France and the Continent. The latter do not understand the method of husbanding the horse's powers, of taking a pull at him, of lifting him along, and of bringing him well home when beaten; in fact, they have no idea of the finishing touches of the art.

The Americans have of late years entered into turf affairs with unparalleled intensity and spirit; they have, like the English, imbibed an invincible passion for horse-racing. I have several times observed, in the course of this paper, that *like produces like*, and hence we perceive the same feeling in the Americans which has long been so strikingly characteristic of their progenitors. Our transatlantic brethren have spared no expence in

procuring horses from this country; and, as might be expected, have at times been most egregiously duped. The most barefaced trick which has, perhaps, ever been successfully played upon them, is the case of Autocrat; a grey horse, bred by the Earl of Derby, from whom he was purchased for twenty-five pounds, by Jackson, the person who brought to this country those unparalleled trotters, Rattler and Tom Thumb. Autocrat never distinguished himself as a racer, nor, indeed, was such a circumstance possible, as he exhibited not one single good point. It is something more than two years since I saw him at Liverpool, in the stable of Mr. Lucas, immediately prior to his embarkation for America. Autocrat is an inveterate crib-biter, a confirmed roarer, and has the worst fore legs I ever saw; from an attentive examination of this horse, I came to the conclusion, that his blood had become impure, his constitution diseased; effects similar to what may be expected from the system of breeding in and in. Recurring to the maxim, that like produces like, what mischief must ensue, since, at this moment, this Autocrat, this rotten horse, is the favourite stallion in the United States! Jackson took with him, to America, papers which he got printed in this country for the purpose of deception, and, by this and similar manœuvres, so far did he succeed in the fraud, that he sold a share of the horse for a large sum, if I be not mistaken, for something approaching one thousand pounds. This same Jackson also purchased Hedgeford, a third-rate weedy horse; yet has this man, by means similar to those already mentioned, contrived to raise this horse also in respect as a stallion. These are convincing proofs that the Americans have much to learn in regard to turf affairs; that, in fact, they are incapable of forming a correct opinion for themselves, since a very indifferent judge of horse flesh would not fail to turn with contempt from the two animals in question. Jackson, however, has already realized a little fortune by the double cheat!

But our Transatlantic brethren obtained a valuable acquisition in Fylde, bred by the late Mr. Clifton, of Lytham, Lancashire, Fylde proved himself a very superior racer: his legs are perfect (a rare circumstance) his constitution good, his form fine; he is something above sixteen hands, accompanied with action as light and as pretty as possible. Yet has this splendid horse been thrown into the back ground by such a diseased ugly brute as Autocrat.

The Americans have received several valuable animals from this country, besides Fylde, particularly through the medium of Mr. Thos. Conah of Liverpool, nor can the Trans-Atlantic turfites do better than trust their commissions to this gentleman, Mr. Connah was anxious to have purchased Lettery, but was outbid by the king of the French. Mr. Corbin, a gentleman from Virginia, not long since purchased Sir Hercules, as well as

several other thorough-breds for the American stud.

Once more let it be remarked, that those who breed from imperfect or diseased animals ought not to expect good stock. The main and leading principle should be to select the sire and dam with fine forms, sound constitutions, free from blemish, and in the vigor of life: then, and then only, can satisfactory results be reasonably anticipated. If we take a glance at vegetable nature, we shall find that the agriculturist, from long experience, has become well aware that if his seed be defective, diseased, or of an inferior quality, he cannot expect a good or healthy crop: hence, the grain which he deposits in the earth is selected with the greatest care. It need hardly be observed how powerfully this principle applies to the object under consideration.

#### CONCLUSIVE OBSERVATIONS.

From what has been stated in the preceding pages, if the reader will reflect for one moment, he will perceive, that, as the thorough-bred horse exhibits a very superior animal organization, inasmuch as his bone is larger and more solid, his tendon stronger, and much better defined, his muscle more firm and more elastic: in fact, as his form and quality are so much superior, it results that he is much more active, much more fleet and much more powerful, than any other variety of the tribe. In consequence of this admirable concentration of superior qualities, he will not only perform much more labour in a given space of time, repeat the task oftener, but comes much quicker round again if he happens to be over-marked; that is, when over-fatigued, he sooner becomes re-invigorated than an animal of inferior blood. When a horse of the latter description has been over-marked, his spirit sinks, and he frequently dies under it; should this not happen, his recovery is slow, and his restoration seldom, if ever, complete.

If we pursue the investigation, we shall find that the thorough-bred horse is as remarkable for his instinctive sagacity as for the superiority of his animal powers: he is more susceptible of education than others of his tribe, and is consequently sooner instructed in whatever may be required of him, arising no doubt from his superior energy and courage, qualities which uniformly produce great confidence. If we look to other varieties of animated nature, to birds for instance, we shall find that the bolder and more courageous the bird, the more easily is he taught the lessons which man chooses to impart. Of the truth of this maxim, those beautiful birds, the Peregrine Falcon and the Merlin Hawk, are incontestible illustrations. No person can contemplate the impression (or *expression*, perhaps, would be a better term) of the Peregrine Falcon without feeling a conviction of the bird's undaunted courage: to say nothing of the peculiar mode in which he is armed for war or rapine, his erect attitude, his very

large bold eye, its clear, vigorous, and unquailing expression, unite in producing the idea of a very superior and a very energetic spirit. The Merlin Hawk may be regarded as a dwarf Peregrine Falcon: similar in form, form and expression, similar in plumage, similar in habits, the difference in these birds may be said to result merely from the size, the Peregrine being thrice as large as the Merlin. In one respect, however, they perfectly agree: they immediately become familiar with man, and evince a susceptibility of education which will be vainly sought in any other class, variety, or ramification, of the feathered creation. I believe, indeed, that it will be found to obtain, throughout animated nature, that the more courageous the animal, the more easily is it domesticated, and, induced to assume habits at variance with its original destination.

Hence, we may very reasonably conclude, that, as the thorough-bred horse possesses greater courage than the baser breeds, so is he more capable of receiving instructions. I must recapitulate:—being more powerful, more active, more fleet, more capable of enduring fatigue, more courageous (and consequently more tractable, and an apter scholar), than any other variety of his tribe, he is consequently infinitely better calculated for military purposes.

If we take a slight glance at the period when the Turks first rushed into Europe and cut to pieces the disciplined legions of the emperor of the East, we shall find that they uniformly placed their principal dependence on their cavalry, which was numerous; and (though, as far as related to military movements, was what might be justly termed irregular) proved invincible. Their horses, though not exactly what we understand by the genuine Arabian, were, nevertheless, nearly allied to him, and infinitely superior to those of their opponents; further, they were more tractable—they obeyed the most trifling motion of the rider with astonishing alacrity; consequently the latter, owing to the little trouble he experienced in the management of his horse, was enabled to use his scimeter with more activity and effect. When the Turks, after they became possessed of Constantinople, invaded Italy, their army consisted chiefly of cavalry, and, though they thus opposed themselves to the best disciplined troops and the most skilful leaders of those times, the Italian soldiers, both horse and foot, were utterly unequal to the task of successfully opposing these active, though semi-barbarous, horsemen. To the very same cause we may attribute the overthrow and destruction of Crassus and his army by the Parthians.

What is the present mode of providing horses for the British army? It is accomplished through the instrumentality of agency. When horses are wanted, persons are employed to procure them at a stipulated price. It becomes the object, therefore, of those persons to

procure the horses at the lowest price possible, in order to enhance their profits: so long as the animal will pass, it is sufficient for their purpose—it is all they aim at; and it need scarcely be remarked, that the sinister influence which such a system is calculated to bring into active operation, must be productive of the worst consequences. To say nothing of the speculation which will not fail to result, the horses appointed for a particular regiment will be uniformly found ill-assorted individuals. The colour may not be an outrage upon the order received; the height and the age may be equally unobjectionable; but in what manner have these animals been educated?—that is, for what purpose have they been employed prior to the period when they came into the hands of the contractors for the army? Not in any thing analogous to the military manege or military manoeuvres, but, as they have arrived at that age when their habits may be said to have become fixed, they are consequently ill calculated for the purpose for which they have been brought together: and therefore it is impossible for our cavalry to reach that degree of perfection which, under other circumstances, (that is, under a correct system of breeding, training, and management,) might be confidently anticipated; which might, indeed, most certainly be accomplished; and that, too, at a much less expence than the government is at present called upon to pay for an establishment of a very inferior quality.

If we look at human nature, it is very well known, that one person will excel as a mechanic, another as a musician, and so on; and that it is utterly impossible for the same individual to become an adept in every art and science; and, above all, that when once habits have become fixed, that when a man has exercised any art for a considerable length of time, it is no easy task for that person to abandon his established occupation and acquire a tolerable knowledge of a profession differing very widely from it. No; if we are anxious to attain perfection in any art or science, we should pursue that, and that only. If, therefore, we apply this reasoning to the brute creation, we ought surely to make every allowance for the horse, whose faculties can bear no comparison with those by which human nature is so pre-eminently distinguished.

It will naturally enough be asked, how I would remedy the evils of which I complain? To which I answer,—I would breed the horses for military purposes, and train them exclusively for that employment. A horse that has been trained to the course and raced for several years, very rarely, if ever, makes a good hunter. His business as a racer has taught him a mode of going, inconsistent with the character of the chase, and the horse therefore experiences the utmost difficulty in abandoning what, from “habit, has become second nature,” and substituting an action to which he has never been accustomed, and which he consequently does not understand.

I have often heard it remarked, that the thorough-bred horse seldom jumps well, an idea which has arisen from the racer having been removed to the hunting stable, and been forced into a new profession, with his racing habits and modes confirmed upon him.

The quality of cavalry must mainly arise from the horses. This indispensable part of an army, to be absolutely efficient, must be mounted accordingly. I would therefore have horses bred purposely for the military, as I have already observed: I would have them trained for that purpose, and that only, and, inasmuch as their attention would be always directed to the same system, a degree of superiority, or comparative perfection, would be attained which it is impossible can result from the present, or, indeed, any other, plan. When I say that I would have the horses thorough-bred, I shall be asked how I would contrive to produce them with sufficient bulk for military purposes? To which I answer, that, having shewn the surprising alterations (not to say improvements) which have been effected in animals; having also instanced the hunters of Mr. Little Gilmour, (to which I could add those of Mr. Wynne, of Shrewsbury: of the late Mr. Scarisbrick, of Scarisbrick Hall, Lancashire: those of Sir J. L. L. Kaye, of the Grange, Yorkshire; and a score of other instances;) I entertain not a shadow of doubt of being able to produce thorough-breds sufficiently bulky, not only for the Dragoons, but for the Horse Guards Blue, and the Life Guards also. Let it, however, be steadily kept in mind, that bulk, without blood, amounts to nothing, as far as relates to the present subject; or, in other words, quantity (measurement or dimensions,) will not supply the deficiency of quality. A square inch of bone from a thorough-bred horse is much heavier than a square inch from a cart-horse, the latter being more porous, or less solid, than the former. The same remark will apply to the tendon and the muscle. Consequently, a thorough-bred horse will be stronger than a cart horse, in little more than half the compass. It is asserted (and I have no doubt of the fact,) that the thorough-bred horse can support a greater weight on his back than the cart horse. Prior to the commencement of the late war, and for some time after it broke out, the Blues (and the Life Guards also,) were mounted upon absolute *cart horses*, and became convinced from woful experience, that such animals would not answer the purpose. The Blues were sent to Flanders in the early part of the war, when it became manifest that their horses were miserably deficient in activity; that they were unable to endure the fatigues, or support the privations of campaigning. The greater part of them died. But I must honestly confess that I should not like to be confined to the colour of the horses which are used by the two last-mentioned regiments, were I to be employed for the purpose in question, as I feel a paramount objection to black—it is a

presumptive proof of base blood. I shall be told that black racers have been seen on the course: I have seen them myself, but never saw a superior racer of that colour. Black-and-all-black, I shall be told, was a superior horse, and a similar remark may be extended to several others: but as I never either saw or heard of a genuine black Arabian, these black thorough-breds shew that they have inherited the colour, at least, from base blood; and where the baser colour appears, I should be suspicious of the quality.

This country affords every facility for carrying the plan into execution, of government breeding horses for military purposes. It would be quite unnecessary that horses bred for our cavalry should, in early life, be artificially fed to repletion, like the racer; on the contrary, when the foals were sufficiently old and strong to leave their dams, they might be allowed to run in the different forests and crown lands (under proper management, be it remembered,) during not only the early part, but for a great period of their education. I shall not go into a minute detail of the plan, as I do not imagine it is likely to be carried into execution, though the circumstances of the times are well calculated for such an undertaking: nor can any doubt be entertained by those who are capable of forming an opinion on the subject, that an *invincible* cavalry might be thus formed at less than half the expence at which it is at present got together.

### PHRENITIS IN SHEEP.

By MR. J. TAIT, PORTSOY.

(From the *Veterinarian*.)

Some time ago I was requested to look at a flock of sheep belonging to a farmer in Forfarshire. Upon inquiry, I found that the sheep, owing to the dry season (1826,) had been considerably stinted in their food in the summer time, and that they had been, about a month before I saw them, staked in a field of very fine turnips. The appearance of the sheep was rather strange; for about a minute they appeared quite dull, and then all at once became quite frantic, dashing themselves on the ground, and running at every person within their reach; others would all at once spring from the ground and fall down and die.

I caught one, and bled her copiously, which seemed to relieve her much. I then gave her a dose of Epsom salts, which in a few days produced a cure, and by such simple treatment many of the sheep recovered.

On examining those that died, they invariably presented the following appearances:—On opening the abdomen the peritoneal covering of the bowels appeared more vascular than in its natural state, and there was some black spots on the mucous membrane of the small intestines. The lungs were very much congested. On opening the cranium, I found the vessels of the brain turgid, and almost in a bursting state, and in fact, in some cases, rupture had actually taken place, for there was an effusion of the blood on the surface of the brain:

The flock was immediately removed from the turnip field, and turnips were given to them more sparingly, which soon put a stop to the epidemic, if I may so term it.

## SPEECH OF THE EARL OF DARLINGTON

AT A DINNER GIVEN TO HIM BY THE AGRICULTURISTS OF THE SOUTH DIVISION OF  
SHROPSHIRE, on the 17th OCT.

The Earl of DARLINGTON rose, and, after a few preliminary remarks, said he must confess there was a time, and not a very distant one, when he hoped that he might now have stood in a situation to congratulate them on better days, or at least on the early prospect of them. (*Hear, hear.*) He was sorry to say, however, that his expectations had not been realized: and he regretted it so much the more, as the manufacturing, commercial, shipping, and every other interest except the agricultural interest was thriving and prosperous. The agricultural interest alone was in a state of suffering and depression. This would appear more extraordinary when he assured the meeting that at the present time—he spoke from authority—there was a most decided majority in the House of Commons of friends to the protection of agriculture. (*Hear, hear.*) He said this would astonish them, inasmuch as they would naturally ask, why, if this were the case, something had not been done for their relief? (*Hear, hear.*) He would fairly state what, in his opinion, was the only circumstance why this had not taken place—viz. that although there was a decided majority for agricultural protection, and although that majority was firmly united against any competition of foreign corn, they were not united as to what was the real cause of agricultural distress, and still more were they disunited as to what were the proper remedies for that distress. (*Hear, hear.*) He was warranted in saying this, from what had taken place this very session in the House of Commons: many distinct propositions had been brought forward, but from want of union amongst their friends it had been impossible to carry any of them. (*Hear, hear.*) What had these measures been? It was far from his wish to countenance any delusion, or lead them to believe that it was in the power of parliament suddenly to convert a state of adversity into a state of prosperity; but parliament had at least in its power to do a little, and to raise the drooping spirits of the farmers, and to make at least a beginning in the good work. (*Cheers.*) Three distinct propositions had been made for the relief of the farmer during the past session of parliament; first, it was proposed to mitigate his burdens by means of reduction of taxation. Now he was free to say, with regard to general taxation, that there was but one tax which pressed heavily on the farmer individually, and that was the malt tax. (*Hear, hear.*) The motion for the repeal of that tax was made by the Marquis of Chandos on the 10th of March last. The way in which it was brought forward caused a great deal of disunion in the agricultural camp; for though it was readily admitted that the repeal of the tax would, in certain districts, give great relief, yet that such relief would not affect agriculture generally, but partially, inasmuch as there were many districts in which no barley was grown, and some counties in England in which but very little or no malt liquor, was consumed by the labouring classes. To Shropshire, however, it would be of great advantage, not only to the growers of barley, but to the consumers of beer, and he was therefore one of those who had exerted themselves most strenuously for the repeal of this tax. (*Loud cheers.*) The arguments were, however, very strong against them, and excited a very general feeling not only in parliament, but throughout the kingdom, that the relief which it

promised would not at that time compensate for the great defalcation of revenue which it would occasion. The second question was the relief of the agriculturists by the reduction of local burdens. It was the opinion of those who supported this mode of relief, that there were certain local burdens which now fell peculiarly on the farmer, which ought to fall generally on the community at large; and although the relief, if obtained, would, after all, have been to a small amount, yet that was a greater reason why it should not have been denied. The Marquis of Chandos again brought forward a motion for relieving the farmer from part of the highway-rate, and a small part of the county-rate, which, perhaps, in all, would not have amounted to 200,000*l.* a year—a mere drop in the ocean of taxation (*hear*); yet this motion even was violently opposed, and lost by a large majority. Now in considering what measures might be brought forward to relieve the farmer of local burdens, which fell peculiarly upon him, there was one above all others, and that was the poor-rate. (*Hear, hear.*) The poor-rate at present amounted to somewhat like 6,000,000*l.* a-year. The way to do justice to the farmer was not to make it a parish tax, as it now was, but a state tax. (*Cheers.*) Then every man, every interest—the manufacturing, the moneyed, and all other interests—would contribute their share to that which now fell almost wholly upon the farmer. Nothing was more absurd than the assertion that this rate was not paid by the farmer. He was perfectly aware that to a certain extent it fell upon other interests: but all the other interests combined did not pay more than one-sixth part of the whole, whilst the remaining five-sixths were paid by the landed interest. (*Hear.*) That was allowable certainly at the time when poor-rates were first instituted, and when they were very properly made payable mainly out of the land; for at that time the land was almost the only source of wealth, and it was perfectly fair that all such burdens should be thrown upon it. Now the case was widely different. Now there were many other employments, far more profitable; and, depressed as the agricultural interest now was, if not relieved in this way, it was very difficult to see how it could be relieved at all. (*Hear, hear.*) Then came the third question, that of an alteration in the currency. (*Hear, hear.*) On this point he would not at present enter into detail, but would reserve himself for an early occasion, when he would take the opportunity of delivering in full his sentiments upon this most important branch of the subject. He was convinced that almost all the causes of agricultural distress proceeded from the existing state of the currency. It was, however, a complicated subject, one in which a great variety of opinions existed, and one in which it would be very difficult to effect any alteration. At the same time necessity knew no law, and it could not be denied that Mr. Peel's bill of 1819 had made a much greater change in the prospects of every interest, especially the agricultural, than had ever been anticipated by the warmest promoters of it. (*Hear, hear, hear.*) The time had indeed arrived, when every landlord and landed occupier in the country would be totally ruined unless some alteration took place. (*Hear, hear.*) That was the state of the case at the present moment. His object had been not to advert to general politics, but to set before them the existing state of the agricultural interest, and to suggest for their more mature consideration those measures which, in his opinion, were calculated to remedy the evil (*cheers*); and he would, in conclusion, assure them, that so long as he continued

a member of the House of Commons, his unabating, zealous, and undivided attention should be given to their service. He would in every respect devote himself to their cause, and never sleep on his post, but diligently watch every measure affecting them; he would to the utmost of his power promote their individual interest, convinced that in so doing he would only do his best to promote the true interests of the community at large. (*The noble earl sat down amidst general cheering*).

ULSTER.—The generality of persons passing under the denomination of farmers in this part of Ireland are nothing more than cottier tenants, holding from year to year small patches of land, which vary in extent from six, ten, fifteen, to twenty acres. In some instances, and those not a few, the rent is as high as 3*l* or 4*l* an acre, and the agent of the landlord (a person called a bailiff in England) is rigorous in enforcing payment to the last penny. Now the present price of the best wheat that comes to market is not more than 8*s* the cwt. (112*lb*), and the prices of pork, butter, and every other article of agricultural produce, were never within the memory of man known to be so low as at this moment. You may judge, then, of the extreme difficulty which such a farmer as I have described finds in meeting the demands upon him, even though he toils incessantly from morning till night, and except on very rare occasions, denies himself and his family a morsel of that pork, or a particle of that butter, which he disposes of to such little account in the market. Having always, however, the fear of ejectment before his eyes, he contrives somehow or other to be prepared for the visit of the agent, for the face of his landlord he scarcely ever sees, and the rent-day is this and in every other quarter, from Ballycastle to Crookhaven, is like anything in the world but that delightful picture which the graphic pencil of Wilkie has so admirably painted. Instead of seeing parties with gladsome countenances grouped together in the Squire's parlour, and the butler preparing to supply them with libations of his master's best port while they are regaling themselves, you here behold persons whose faces never look gloomy or anxious, except when the Squire's agent is expected. In remote districts, where he has no general place of rendezvous for all the tenants to assemble, he goes round from cottage to cottage with a pen and ink at his button-hole, like a tax collector. He enters with an air that tells the inmates his visit must be short, as his time is precious. His brow bespeaks the very sternness of exaction. The farmer (if I might so call him), anticipating his arrival, has already in his hand a little bag tied at both ends. In the one corner rolled up in a piece of soiled paper are three or four bank notes, and in the other a quantity of silver, with copper money enough to make up the fractional part of whatever may be the sum due. The whole is instantly transferred from the poor man's bag to the agent's well-lined pockets, and not one farthing is ever remitted in consequence of bad crops or low prices. The word "abatement," according to the English interpretation of it, is not known in the agrarian vocabulary of Ireland. This is all that the tenant knows of his landlord, or sees of his landlord's agent, until the next period of payment comes round, unless, being either unprepared or refractory, he should hear from both through a third character, termed a "driver," in which case he will do so at the expense of his house and home.

BEEs.—A hive of bees belonging to Mr. Fletcher Greenip, of Portinscale, near Keswick, was taken some time since, which weighed 100*lbs*., the hive only weighed 62*lbs* when the raiser was taken off. Such was the situation of the hive, that but one raiser could be placed under it, which compelled the bees to sit on the outside for more than a month before it was taken. They swarmed on the 20th of June, and were therefore little more than 60 days in the hive; a more extraordinary short period for the production of so large a quantity of honey was scarcely ever known.

## DEVON AGRICULTURAL SOCIETY.

The Fourth Annual Ploughing Match for the premiums offered by this Society, took place on Tuesday, Oct. 20th, in a field on Raddon Court Barton, Thorverton, the farm of Mr. Reynolds; when the premiums were adjudged as follows:—

|                                                                                      | £. | s. | d. |
|--------------------------------------------------------------------------------------|----|----|----|
| First prize to No. 6, John Cousins, Ploughman to J. H. Ley, Esq., Trehill.....       | 2  | 2  | 0  |
| Second ditto, to No. 11, Thos. Coles, Ploughman to Mr. James Gould, Broadclyst ..... | 1  | 10 | 0  |
| Third ditto, to No. 21, John Hill, Ploughman to Mr. S. Drew, Exminster.....          | 1  | 0  | 0  |
| Fourth ditto, to No. 14, Wm. Embury, Ploughman to Mr. Charles Drew, Bradninch.....   | 0  | 15 | 0  |
| Fifth ditto, to No. 24, Daniel Field, Ploughman to Mr. George Field, Sandford....    | 0  | 10 | 0  |
| Sixth ditto, to No. 20, John Grant, Ploughman to Mr. Pridham, Cheriton Fitzpaine..   | 0  | 7  | 6  |

### OX PLOUGHS.

|                                                                                      |   |    |   |
|--------------------------------------------------------------------------------------|---|----|---|
| First prize, to No. 4, George Ewings, Ploughman to Mr. John Tremlett, Sandford ..... | 1 | 0  | 0 |
| Second ditto, to No. 3, Thomas Granger, Ploughman to Mrs. Griffin, Broadclyst..      | 0 | 15 | 0 |
| Third ditto, to No. 5, John Harding, Ploughman to Mr. John Upcott, Thorverton .....  | 0 | 10 | 0 |

The Judges recommended No. 17, Wm. Horwell, ploughman to Mr. Ware; and No. 18, John Tothill, ploughman to Mr. Fisher, to the notice of the Committee; and also No. 15, William Chamberlain, servant to Mr. Reynolds; and No. 19, William Jerand, servant to Mr. Hutchings, (both lads,) to each 5 shillings were awarded by the Committee.

The President was John Hipsley Tuckfield, Esq.; Vice President, Edward Simcoe Drew, Esq.

The Judges were Mr. John Wippell, Mr. Francis Pratt, Mr. Thomas Milton.

The competition was exceedingly good, and the ploughing was pronounced to be superior to any ever before witnessed in the County.

## HEREFORDSHIRE AGRICULTURAL SHOW.

At the Annual exhibiton, after the Judges had inspected the Stock, the Prizes were awarded as follow:—

1. Best two-year-old Heifer, a cup presented by T. A. Knight, Esq. was awarded to W. C. Hayton Esq.; but the Prize was withheld in consequence of it not being adjudged to a Herefordshire man, and two cups will be presented next year for the best Heifer.
  2. Best pair of yearlings, a cup presented by Sir R. Price, Bart. M. P. awarded to W. C. Hayton Esq.
  3. Best pair two-year-olds, a cup presented by E. T. Foley, Esq. M. P. was awarded to Mr. Turner, of Noke.
  4. Six best yearling Steers, a cup presented by Kedgwin Hoskins, Esq. M. P. awarded to Mr. Thomas Yeld, of the Broom.
  5. Best pair two-year-old Steers, a cup presented by W. C. Hayton Esq. awarded to Mr. Turner, of the Noke.
  6. Four best yearling Ewes, a cup presented by Society, to Mr. Robt. Tully, of Huntingdon.
  7. Four best yearling Wethers, a cup by the Society, to Mr. John Tench, of Bromfield, in this county.
  8. Four best yearling Ewes, a cup by the Society, to Mr. Robt. Tully, of Huntingdon.
- Amongst the extra Stock exhibited this day, and

which attracted universal admiration, was a fat cow of extraordinary merit, bred and fed by Mr. John Turner of Noke, brought in a caravan to the Show; and one of the fattest ewes ever seen at the Show, the property of Mr. Culsha, of Eign Hill near Hereford.

The cattle sent by the following gentlemen also excited general admiration;—Six Steers belonging to Mr. Tench, but disqualified for the prize, Mr. T. having gained it last year.—Cattle sent by Mr. Adams, Marden, Mr. C. A. Mason, Tarrington, Mr. Morris, Stockton, Mr. Peary, Monkland, &c. &c. and Sheep by Mr. Phelps, Sellack, P. Jones, Esq., Sugwas, Mr. Hewer, Above Eign, &c. &c.

In the evening a numerous and highly respectable company sat down to a sumptuous dinner at the Hotel, P. Jones, of Sugwas, Esq. in the chair, the worthy President, Sir G. Cornewall, Bart. we regret to state being prevented from attending owing to indisposition; every seat at the tables in the great room was occupied, and several were obliged to dine in an adjoining apartment. The evening was past in the friendly discussion of various topics connected with agriculture, and festive enjoyment enlivened the cheerful board till a late hour.

## NEW FACTS IN PROOF OF THE ADVANTAGE OF SPAYING MILCH COWS.

By M. REGERE, M. V., BORDEAUX.

(From the Veterinarian.)

Several instances have been related in your Journal of the good effect resulting from the spaying of milch cows. I would beg leave to add some cases which have come under my own observation. The cows were taken from the best dairies, but, for obvious reasons, I selected those that had met with some accident at the time of calving.

CASE I.—A large cow fifteen years old, had calved on the 24th January, 1834, and had, a few days after parturition, given from three to four gallons of milk per day. On the 22nd of April following, she yielded only two or two and half gallons. I then operated upon her. The pain of the operation, and the restricted diet to which she was afterwards subjected, diminished the produce to half that quantity.

As soon as the consequent inflammation had disappeared, and the cow returned to her usual food, the flow of milk rapidly increased; and, in fifteen days after the operation, the wound having healed, she yielded daily from two to two and a half gallons, and that quantity has not yet diminished. She has also taken on a disposition to fatten, and is in better condition than she ever was before. She has once shown a desire for the bull, but was not sent to him.

CASE II.—A small cow, six years old, calved on the 26th of March, 1834, and at that time yielded two gallons and a-half of milk per day. On the 30th of April she gave two gallons, and she was then spayed. She suffered little from the operation; her milk did not diminish, and she yields the same quantity to the present day. She has not shewn any longing for the bull.

CASE III.—A little cow calved on the 12th of April, 1834.—Some days afterwards she yielded two gallons of milk per day, and she was operated upon the 13th of May. She seemed, for a considerable time afterwards, to be in a poor state of health; her skin became yellow; the hair fell off in patches, and particularly about her fore-quarters. She moaned sadly from time to time, and her appetite considerably diminished. The quantity of milk remained the same.

On June 20th she seemed to be really ill, and yielded, during seven days, little more than a gallon of milk per day. The quantity gradually lessened after that period and continued to decrease until the end of July, when she was evidently dropsical. She was sometimes better, and sometimes worse, until the 4th of September, when she died.

Two pounds of a bloody serosity were found in the thorax. The lungs contained numerous tubercles; some hard, and even stony, and some soft, and others filled with purulent matter.

On opening the belly it contained, at least, seven gallons of a similar fluid. The fourth stomach and some of the intestines were softened and black, and the food contained in the first stomachs was fetid. The liver, enlarged and yellow, was softened, and it also contained many tubercles, hard or soft.

The womb was unaffected, except the extremities of the two cornua, which were of a yellow colour, and hard. Few traces of the operation of spaying remained, unless in the sublumbar region, in which a spot of a blackish colour was seen where each ovary had existed. A white tenacious tissue had united the incision made through the abdominal muscles, and caused the parietes of the abdomen to adhere strongly to the skin.

This examination after death proved that the cow was not lost from any morbid consequence of spaying, but from ascites, produced by the lesions stated, and which had existed before the operation.

CASES IV & V.—Two cows were operated upon in the month of May of the same year. One eight years old, and giving two gallons of milk per day, and that had calved on the 10th of April, was spayed on the 8th of May. She suffered from the operation, and did not give more than two or three quarts per day; but she soon recovered, and when the wound was healed, yielded her usual quantity, and which she continues to do unto the present period.

The other aged ten years, and that had calved on the 15th of April, and gave, a month afterwards, nine quarts of milk per day, was spayed on the 15th of May. In four days after the operation she gave again her usual quantity of milk; this increased to ten quarts, and she yields that unto the present day.

These cows showed a disposition for, and went to the bull several times after the operation; and, being incapable of conceiving, the oestrus returns on them periodically. The first has been with the bull four times, and the other twice.

These five cows have continued to yield the same quantity of milk which they gave at the time at which they were spayed; and this, on a fair calculation of the usual gradual diminution of the secretion, is double the amount that would otherwise have been obtained in the whole period. We must not yet go farther than this, but if cows that have been spayed should continue to yield such an extra quantity of milk as long as they live, the operation will be valuable indeed.

Recueil, June 1835.

TRIFOLIUM INCARNATUM.—We have witnessed what appears to us a very improved method of sowing that estimable crop for green fodder, the Trifolium Incarnatum. The land was ploughed, and effectually cleared of weeds and couch. The surface was then rolled till it became very solid, and in that state was very correctly harrowed, the teeth of the instrument forming straight shallow drills. In these half of the seed was sown: then the field was cross-harrowed, and the remainder of the seed was sown in these second drills; finally, the ground was harrowed the third time to cover the seeds. The season was the middle of September: the sowings were made broad-cast; but as in all such cases, the major part of the seeds fall into the drills. It is evident that this method must secure the grand desiderata of clean well-moved land, and a state of solidity which suits the plant. It has been said that it will not prosper in moved ground, but we know that this opinion is incorrect; and it is at best a slovenly practice to sow upon stubble, which has been merely raised by the scarifier. It is now too late to sow Trifolium but it may answer if the season be deferred till March.

## AGRICULTURAL INTERESTS.

TO THE LANDOWNERS OF GREAT BRITAIN.

My Lords and Gentlemen,—The arduous Parliamentary duties in which many of you have been engaged, and all interested, being over, you are for a while relieved from your attendance and anxiety, and have retired into the country, there peacefully to repose amidst your neighbours and tenantry, and much as you have heard of agricultural distress in both Houses of Parliament, and much as you have read in the public prints, you must be convinced that all you have heard falls far short of the reality, for agriculture is drooping and decaying on every hand. Being, doubtless, well prepared, as well as anxious, to adopt any reasonable plan to relieve and ameliorate, if you are not able altogether to remedy, this appalling situation of things, I take the liberty of thus addressing through you the medium of the press, for the purpose of unfolding the causes and origin of it; for on our knowing this all our probabilities of successfully applying a remedy depend.

The low price of corn;—the pressure of the poor rates; and the want of confidence in the markets, are beyond dispute, the causes of the deficiency in the farmer's return for his labour and capital, and which, of course, hastens him rapidly to ruin. But what originated two of these evils, and increased the other? This is the question for your consideration. I assert without fear of successful contradiction, that it is the *large farm system*. You may probably startle a little at this, but examine immediately, and you will see whether or not I am able to maintain the opinion. The low price of corn, and the pressure of the poor rates, depend so upon, and are connected so with, one another (as I shall presently show,) that I shall not attempt to separate them in examining their bearing upon the present state of things.

You are all aware, my Lords and Gentlemen, that the present large holdings arose during the time when corn was selling remarkably high, at the expense, and to the destruction, of a number of small farms, which monopolists endeavoured to unite; and not a few by means of bribery, and connexion with the land agents; and by taking them over the heads of their less influential neighbours, and thus grasping as much as possible of the profits resulting from farming at that period. And what became of the small holders? They were obliged to live upon their little capital as long as it lasted, and then apply to the parish to keep them, their wives, and their families. Now they can only be kept by the land, and the question is, whether they are to be supported by their own honest and independent exertions; or by the contributions from the land in the form of poor rates, to encourage idleness and vice? But what was the effect of this? It increased the number of labourers in the parishes, and they apply to the large farmers for employment, perhaps upon the very land, of which, had the moderate size system been encouraged, they might have been masters. But no; he has no employ for him: the large farmer has his thrashing machine, and wants far fewer hands than the small farmer employed, who thrashes all with his flail. It matters little to him that the farmer can afford to sell his produce for less money by this—he has nothing to buy it with, but what comes from the parish funds, and here then is another way in which the system presses upon the poor-rates. Now it must be evident that any thing which increases the poor-rates, *must increase the expense at which the farmer raises his corn*; it is in fact a tax upon his produce, and a tax which Ireland, which supplies us with corn duty free, does not pay.—Poland does not pay it; nor is it paid by any of the foreign corn which is imported into this country; and so long as the poor-rates continue to press upon the land in the extensive and increasing manner they do, the English farmer cannot compete either with Ireland, or our continental neighbours, in the growth of their corn. But the large farm system causes a less consumption of farm produce. The almost extinguished small farmers are dragging out a miserable and heartless existence upon parish pittance, and they do not consume near so much of any kind of farm produce as

they would do, were they independent small farmers. It is a fact which cannot be doubted, that Great Britain now produces more corn than it consumes; and yet our population is vastly increasing, and our land is not extending; this is a paradox, and solved only by the fact, that the poverty of many consumers disables them from consuming as much as they otherwise would do; and to what is this referable but the above mentioned cause. This is the true cause of the un-remunerating price of corn, as well as that of the pressure of the poor rates, and no remedy for agricultural distress will be at all availing, unless a blow be struck at this mainspring of the evils under which agriculture groans. The moral effects of this system is equally terrible. Idleness, pauperism, dishonesty, incendiarism, and disobedience, are but small evils compared with what it produces, and then there is the maintenance of all this, and the prosecution of crimes attendant upon it, all fall upon the land, and all increase the expense of raising the corn. The large farmer too has an *unfair undue influence upon the markets*, and by his connection with corn dealers, his quantity in hand, and his procrastinating, speculating plans, and what it unsettles confidence, but actually influences the sale of the smaller farmer's produce. Now my Lords and Gentlemen, you have it in your power to stop this dreadful havoc which it is making, and destroying the very vitals of agriculture. Your land agents may approve, and contend for large farms, because they are less trouble to them, but heed them not. No farmer should occupy upwards of 150 acres;—it is as much as any man moderate in his wishes would desire;—and as much as any man of ordinary capacity, can well manage. Every three-hundred acre farm you divide, will evidently be creating an honest and independent livelihood for one more family, the head of which is perhaps as capable, and more capable of conducting it, than the large occupier, but whose means do not enable him to occupy one of twice that extent. The remedy I say is in our hands, examine how far the principle is correct, and then set fearlessly and earnestly about it, and you will be repaid no doubt, by the gradual improvement of agriculture. But if you do not, the small freeholders must petition the legislature;—and *they will petition* because *they feel*, the opinion is rapidly gaining ground that the large-farm system is the source of almost all the miseries under which agriculture groans.

I have the honour to be, my Lords and Gentlemen,

Your humble obt. servant,

W. E. N.

**HOP DUTY.**—EAST RETFORD, Oct. 28.—The hop duty for the North Clay district has just been made up, and we subjoin the amount; for the sake of comparison, we submit the sums collected yearly for the last eight years, being the whole duty of 188 8d per cwt:—

|          |       |    |   |          |       |    |    |
|----------|-------|----|---|----------|-------|----|----|
| 1828.... | £2727 | 6  | 4 | 1832.... | £1621 | 2  | 4  |
| 1829.... | 393   | 3  | 4 | 1833.... | 1621  | 17 | 0  |
| 1830.... | 1790  | 3  | 8 | 1834.... | 4870  | 10 | 10 |
| 1831.... | 3762  | 11 | 2 | 1835.... | 347   | 16 | 2  |

The trade in the North Clay hops here is in a very stagnant state, the business done being upon a limited scale, at prices similar to those quoted at our October fair, say from 6l to 7l per cwt. Most of the private families have been liberally supplied from Kent and Sussex, at prices varying from 3l 12s to 4l 10s and 5l. per cwt.

**USEFULNESS OF A PIG.**—He is the most useful beast in the whole creation, inasmuch as food is the first of man's wants; and a pig is food from top to toe. He is fattened in a shorter time, and at less expense, than any other animal, and there is no part of him which cannot be turned to account. Poultry of all kinds claim companionship with the pig, and are improved by his society: and no fish can fry without his lard. His skin serves us for saddles; his bristles clean our teeth, and brush our coats; and to sum up all, he multiplies his species in a degree proportioned to his utility.—*Captain Blakiston's "Twenty years of Retirement."*

## THE MALT TAX.

(To the Editor of the Suffolk Chronicle.)

SIR,—I was surprised at the official report on the probable effect of taking off *half* the malt tax. Sir R. Peel's "unanswerable arguments" are scattered to the winds; and supply and demand are admitted to rule prices, and not the Government money in the hands of the maltsters, or the currency!! But this new light portends no good, and we must beware of "the poison in the pot."

Taking off *half* the malt tax, might probably induce the distillers to use a greater portion of malt, as spirit drawn from malt is worth 2s per gallon more than such as is drawn from raw grain; but if more malt was used, by so much less raw grain would be used, and thus the consumption of grain would not be increased—and if the reduction of duty was accompanied by a repeal of the duty on foreign barley, the means of the farmers and labourers to consume would be reduced or annihilated, and thus the revenue would not be increased by taking the duty off *barley*, and we must infer, that the alteration proposed is intended as a stepping stone to a free trade in corn. It makes no difference whether one grain is admitted duty free, or all; the effect is the same *in the end*. We should be inundated with foreign barley if the duty were repealed at such a low price as to disable the home growers to compete with them; and thus the land must be appropriated to the production of other produce, and thus glut the markets, and reduce the price of every species of produce to the relative standard with barley; and as more and more land would be appropriated to pasture produce, as grain depreciated in price, or was supplied by import, more labourers would be thrown out of employment, and less demand for agricultural tradesmen's productions would ensue, and less taxed articles consumed.

Hitherto we have not had such a ruinous import of barley, as of wheat, (the present price of wheat is no criterion, the cause is easily explained, but requires more space than I can spare.)

The fluctuations in the price of barley, is fatal to the speculators in foreign barley. Wheat may be stored for years without injury; on the contrary, barley is spoiled for *malting* purposes by keeping; but if foreign barley was admitted duty free, and the *duty on malt reduced one-half*, we should always have a stock on hand ready to supply and glut the markets long before barley rose to a remunerating price. We may, as an outline, state—foreign barley, 18s per quarter; duty, 10s 4d; malting, granary charges, &c. 8s per quarter; total, 36s 4d; and as malt improves by keeping, it is clear that it would become a favourite speculation; the cost would be less than wheat, and the chance of profit greater.

We must refer to history for price current, cause of price, and relative prices. The land is fenced, drained, and brought into cultivation to our hands; houses, out-buildings, bridges, roads and canals are made for us; churches and other public buildings are built for our accommodation; and blest with a salubrious climate and fertile soil, yet we are in difficulties; "one-sixth of the population are in penury," and pauperism and crime increasing. Surely all these facts must be a convincing proof that a change of policy must have led to this state of things. During the rule of the Tudors, one-half of the arable lands, converted to pasture, were forfeited to the Crown, "to prevent want of employment for the poor."

In the reign of Charles II., an Act was passed to permit the export of wheat when at or under 44s per quarter, and of barley and malt, when at and under 24s per quarter, and all other grain in corresponding terms; and this act was amended in the 1st of William and Mary, and wheat was permitted to be exported, when at or under 48s per quarter, with a bounty of 5l per quarter; and barley and malt, when at or under 28s per quarter, with a bounty of 2s 6d per quarter, and all other grain in like manner. And as the Act recites "to encourage tillage to give employment to the poor." Thus it will be seen that 28s per quarter was considered to be the lowest price at which wheat could be grown,

to profit at that remote period, that to encourage the export of one grain was useless, unless extended to all—that the price of one grain always did bear a relative price to other grain, (on an average of years,) and that malt was then at the same price as barley. The ridiculous arguments as to the duty increasing the price of barley, by enabling the maltsters to purchase, is confuted by the above facts, and the demoralizing effects of labourers being enabled to brew their own beer, never entered the heads of our forefathers. No Ministry can long rule, that advocate free trade, or that do not give *ample protection* to the productive classes; whilst the monied interest is dominant in the councils of the state, free trade will be advocated; low prices double their incomes, and the incomes of the placemen, pensioners, &c., and virtually double the National Debt, "when consumers fix prices, the producers are badly paid." The present Ministry is not an united Ministry, or they are free traders to a man. The President of the Board of Trade, Mr. Poulet Tompson, and Mr. Spring Rice, the Chancellor of the Exchequer, are both advocates of free trade; and were with Dr. Bowring, Mr. Hume, and Mr. Buckingham, spoken of in no measured terms at the late Spitalfield weavers' meeting, "a sign of the times"—"a pressure from without," (when combined with the observations of the Marquis of Chandos—with the resolution of the Cambridge Agricultural Association—of the Ipswich Agricultural Meeting—the correspondence and bearing of the "Industrial Magazine," and Central Association,) which it behoves the Ministry to seriously consider. Tories, Whigs, Radicals, Reformers, non-Reformers, and Neuters, are laying aside all party motives, and making common cause.

I am, Sir, your humble servant,  
CHARLES POPPY.

## PREPARING THE SEED FOR SOWING.

(From Sinclair.)

With a view of bettering the future crop, husbandmen have attempted, in various ways, by preparing the seed for semination, to accomplish four objects;—1. The discovery of weak or faulty seed; 2. The preservation of the seed from the attacks of vermin of various sorts;—3. The promoting of the germination and growth of future plants;—and, 4. The prevention of certain disorders, to which they might otherwise be liable. The fourth point shall be the subject of future discussion;—the other three shall be briefly considered in this place.

1. In order to detect and separate imperfect and disordered seeds, from those which are sound, and fit for sowing, it is only necessary, to pour the grain, gently, either into common water, or into a solution of salt and water. In this way, the imperfect and disordered seeds, from being lighter, are soon discovered; for they swim on the surface, and can easily be skimmed off, either when at first poured in, or every time the mass is stirred. Common water is in general considered to be sufficient; but the addition of salt is of use, by increasing the specific gravity of the liquor, and consequently bringing up grain, in a lesser degree deficient in weight. The solution should be made so strong that an egg will swim in it.

2. Steeping seed for its preservation against vermin, (as insects, birds, field mice, &c.) is principally effected, by employing some article, as train oil, stale urine, &c. that has an offensive smell, and deters them from approaching it. For that purpose, the Romans used the lees of oil, decoction of cypress leaves, juice of house-leeks, &c., and they placed great dependence on the virtues of these applications. In modern times, saline and caustic

particles are applied to the seed of barley and oats, as well as to wheat, to preserve it from the attacks of vermin, or to destroy such as may venture to eat it.

3. Attempts have also been made, to promote the germination, and the growth of plants, by steeping them in water, and other substances, with a view of securing in spring a few day's start in vegetation.

Some farmers have steeped barley in pure water, from sixteen to twenty-four hours, if it is to be sown in light soils where there is not a likelihood of sufficient moisture being in the land to promote germination; and some accounts have been published of considerable success attending that practice. It is very hazardous, however, to oversteep the seed, least it should destroy the embryo plant: and it is recommended, to roll the soil afterwards, that the moisture in it may be retained. The application of dung-hill water, however, to seed-corn seems to be still more useful, more especially if the urine of cows is made use of; but as it contains a great proportion of ammonia, no seed can be safely kept in it above an hour.

Gardeners frequently steep beans to accelerate their growth, and some farmers have found it of advantage, in late situations, to adopt this practice to a considerable extent.

They have a practice in Switzerland, of steeping the seed of clover, in common oil, for an hour or two, to prevent the attacks of insects. It should then be mixed with powdered gypsum, to promote a rapid vegetation. The same plan might have similar effects on turnip seed, and prevent those risks to which the crop is liable in its early stages. Oil is peculiarly destructive to insects when applied outwardly, as it stops up the pores of the skin, by which their respiration is performed. When taken inwardly, it is not so injurious.

#### SEASON FOR SOWING.

The period of sowing the different grains, varies so much, according to situation,—soil,—climate,—species,—and a number of other circumstances, that it is impossible to lay down any general rule, but this "That early sowing is, on the whole to be recommended." It has been found, by a number of accurate experiments, registered in Dr. Hunter's Geographical Essays, that in England, from the middle of September to the middle of October is the best time to sow wheat. It is true, that all farmers cannot complete their seeding within this time, but it is important, that they should attend to it as far as it is practicable.

On several accounts it is desirable to sow before winter, or early in that season, to as great an extent as circumstances will admit of: 1. Because, when a good deal of work is over in winter, there is less to do in the spring;—2. Because, when the seed is sown in winter, a less quantity will suffice;—3. Because, the crop will be ripened earlier, which, in times of scarcity, may prevent the calamities of famine;—4. Because, when a crop is sooner ripe, it is less liable to disease in its progress, or to injury in time of harvest; and, 5. Because, it may be possible to obtain a second crop in the course, even, of that year. This is frequently the case in Flanders, and even in England, where "stubble turnips," as they are called, are often raised.

On all these grounds it is well entitled to the consideration of the farmers of Great Britain and Ireland, whether two sorts of grain, barley and oats, commonly sown in spring, may not, to a certain extent, be sown previous to winter.

In regard to barley, the two rowed grain will not answer; but there can be little doubt that the four-rowed, or the six-rowed varieties, would succeed. The Flemish derive great advantage from the cultivation of *sucrion*, or winter barley, which they greatly prefer to the spring. It ripens earlier, is more productive, sells at a higher price, and yields a greater quantity of malt liquor, or spirits. A valuable crop of turnips may likewise be raised after it.

#### TO AGRICULTURISTS.

GENTLEMEN,—I am induced to trouble you with a few observations, in consequence of a report having reached me, that several persons have, either through enmity or ignorance, been crying down "Hickling's Prolific Wheat," saying that it is found by millers to be steely, and no better than the Rivett's, and that its productiveness is considerably overstated. Such reports have deterred some from buying the stock, and done them an injury as well as impugned the account I gave of it. The first objection that it is steely, I can positively deny as perfectly untrue. I have the testimony of four millers, who have ground some within the last three weeks, and they all agree that there never was kinder or better wheat ground, or that made more or better flour. One baker who tried a bushel, states "he never had flour that took so much water." So much for its being steely. Now as to its productiveness. It is well known that, in times like these, it requires care and caution in purchasing a new species of wheat, and its price one-third higher than other sorts; some may suppose it is a puff—others a trick to sell, and many entertain strong prejudices, that no better can be discovered than what we have. This is to be expected. Every body knows that discoveries of this kind make but slow progress; for instance, the Chevalier barley was discovered many years before its excellence was acknowledged and propagated. This was obtained precisely in the same way as Hickling's wheat; yet no one is justified in stating that which is untrue. Now it would be great folly either to expect or suppose that every person is to grow thirteen or fourteen coombs per acre. The fair way is to try it in comparison with others: this is the only true test. I believe it will not be denied that it exceeds any other from two to four coombs per acre; but so strong is prejudice, that an excellent practical farmer, who had a small field of eight acres, half sown with Hickling's, and the other with his usual stock—at harvest—yes, even when it was cut, believed his own would yield the most. It was thrashed; his cast eight coombs per acre—Hickling's THIRTEEN! Surely such proof establishes its superiority. I will only relate one other fact as to its productiveness, and let people either believe or disbelieve it; my object was to make the wheat known as an important discovery for the general good: and I am not aware of a single instance where it has failed. David Slate, Esq., of 44, Chiswell Street, London, sent two bushels to his brother in East Lothian, last season; and in a letter I had from him this day, (for twelve coombs more) he says, "I had a letter from my brother the other day, (Oct. 10) who had two of the bushels sent to East Lothian last season, and he expresses himself highly pleased with the result. He had TEN QUARTERS, TWO BUSHELS from the quantity sown as you directed, on land that had been summer fallowed." This is a fact probably never equalled, and if such will not silence the tongues of those busy and ill-natured persons, nothing will. With my sincere wish for your prosperity and happiness,

I am, Gentlemen, yours very obediently,  
JOHN RICHARDSON.

Heydon, Oct. 22, 1835.

[We fear Mr. Richardson will lose the sale of much of his wheat this season, from the want of facilities in procuring it. We have applications at our office about it daily by persons desirous of purchasing for seed, but there being none in London they go away disappointed.—Editor of Mark Lane Express.]

# REMEDY FOR INCENDIARISM.

(From the Hampshire County Newspaper.)

SIR,—I have frequently addressed you on agricultural subjects, and on the apathy of farmers to the dangers and ruin by which they have been long surrounded. The present alarming period, however, imperatively calls on every man of sound mind and body to take a decisive part in endeavouring to stem the torrent by which the whole race of farmers is threatened to be swept away. I may be told that farmers should meddle not "with things too high for them;" that they should never think on public matters; that they should stay at home, and sedulously follow or watch their own plough. This sage advice might have been attended to in my grandmother's days, when equal justice was dealt out to all; when men could live by their industry, and by prudence lay by a comfortable provision for their rising families; and when they might retire to rest at night, without being haunted by the fear of roasting in their beds before morning. But, Sir, now that we, oppressed as we have been for so many years, suffering under the withering effects of *partial* taxation, both local and general, and every hour in danger of perishing ourselves, and losing our property by the torch of the midnight incendiary, it is high time this centenarian cry was disregarded; and seeing the old proverb—"If you don't take care of yourself, no one else will"—fully realized, that we shake off that culpable lethargy I have so often (too unsuccessfully) railed at. If no leaders can be found from among the ranks of the landed proprietors, let us endeavour to find some few among ourselves, who, although wanting the art of oratory in delivering polished nonsense to a gaping multitude, possess a determination to assume a resolute attitude, or ability to carry measures necessary for self protection into effect.

Our first step should be to adopt measures for the purpose of extricating ourselves from the miserable state of anxiety and danger we are continually in from the spirit of disaffection which has been so long abroad, and which is, and I am convinced will, if no better remedy than the new Poor Law Bill be applied, be daily increasing.

As a preliminary step, I would recommend a deputation of some dozen farmers to wait on our County Members, one of whom is no stranger to the present Ministry, and urge upon them the necessity of some instant measures to eradicate the fiendish spirit of incendiarism. In the multitude of council there is wisdom; and I should be happy to bow to any proposals of my brother farmers, which, on mature consideration, shall appear better calculated to accomplish the desired object than any suggestions of my own; but I am so thoroughly satisfied that this diabolical spirit might, in a short time, be utterly annihilated by carrying into effect two measures of justice, that I would venture my own neck as a ransom for any incendiary fire which should occur at the hands of a farm labourer, at the expiration of two years from their adoption; these measures are simply—UNIVERSAL Employment at present wages, and REPEAL of the MALT TAX.

With reference to the first, the Poor Law Bill provides none; it gives guardians no power of discriminating between honest poverty and wilful idleness; the offer of a certain amount of relief, or the work-house, is made to ALL applicants, which, miserably small as the pittance is for the really indigent, is too much for his often companion, the imposing vagabond, who will take to

his heels the moment you talk of work. Employment is the ground on which the bill should have been founded; it would then, with the expulsion of some of its most obnoxious clauses, have been a measure of justice. Some may ask, why do not the farmers employ the superfluous hands? I answer, because they are at last beginning to see that as long as they are simpletons enough to employ every hand Peel's Bill has brought to pauperism, their last shilling will be expended before they get any relief. Why should the tenantry be called on to employ more people than their business requires, while manufacturers, traders, and the gentry, are exempt from the burden? Or why should landed property, which, in many instances, has been nearly devoured by the spoliation bill of Peel, be compelled to support, exclusively, the ever accumulating mass of paupers? Justice dictates that the superfluous unemployed should be set to work through the means of a general fund, derived from every description of property, in equal proportions. Indeed, had farmers the inclination, they have not the power, to continue to bear this burden, as will appear from the following table, extracted from an article addressed by me to Mr. Spring Rice, in July last, which is to be found in the *Farmer's Magazine* for August:—

|                                               |     |    |
|-----------------------------------------------|-----|----|
| Farm, 500 Acres Arable, annual produce, say:— |     |    |
| 80 Acres of Wheat, 6 sacks per acre, at 18s   | 432 | 0  |
| 100 ..... Barley 8 sacks at 12s 6d ..         | 500 | 0  |
| 40 ..... Oats 10 sacks at 10s.....            | 200 | 0  |
| 60 ..... Grass at £3 per acre.....            | 180 | 0  |
| 25 ..... Sainfoin at £4 5s per acre.....      | 106 | 5  |
| 70 ..... Turnips fed .....                    | 0   | 0  |
| 60 ..... Vetches fed .....                    | 0   | 0  |

Loss, ..... £ 206 18

Observations follow this statement which space will not allow to be introduced here, and I must therefore content myself by challenging either the Chancellor, landlords, or landlords-lawyer-stewards, to controvert the facts in any material point. It will be granted, then, that farmers would be only fit inmates for St. Luke's were they to attempt employment for labourers with such a prospect before them, beyond what they actually want; but I strongly contend that employment ought to be afforded by some authorized parochial or government agents, for every man willing to work; labour is the poor's man only property; its value is no more than a bare sufficiency for food and raiment with which the Giver of all good has commanded man to be content; but he has also said, "man shall live by his labour." This property, then, is as fully entitled to protection as that of the richest Jew in the land; but how wide the difference in the protection afforded!

Next comes the repeal of the malt tax. All the good effects to be expected from constant employment will be nullified, unless the labourer can obtain that necessary for life, beer, without being driven for it to the beer shop, or public house. The revenue ought no longer to be raised at the expense of the souls and bodies of the population.

We know, the malt tax repealed, that beer houses, gin palaces, spirit licenses, and all the taxable connection must fall. Oh! what a fall is there, exclaims the Chancellor of the Exchequer. But, Sir, the pure spirits of heaven witnessed not with more joy the expulsion of rebellious Satan, with his warring crew, from the celestial regions, than virtue, morality, religion, and good government, would hail the downfall of these many-headed monsters; from their ashes would arise a more beneficial change in the disposition of the people than all the power of precept, bayonet, or scaffold, will ever be able to produce.

I care not what measures of vigilance or coercion are introduced—with however great diligence the enactments of the Poor Law Bill may be enforced—with whatever subterfuges the real evil is sought to be avoided; all, all, will fail, unless the labourer is employed, and the temptation to expend his earnings in sinks of vice and infamy removed. That the farmer cannot provide the former I think is manifest; but the legislature can, and ought immediately to attempt both. By refusing employment, we first render the labourer unhappy. The transition from this state to disaffection is short; and shorter still from disaffection to desperation. Here we make the fuel, and the beer shops and drinking houses are the torches which set this fuel in a flame.

Let me, then, through the instrumentality of your journal, desirous as I hope you are for the comfort and welfare of this agricultural county, endeavour to rouse my brother farmers from their lethargic slumbers, by calling on them, deserted as they are, boldly to face the danger which besets them; to make a determined plunge from their trammels, and be no longer the pivot on which the screw of oppression, both democratic and aristocratic, turns, and under which all must inevitably perish, unless assistance be shortly afforded.

The duties of Parliament are now in abeyance. Now is the time for concocting plans to open the campaign in the spring, should no urgent circumstances call us together before. Let a retrospective view of the last 15 years be taken, and where is the man who can deny that distress among the farmers—misery among the poor—distrust, dis-

affection, and crime, among the community in general—have gone on increasing? Does it not, then, behove the people, the reasonable, intelligent, state-supporting, middle classes, constitutionally to insist that the public time be no longer wasted in the furious strife of Whig and Tory for power, while the interests of agriculture, the mainstay of the nation, are going to pieces upon the rocks of a disorganized society? Let the farmers lay down the broad sword, and take up reason; and instead of wasting their time in defending abuses which are about to engulf them in one common ruin; let them call for a parley, make known their complaints, and peaceably, yet firmly, *insist* on a hearing, for which purpose I shall be happy to make one humble instrument, and to communicate with any *practical* farmers, by way of a beginning, to form the nucleus of a society, having for its object relief from the burdens which oppress us, and more especially the attainment of the points to which I have alluded—UNIVERSAL Employment and the REPEAL of the MALT TAX.

Possibly I may be supposed to have formed exaggerated notions of the mischief which surrounds us and the country, in its fancied security, and some may smile at my apprehensions. Time, the great expeditor, will decide. Nothing would please me better than to acknowledge that I was wrong; that indifference by farmers to passing events was justified; and that the dangers apprehended were but the chimaera of my brain.

I am, &c.

FAIR PLAY.

Whitchurch, Oct. 8, 1835.

#### REPORT OF THE LIVE STOCK AND AGRICULTURE AT SWAN RIVER.

RECEIVED FROM HOBART TOWN, BY THE LAST ADVICES OF THE 12TH OF JUNE.

The number of acres employed in the growth of Wheat are 546; in that of Barley, 100; ditto, Oats, 116; Kaffre Corn and Maize, 29; in that of Potatoes, 15; other crops, 94; fallow, 118; Vines, half an acre.

We have 84 horses; 78 mares; 307 cows; 95 working cattle; 97 steers and bulls; 3,545 sheep; 492 goats, and 374 pigs. Amongst the horses we must remark, that we have some of your own thorough-bred English stock, namely:—*Grey-Leg*, and *Chateau Margeaux* and four mares, and the horse *Napoleon*; two cart horses of Mr. Bull and Mr. T. W. Hardley, and Mr. Peel's *Punch*. Of cart mares we have of Mr. Brockman's, two; of Mr. Bull's, one; Mr. Lennard's, two; Mr. Lewis's, two; Mr. Phillips's, one; Major Nairn's, two; also Mr. Smith's fine half-bred mare.

Of cows and bulls we possess a good many of the fine English breeds, and even short-horns, Yorkshire, Durham, Alderney, Ayrshire, &c.

Of sheep we have the fine ewes and rams imported from Saxony by M. M'Dermott, at a great expense with their descendants; and the pure merinos from the flocks of the late Mr. Joshua Trimmer and others. It is gratifying to know, that the good breeds of the stock above-mentioned bear such a proportion to the inferior that have been, and may be imported from the neighbouring Colonies, that we have, within ourselves, the foundation for an unlimited number of first-rate horses, cattle, and sheep.

Of wool the small quantity hitherto exported has been, of course, of a very mixed description, and much of it very dirty and badly packed, from obvious causes; it appears not to have fetched in the London market more than 2s 2d per lb. The clip of the present season may be rated at about 5,884 lbs, and we are happy to say that a large proportion of it is fine, and that much more pains have been taken with it than formerly.

## SEASON FOR SOWING.

*(From Sinclair.)*

As to oats, autumnal sowing is strongly recommended by its success in Ireland. The plan is not calculated, however, for cold or poor soils, but in rich and fertile land, there can hardly be a doubt of its success. The oats should be sown in September, or the beginning of October. As the crop will tiller in the spring, about half the usual quantity of seed will be sufficient. This practice answers best in a dry soil; but where moisture is likely to be injurious to the crop, the furrows should be gone over by a plough, without a mould plate, and the mould or loosened earth, should be thrown, by spades or shovels, upon the land sown with the oats. If the crop is too luxuriant in spring, it may either be cut with the scythe, or fed off with sheep, in the months of February or March. This is of use to the crop, though it may retard the ripening. But after all, it will be a fortnight or three weeks earlier for the sickle than the spring sown, and the produce will be more abundant. If possible, seed should be procured from a crop that had been sown in winter, as such oats will produce plants of a hardier nature, than could be obtained from spring-sown corn. The Tartarian oat, as being of a sort peculiarly hardy, has been strongly recommended for trying the experiment.

## SOWING BROAD-CAST.

The most advantageous mode of depositing seed in the ground, and of covering it afterwards, is one of the most interesting subjects of agricultural inquiry. It has of late attracted particular attention, and has been discussed, not only in various publications, but at numerous meetings of intelligent practical farmers. It may be considered under three heads.—1. Sowing broad-cast;—2. Drilling;—and, 3. Dibbling.

Sowing broad-cast.—This mode of sowing, was originally almost universal. It is still very generally adopted in many districts in these kingdoms, and is the usual practice in the greater part of the Continent. To execute, however, the process well, is attended with much difficulty; nor is it possible, from any description, to form an idea, of the measured step, the regular handfuls, and the artificial cast which the sower requires, and which can only be learnt, by inspection, imitation and practice. A skilful and experienced sower, regulates the prescribed quantity of seed to the acre, with wonderful precision, and distributes the seed over the ground, with the most exact equality. It is often however, very imperfectly executed: and even where it is done well, it must depend upon the subsequent operation of harrowing, whether the seed is deposited at the proper depth so as to germinate with advantage.

It is objected to this process, by those who have adopted a more correct one, that it is slovenly; that it is difficult to conduct it properly in windy weather, that the seed is placed at unequal depths;—that a very large proportion of it is either left but thinly covered, or is sunk too deep in the soil;—that a heavy loss must be sustained, from the quantity that is exposed to the attacks of birds, and to the injury that may be sustained from great droughts, or severe frosts—and that unless skilfully done, a part of the ground may remain unoccupied.

Notwithstanding these objections, the broad-cast system has continued to prevail in various

districts, not only on account of its simplicity, and its requiring less expensive machinery, but where the climate is unfavourable, or the seasons unusually backward, from the expedition with which it is executed, and the greater certainty of affecting the object in any season. Indeed, where the climate is unfavourable, any additional time and labour required, more especially during the seed process, are very important considerations to farmers. Their establishment of men and horses, (the heaviest of the charges on agriculture), is economically proportioned to the work of the whole circle of the year; and, independently of all other considerations, the sowing by the drill, requires more time than the surface sowing.

Instead of sowing broad-cast by the hand, machines for that purpose have been invented. By them, the corn is delivered with great regularity, from a horizontal trough, ten feet in length, by brushes, upon a turning axle, worked by the rotation of the wheel of the machine. The most improved kind that has two wheels and is drawn by a mule, or light horse in shafts. A great saving of seed, and equable sowing, result from the use of this implement. Such machines are likely to be particularly useful for clover, and other small seeds, which are distributed, by the hand, with more difficulty.

After the seed has been deposited on the surface, there are two modes of covering it: 1. By the harrow; and 2. By the plough.

1. Harrows are of great use, not only for pulverizing the soil, and clearing it of weeds, but also for covering the seed after it has been sown on the surface. Of late, the form of this implement has been greatly improved. Still, however, the seed cannot be so advantageously deposited as under the drill system.

2. In the greater part of England, where drilling does not prevail the seed is not harrowed but ploughed in, or covered by a furrow. This is often done on light soils, by a light one horse plough, immediately after the seed is scattered over the surface. But in many of the heavy soils of England, the seedsman follows the plough, scattering the seed by hand, in trenches of each furrow, as they are successively formed, (called straining in, or spraining,) and on the return of the plough, the seed is covered with earth. As a preparation for this plan, the land is commonly fallowed, and cleared of weeds; it receives, where the process is properly conducted, five summer ploughings, the three first to the depth of seven inches, and the two last shallower, sufficient to bring into a completely pulverized state, a quantity of mould for covering the seed, as soon as it is deposited. The bottom contains from four to five inches of comparatively firmer texture; but yet considerably tempered, on which the seed may rest. It is thus inserted at a proper depth, and deposited on a bed, the most congenial that can be devised to promote germination, and the most favourable to its first efforts of growth. The substratum gives an admirable anchorage for the roots in the soil, and the fine earth by which it is covered, gives the least possible obstruction to its upward shoots. It is likewise protected from being root-shaken by frost, and from all those depredations which are made upon seed sown on the surface, and afterwards merely harrowed. By this method of preparation, therefore, many advantages are obtained, and a crop so conducted, may reasonably be expected, to be both luxuriant in growth, and abundant in produce.

# REMARKS UPON THEORIES ON THE FAILURE OF POTATOES.—By MR. TOWERS, Author of the Domestic Gardener's Manual.

(From the Quarterly Journal of Agriculture.)

The failures in the potato crops of these last two or three years require some remarks, in consequence of the stress that is laid upon the subject in the Essays presented to the Highland Society, and published in the last number (xxix), of their Transactions. In the general summary, page 45, there are some very pointed and interesting observations; one of which, at page 47, possesses peculiar interest: it is as follows:—"The potato," says Mr. Anderson, "lying in the ground during the winter, becomes perfectly matured, retains its juices, is preserved from fermentation, and germinates at the natural season; and we have found that the plant proceeding from it is luxuriant and healthy."

Of this fact there can be no manner of reasonable doubt; every grower must have observed that he cannot clear his ground from tubers, some always remain, and these germinate at different periods of the spring, according to the climate and temperature of the place. We are but too apt to pass over facts and phenomena in matters of ordinary occurrence; but whoever will be at the trouble to investigate those sprouting tubers that have been left in the ground during a winter, perhaps two, will be taught a lesson of the mode in which the potato germinates. Such stray tubers may indeed be wounded by the fork, or cut by the spade at the time of the general autumnal digging; but they usually are found to be entire. I have recently had occasion to take up a very considerable number, and, with scarcely any exception, have perceived that the protruded shoots emerged almost exclusively from the crown or rose-end, where there are about four or five buds or eyes collected in a small compass. This end, the one opposite to the root, or that point by which the tuber was connected with the parent plant, is, in common with vegetable bodies in general, the soonest excited, and the shoots protruded from it are the earliest shoots. Owing to this circumstance it is that when frosts, during the early spring, destroy the first shoots, the plant recovers and produces others. It is not that the same eyes push again; but, as in the case of trees, the excision of a leader by the pruning knife, causes lower buds to break, so the loss of the primary shoots of the tuber (which in fact is not a root, but, as now admitted, a species of underground stem,) leads to the production of new shoots from the lateral eyes. This remark leads us to consider the advantage or disadvantage of planting entire potatoes. The learned secretary to the Horticultural Society of London has recently undertaken a series of minute experiments; and the results are published in their Transactions. By these reports, it appears that sets produce a comparatively greater yield of potatoes. Of this simple fact no one can doubt who has witnessed the culture of potatoes under a variety of modes of planting, and for the obvious reasons that, if the leading primary shoots from an entire tuber advance uninjured, the lateral eyes rarely push at all; but then, though it must be admitted that one whole potato will not produce a yield equivalent to that which the eyes of the same tuber would produce, if each were cut out and planted separately, yet the yield is greater and better by far than it would be from any single eye, the safety of the crop is more efficiently secured, and the chance

of failure, even in one solitary instance, almost completely obviated. If seed be scarce, potatoes must be cut into sets, but if it be abundant, the small extra cost by the purchase of whole tubers, is more than covered by the excellence of the yield, and the security of the crop. Before I proceed to state my idea of one certain cause of the failure of a plantation, I must remark, that on every ground of philosophy, tubers cannot be too ripe: nature, by the evidence of the certain germination of stray tubers, as wisely noticed by Mr. Anderson, confirms this theory. Again if cut sets (with two eyes at the least) be planted, it is extremely doubtful whether any advantage has ever been derived from suffering them to become hard and dry. Some persons to obviate the loss of time, have recommended the application of powdered air-slaked lime to the recently cut surfaces; but I think there may be danger in this process, and would advise the use of gypsum or plaster of Paris as a substitute. This is a neutral salt of lime, possessing no corrosive properties, but merely an affinity for water. A very thin coat of this substance would form a secure covering, if any be needful, without danger of effecting decomposition; but if the tubers be thoroughly sound, I conceive that no application need be made, as nature proves that a potato cut by the spade, in the ground, never becomes rotten, or fails to germinate.

Among the numerous reasons ascribed for the late failures, the most forcible and conclusive appear to be those which embrace the question of injury to the tuber, which causes rottenness of the parenchyma. But all the causes of injury are not enumerated, and one which I have repeatedly urged, though not in this Journal, is not in any way alluded to. The external coating (*epidermis*) of the potato is extremely susceptible of injury from two very opposite agents, *heat* and *cold*. At one time persons were recommended to prevent the germination of the eyes by immersing the tuber for a single second in scalding water; it was stated, that potatoes so heated would never sprout, but be found good for the table throughout the spring and early summer. I tried this scheme, and though I perceived no immediate effects, I, in a week or two, discovered that the pulpy substance to the depth of 1-16th of an inch below the skin, became soft, pappy, and then advanced rapidly to decomposition; in fact, the cellular substance was seriously injured, and the vital preservative principle destroyed: so much for the vague *dictum* of a visionary wild hypothesis. In 1833, while gathering the remains of a fine crop of many new varieties which I had been favoured with by the President of the Horticultural Society, and a Cornish variety received from a distant county, I had collected the whole into separate heaps to dry and harden. At 5 or 6 p. m. the digging and separation were finished; about 7 p. m. the thermometer had fallen to 2 or 3 degrees below the freezing point, but alarmed by the rapid decrease of temperature, I had hurried the different parcels under cover. However, some time was lost, because it was needful to secure each parcel apart, in order to register the numbers. Many of the parcels were secured before rime appeared upon the grass, but others were exposed too long, and frosty particles glittered upon the skin. I thought no more of the circumstance at the time; and in fact, the cause of alarm existed for a very short period, for the evening became cloudy, and the frosty appearances vanished before 10 p. m. However, when we came to examine the different numbers in March 1834,

many were found injured, the skin soft, the mass pulpy and loose, and exactly resembling that of the scalded potato.

Now, it is certain that slight frosts occur frequently at the end of October, and through the course of November; if then, the potatoes be exposed, some must be attacked, and sets taken from such potatoes are very likely to decay in the soil. I do not mean to assert, that disease may not have prevailed in consequence of other causes in a few districts; but of this the reader may be assured, that one certain cause of decay may be traced to frost; and, therefore, it is the duty of every planter to be on his guard, and always to have fern, litter, mats, or some protecting materials at hand, in order to cover the heaps, whenever the evenings threaten to prove severe.

In reference to *radical secretion*, the potato perhaps approaches to an exception; as it can be proved, that the same spot of ground has been cropped with the tubers, for many successive years. The same thing may be asserted concerning the onion. May not these facts lead to the surmise, that if any seed-bearing crop produce fibrous roots only, the exuded fecal matters are deposited in the soil; whereas, if bulbs or tubers be formed, the descending laborated fluids are appropriated to the formation of those processes? It is certain that all edible roots (as they are termed), whether they be tuberous, spindle-shaped, or bulbous, are highly sapid, and abound with the peculiar aroma of the plant: fibrous roots are usually insipid, or at least they yield little else beside vegetable extract, void of specific flavour. The subject requires strict attention, for it may lead to many interesting results; however, though successive crops of tubers and bulbs may be produced on the same land, yet I believe they are found to deteriorate after a time, and therefore ought to be alternated occasionally with others which have a system of merely fibrous roots, in order to afford the land every chance of retaining itself in full condition.

### CREDITON PLOUGHING MATCH.

On Monday, Oct. 2, this interesting trial of agricultural skill took place in a field called Higher Winshort, on Jews Hollacombe Barton, the property of Mr. Daniel Tremlett. The field was a piece of lay, about 13 acres. The work commenced about ten o'clock, there being 17 ploughs, of which 12 were driven by men and 5 by boys. The Judges were Mr. Upham, Combe Lancy, Sanford; Mr. James Francis, Shute, Shobrook; and Mr. Thomas Herring, Creedy, Newton St. Cyres. There were a number of persons present in the course of the morning amongst whom were J. W. Buller, Esq., J. Sillifant, Esq., and many of the neighbouring gentry.

The work ended at one o'clock and was pronounced to be very well executed.—The whole party then returned to Crediton. The committee were indefatigable in their attention to the various duties devolving on them. They had determined that the first man of each class who gained a prize or premium should have a testimonial to that effect from them. These were framed and glazed, being written on ornamented cards in an admirable manner by Mr. T. Brown, the Secretary. To the apprentices were also presented written unframed cards. A substantial dinner was provided for the ploughmen and boys. —The large room at the Ship Inn being got ready,

about 120 sat down to an excellent dinner, J. W. Buller, Esq., took the chair, supported on his right by Sir H. P. Davie, Bart., Rev. Mr. Russell, Rev. Mr. Manley, &c., &c.; and on his left by John Yard, Esq., John Sillifant, Esq., B. Cleeve, Esq., Rev. Mr. Gregory, T. Pring, Esq., J. Davy, Jun. Esq., &c., comprising the wealth and respectability of this influential district. Mr. Wm. Ward, Langridge, was the Vice-President, supported on either hand by Mr. Reynolds, Uton, and Mr. Richard Brown, Dunscombe.

The President, after the usual toasts, in an able address, proposed "Success to the Crediton Ploughing Match Association," which was drank with the greatest enthusiasm.

The Secretary read the list of prizes as follows:—

#### FOR MEN ABOVE 21 YEARS OF AGE

|                                                                                                                   |   |    |   |
|-------------------------------------------------------------------------------------------------------------------|---|----|---|
| Best prize, 2l in money, and a hat and a coat value 2l, to S. Horrell, ploughman to Mr. Partridge, Goldwell ..... | 4 | 0  | 0 |
| Second ditto, to J. Jackman, ploughman to Mr. Lee, Keymelfords .....                                              | 2 | 0  | 0 |
| Third ditto, to John Spear, ploughman to Mr. Tucker, Westacott .....                                              | 1 | 10 | 0 |
| Fourth ditto, to J. Lock, ploughman to Mr. R. Browne, Dunscombe .....                                             | 1 | 0  | 0 |
| Fifth ditto, to R. Turner, ploughman to Mr. Mr. Norris, Trapp's Farm .....                                        | 0 | 15 | 0 |
| Sixth ditto, to J. Hutchings, ploughman to Mr. Francis, Moor .....                                                | 0 | 10 | 0 |

#### FOR YOUNG MEN UNDER 21 YEARS OF AGE.

|                                                                                                                                                                                                                                                                                                                          |   |    |   |

Also five shillings each according to the discretion of the committee, to eight male and female parish apprentices who have faithfully served out their times, and whose indentures expired between Michaelmas 1834, and Michaelmas 1835, on their producing from their masters certificates of their having done so, with a character of general good conduct.

The President, on the successful competitors being called forward, delivered suitable addresses to them, amidst great applause.

Several songs were sung, and the evening passed off in the most convivial manner.

## HOP GROWING, &c.

TO THE EDITOR OF THE NORWICH MERCURY.

The following correspondence will be found generally interesting; the remarks contained in it being applicable to many other counties in England besides Norfolk, to which it is especially directed.—*Edit. Farmer's Mag.*

SIR,—In compliance with my promise I will now relate to you the substance of my conversations with the Kent and Surrey hop growers, first observing how very politely they behaved to me, though an entire stranger to most of them; and how readily they answered the questions I put to them concerning a cultivation for which they have so long been famed. My object in introducing the cultivation of the hops into this county, as I mentioned in my last letter to you, is to find a profitable employment for the surplus labour of my parish, and being aware that none of our workmen here were acquainted with the nature and cultivation of that plant, I thought it requisite to visit the two celebrated counties of Kent and Surrey myself, and there collect all the information I could, so as to become competent to instruct those under me in my young hop garden. Having spent nearly a month during the last and this year inspecting the performance of every department of the work, I started this spring on my own ideas of the proper treatment of this plant, having received no very satisfactory system from any one whose gardens I visited. I have selected from my memoranda the answers to my several questions of a grower of many years' experience, and a person upon whose good intention to assist me in this, my new undertaking, I could place the greatest reliance. I will now give you them precisely as they occurred.

Is there any one soil more suitable to the growth of hops than another?

The condition of the soil has certainly much to do, not only in the quantity, but quality. I cannot say I know what the precise nature of the soil should be, as there are frequent instances of the finest hops growing in very indifferent ones. Clays, black gravels, peats, and sandy loams have all produced good crops.

Is not depth of soil, be it what it may, absolutely indispensable, particularly in a dry season?

Undoubtedly.

Do you consider the hop gardens in Kent and Surrey generally moved deep enough at first?

Certainly not, the expense deters many from doing so.

Would not the plant require less manure if it had a better ability given it to extend its roots in search of food, in a deeply moved soil?

Perhaps it might, but we like to keep the roots as near the surface as possible, though the soil be ever so deep.

Then pray for what purpose had this long-lived hardy plant the power given it, of such an immense extension of root as you have just now shown me at the bottom of the *rag stone* pit, which was certainly twenty feet deep or more? Does not the inclination of the plant seem to be to place its root out of the reach of the sun's influence or Winter's cold?

It does indeed appear natural to the plant to extend its roots in the manner I see you would encourage it to do, to avoid the frequent changes of the surface temperature—but I do not feel positive that we should obtain either so great a crop, or hops of so good a quality, by allowing the plant to grow more in conformity with its native wild habits. This then remains to be proved. I think it does.

Is not shelter from South-west winds necessary.

Yes—for this wind is apt to bruise the hop during its passage up the pole, and even as late as at picking time it injures the hops themselves.

Are the set or plants cut properly with 1, 2, 3, 4, or 5 eyes indiscriminately, as potatoes formerly were?

They may not be, although I never regard the number of eyes if I have but two good ones.

Will not a cutting or set, with five eyes or joints close to each other, break at two or more of them?

Very likely it may.

And will not a weaker bind appear in consequence of this?

Yes—and on reflection I should think one joint or pair of eyes would be better than two?

And do you not suppose that the eyes which are cut at for next year's growth are smaller and weaker than if the plant had made but one break the first year?

They may be, but we never study the subject so closely as this—the hop is such a weed it grows any how.

Now supposing two eyes only broke of a five-jointed cutting, the one at the top and the other at the bottom of it, if the crown of the plant be kept level at the next spring's pruning, the lower shoot must have several more pairs of eyes than the upper one—will not this be the case, and if so, would there not be a great inequality from such irregular work next summer?

I must confess I never noticed the consequence of starting with one or more eyes the first year, but what you say seems founded on common sense, and I think you have been a hop-gardener before.

No—I am as yet quite unacquainted with this branch of cultivation, but having been fond of gardening in general all my life, I may perhaps possess greater advantages towards acquiring a more perfect knowledge of this subject than can be expected from an entire stranger to horticultural pursuits. I have made the vine one of my particular studies, and I think I see a great similarity between this fruitful and hardy plant and the hop.

How many bedded sets or plants do you put into one hill?

Three or two, if very good, will make a strong hill.

How many cuttings do you put into one hill?

Five.

Why so many as five?

Because I do not expect all to strike and live.

Does not this uncertainty arise from the careless manner in which the sets are cut?

Perhaps it may, but the wire-worm frequently destroys some of the plants, so we like to put in a few too many for them.

I understand you—just as a young gardener sows his early peas too thick, to allow some for the mice.

Pray observe this cutting—the boy has cut through both the top eyes; they are destroyed, are they not?

Yes—but the others below will live.

So then, you have four inches of this wood above your two lower sound eyes to rob them of the sap—have you not?

I was not aware that the food belonging to the lower eyes would pass them to feed those at the next joint, but I suppose you are right.

It certainly would in this case only attempt to do so, the buds having been destroyed; but you must have observed this principle daily, that the buds on all shoots break at the extreme ends first.

It is evident in almost every plant in nature—even the potatoe breaks first at the crown end, leaving the eyes behind dormant, and just in such proportion as those eyes furthest from the natal part are removed, so the backward ones will break to the very last.

You said you planted two bedded sets in one hill, these you know will both live, so that I may suppose you would only wish two of the cuttings out of the five to do so?

Two or three would be enough, if strong ones.

Did you ever try *one plant*?

Never.

Why not?

Because I should perhaps lose two or three years; my hills would not be strong enough to throw sufficient bind for a crop.

I must differ with you on this point, for I consider your two or three plants but parts of plants, crippled in every way, entangled head and root. Collectively they may produce more for the first few years than a single one can—but I think we shall live to see the day when every hop planter in Kent will have but one plant in a hill.

Did you ever try one cucumber or melon against the old-fashioned number of three in a hill?

No—I know little or nothing about cucumbers and melons, but I should not consider them at all analogous to the hop.

They are not precisely, but sufficiently so to suit my argument, that one plant of any sort standing alone will far surpass in produce any other number, the single one being entire and perfect, and the others but distressed parts of plants. Well, whether one or more sets be planted, do you not think that if there were greater pains taken, that a year's growth would be gained by introducing a finely prepared soil to receive the infant roots, instead of the rude clods usually in close contact with them?

We never expect either plants or cuttings to make much show the first year.

No, not as you at present plant them; but I repeat the question—do you not think a finely prepared soil being brought to each hill, would perhaps gain a year or more in growth?

Certainly I should expect a greater growth, but I fear the expense would be too considerable.

I am sorry to hear a word about expense from a Kent hop-planter; if one of our turnip farmers cried out I should not be so much surprised. When I have the pleasure of seeing you again, I shall prove to you I think that my cuttings will

have paid for being well nursed, for certainly I shall plant them in the best prepared soil I can make.

I shall be pleased to hear the result of your nicety in planting.

Do not you Kent gentlemen prefer what is called a bedded set—that is a rooted plant of year to a spring cutting?

Many do.

Why?

Because it is sure to live, while we always doubt the certainty of a cutting, and besides we imagine we gain a year by planting a bedded set.

Do you not think that in the very act of taking up these bedded sets, destroying all the roots as you must, that there is much mischief done to them?

No—they will make new fibres immediately on planting; we always trim off all the last year's roots.

Then, in short, you actually begin with little better than a cutting?

No—we still consider a bedded set, divested as it may be of its roots, preferable to any cutting, because we have proved it will strike.

Can transplanting in any case be right? Is not every plant, from the oak to the lettuce, checked and injured most materially, by losing its first roots?

Perhaps so—but as I said before, the hop is such a weed it grows any how.

So I observe—but though such a weed, I fancy it is still susceptible of a kinder treatment than has yet been shewn to it, and for which I think I shall find it grateful.

Do you not agree with me?

I am only afraid you would make it too luxurious.

I am aware that coarseness of bind must be avoided, but the strength I should give it would be natural, which seldom leads to coarseness. I am not for intoxicating the plant with old London rags and dung after it is once well established. I only wish to see more assistance given it in its infant state, and I think it would run alone the stronger and sooner.

Well, I suppose it might; but the expenses you will incur with all this nicety will ruin you.

I think otherwise; I have never yet found any cultivation that did not pay for doing properly. My maxim has always been, “do it well or not at all.”

Very true; I sometimes think we might make improvements, and among others getting rid of the blight of all sorts; that would be the job for you to undertake.

Aye, indeed it would, and I fear a very difficult one, for unless I had the entire control over the elements, I should fail in attempting to arrest the ravages done to the hop by the innumerable vermin that infest it.

Now allow me to ask you when the binds appear above ground, does the person about to weed the surplus and tie the proper number to the poles, know from which of the plants the binds proceed?

No.

Then may he not select too many from one plant, and too few from another?

I never thought of this before—but it must be so.

And may not the unevenness often to be observed in a hop garden be caused by thus working in the dark? May not the weakness of one pole

be attributed to its having too many binds belonging to the same plant, and the coarseness and fruitless state of another to the opposite cause? the first having too much and the second too little work to execute.

I should not be surprised if this were the case.

Should I not get rid of this difficulty if I had but one plant?

I think it probable, but as I said before, time, and consequently rent and taxes would be going on, while your single plant was gaining power to form a strong hill.

Then time must prove my experiment?

Just so.

The binds having reached the height of eight or more feet up the poles, is there not a practice among some (I believe many Kent growers) called shredding, that is, tearing off at one cruel stroke with the hand, all the laterals and primary leaves, with five or ten inches of bark at the same time?

Many do this.

I have seen it performed, and was quite astonished that any plant, however hardy, could be so cruelly used. I asked the grower what was his intention for so doing, and the answer I received was, to encourage the bind to proceed up the pole. I certainly thought this a most extraordinary mode of effecting it. What do you say so?

Why, I do not know that I ever saw much harm or good done by it.

Well, I must still think it the very last way to accomplish the desired end. What! rob the plant of all its lower foliage and bark, to encourage the head. Never was there such a theory heard of, but in a hop garden. Should there be any disposition in the lower laterals to rob the head or leader, instead of taking them all off thus abruptly, I would remove them with a knife, two or three at a time, not tearing off the primary leaf and bark with them, but leaving one joint of the laterals, at which there are two buds seated; these will not break again, if the head be disposed to take off the thus enlarged supply; and in performing this operation, the planter must be guided by the increased growth of the leading joints. The lateral in the hop, as in the vine, is only the index of a surplus power, which the head cannot take, and which does not appear until the root has furnished more food than can be disposed of upwards. At the same time I am quite aware that if these lower laterals were not removed, in some instances they would entirely stop the leader, but it is with the manner of doing it, and not with the act itself I find fault. I fear you will think me opinionated on this part of our subject; but I feel myself so much at home upon the proper treatment of this lateral shoot, that I have said more perhaps than I ought.

Not at all, but the truth is, we Kent hop-growers are not so fond of experiments as you seem to be. We go on much as our predecessors have done, though perhaps we might do better.

Allow me to say, that the fact is, you are wise enough to let well alone, but in our days that will not do; we must try and make well better still.

I have now followed the cultivation of the hop with my friend nearly as far as harvest, for there seems nothing to be done in the garden, but to keep it clean from the time the binds are up the poles, until they are severed from the hill, and given up to the pickers. This operation is so simple, that I need say nothing about it—besides,

almost every one has witnessed the merry and interesting scene. The drying and bagging are also simple processes; of course, like every thing else, they may be done well or ill; but let us once grow hops in our county, and there will be no fear of preparing them properly for market.

If I have trespassed too far on your liberality, in allowing me to occupy a space in your paper of this week, you must forgive me, and attribute it to the interest which you have exhibited in my new undertaking, and for which I again return you my sincere thanks. I am happy to say another, and a very spirited horticulturist, is about to commence the formation of a hop ground at Dereham. Mr. Ward, who has already shewn such ability in the culture of the vine, has selected a very sheltered and appropriate spot, and I do not doubt his success, indefatigable as he has already shewn himself in many other departments of gardening.

I remain, My dear Sir, yours very truly,

RICHD. CRAWSHAY.

Honingham, Sept. 3rd, 1835.

### TO RICHARD CRAWSHAY, ESQ. HONINGHAM.

Sir,—Fully concurring with you in whatever may benefit so deserving a class of men as the Norfolk farmers, I beg to contribute what knowledge I possess as to the probable growth of hops in this county, and as far as soil is concerned, I see not the least obstacle—the Kentish growers are totally indifferent on this point—they grow them on every kind of soil that county produces, but not so as to situation, being generally near large towns, hence so many hop gardens near Canterbury and Maidstone, and this evidently arises from the quantity of manure annually required. This great demand for manure would be fatal to a Norfolk farmer, who if he robbed his other land for his hops, would probably suffer more than the farmer of any other county. Again, it is evident so many hops are grown in Kent, because that county abounds with woods, which woods are cultivated solely for the poles, and pay better than any other produce of the woods. The sweet chestnut is the most valuable, being the most durable; how far Norfolk can produce sufficient poles, I am unable to say.

Being on the subject of introducing something new, perhaps nothing would tend more to the benefit of the Norfolk farmers than the introduction of the Devonshire dairy system, especially as they feed their cows so entirely with turnips; probably you are acquainted with it; but as possibly this may be read by the generality of Norfolk farmers who are not, you will excuse the liberty I take in stating this method for their perusal. I believe it is allowed on all hands that the butter of that fine county is the best in England; it is brought weekly more than 200 miles to London, and there fetches a better price than any other. And what will the Norfolk dairywoman say when I tell her they have neither churn nor copper? The method is this—the two meals of Monday's milk are on the Tuesday placed over a clear fire till they begin (as they call it in Devon) to pimple, *i. e.* till all the cream has arisen, which it will do when it attain the heat of 170 degrees Fahrenheit in winter, and 150 in summer. If they are heated beyond this heat the whole fails, but experience will soon teach the dairywoman when to take the pan off the fire. On the Wednesday these two meals are skimmed, and is called clotted cream,

being as near butter as may be. This is put into a flat wooden keeler, and being stirred round and round by the hand only one way, quickly becomes butter; if the dairywoman have a hot hand she uses a common bottle to stir it with—in summer filling it with cold water. The pans are all of tin, holding 22 pints each, and cost in Norwich 3s. each, but in the long are cheap, never breaking, and may be new-bottomed; the pail is also of tin, and costs 5s. 6d. Now the advantages of these utensils being tin are very great—they are in a few minutes effectually cleaned, a kettle of water, hot enough for the purpose being all that is wanted, and clean they really are, being tin. Now, the advantages of this system are three—first, certainly a greater quantity of cream, for you get it all, more especially in winter; secondly, not only the quickness, but the extreme cleanliness of the method, for it is all done in a few minutes; and lastly, the superiority of the butter—for as three days are only required to obtain the cream, and as making it into butter is so quick an operation, they make the butter always three times a week, and sometimes daily—hence its sweetness; but there is another consideration particularly worthy the attention of a Norfolk farmer—I am inclined to think it will get rid of the horrid turnip flavour—to do so in Norfolk they scald the cream, I should therefore think scalding the milk would have the same effect; having only had a summer's experience I am unable to speak to this point.

Being on the subject of new introductions, and the crop of apples for the last two years having been great, I hope to be able to introduce the Devonshire method of making cider, and it is merely method, for not one particle of any one thing is added to the juice of the apple—it is simply the expressed juice, and a most delicious liquor it is, but we can only learn the method by having the maker from Devon. Racking constitutes a great part of the improvement, which is frequently done seven times. Whoever has tasted the Devonshire cider when they have no better apple for the purpose than our own, must admit it is a knowledge worth having. How the juice is got out is no moment—its management every thing. With apologies for the length of this letter,

I am, Sir, yours very obediently, T. B.

To T. B.

SIR,—In the Norwich Mercury of last week I find a letter addressed to me under the signature of the above initials, upon three distinct subjects, viz.. Hop-gardening, the Dairy, and Cider-making. My reply to you must be short, for I feel ashamed to trespass again so soon upon the liberality of our Editor.

I am glad you think with me that we have soil in this county suitable to the growth of hops—so far we agree; but you say that hop gardens would rob other crops of their manure, because they might not be situated in the neighbourhood of a large town like those round Canterbury and Maidstone. Now allow me to remark, that the hop gardens near these and other smaller towns bear no proportion whatever to those situated where no extra town-manure can be purchased.

The Kent and Surrey hop-growers procure rags and various valuable manures from London, which they can well afford for this crop, while they would grudge such expenditure for any other. Have we not the same advantages, as to situations near large towns, that the Kent and

Surrey growers have? Is there not as much manure of all sorts made in Norwich, as in Canterbury and Maidstone both put together? Have we not a great resource from our herring works? Have we not as many small towns as they have in Kent, where purchased manures may be had, supposing these were the only situations that you consider would pay for the cultivation of this plant? I feel confident you will on reflection admit that we have just the same sources as to locality for the supply of manure from towns, as they have in Kent; and further I contend that Norfolk produces a greater variety of soils in close neighbourhood to each other than any other county, and I need not observe what great advantages may be gained by mixing them. Thus our strong clays are made perfect by the addition of peat, and our light soils by the introduction of clay and marl. I cannot leave this subject without again asserting as I did in my letter of the 3rd of September to our Editor, *that the hop plant would not require one quarter the manure it is now furnished with, if the land were moved deep enough when first planted.* I consider the hop plants of Kent and Surrey confined as in a flower-pot, and of course must be fed accordingly, *having no means of furnishing themselves with food from extension of root.* Now as to the poles. The best pole is not from the sweet chesnut as you state, for the larch is allowed by every body to be more durable, and the hop works on its rough bark better than on either the chesnut, ash, or withy. The joints in the larch are a great support to the bind, which in heavy rains and wind is often liable to slip down. They are now growing the larch both in Kent and Surrey for poles, having proved this wood to be superior to any other; therefore we have as good an opportunity of providing ourselves with poles as other hop growers have—our soil being well adapted to the production of this plant, saying nothing of those produced in our native woods, which alone would furnish a great supply.

I think I must now have removed your two objections to the introduction of hops in this county—if not, pray come and see what I have done, and still am doing towards proving my assertion, that *"as good and as cheap hops can be grown in Norfolk as in any other part of England."* I court inquiry, and should not feel the least daunted by a visit from the oldest hop-grower in Kent or Surrey; and if want of manure be again offered me as an objection, I would ask where the 905 acres of hops round Farnham found their manure? Certainly not from the clean *little street* running through that parish.

I fully agree with you that there is a field for improvement open, both in our dairies and in our manufacture of cider, which subjects I hope at some future period to have leisure to discuss with you: in the meantime, I remain, with thanks to our Editor for this indulgence,—Your obedient servant,  
R. CRAWSHAY.

Honingham Hall, Oct. 23, 1835.

P.S. I have shown a sample of the few hops I grew this season to some of the best judges in London, and I am happy in saying they were pronounced *equal to any in the market.*

A WHITE RAT.—On Saturday Mr. J. Hagyard, farmer, of Londesbrough, near Market Weighton, killed a beautiful white rat. This animal is of the ordinary species found about farm yards, and differs in no other respect than in colour.

## DEVON AGRICULTURAL SOCIETY GRAND CATTLE SHOW.

The Eighth exhibition of cattle, sheep, and pigs, of this most useful society, took place on Thursday, November 5, in the Castle-yard, Exeter. The exhibition was chiefly confined to bullocks, including bulls, oxen, dairy cows, heifers, and fat cattle; and of these there was the finest display we ever witnessed, exhibiting in the greatest perfection, the pride of our country, the North Devon breed. There was a large number of cattle, and most of them were splendid specimens, which elicited the highest commendation from a number of eminent breeders and practical agriculturists, who, together, with a number of gentlemen and yeomanry of this county, as well as others from the neighbouring counties, were present. Amongst the greatest attractions, were the

**YEARLING BULLS**—exhibited for the ten guinea Sillifant Prize, which showed a considerable improvement over those presented at the last meeting. This affords sufficient proof of the accurate judgment of Mr. Sillifant in encouraging the breed of this most useful animal, as of the first importance in keeping up the much admired qualities of the Devon cattle, for which our county has been so long and so justly famed. The whole of these young animals exhibited were of a most superior description, and gave promise to become first-raters. Mr. Quartly, of Molland, presented one 18 months old; Mr. J. Bodley, of Stockleigh English, one 16 months old; Mr. J. Tuckett, of Stockleigh, one 18 months old; and Mr. Comer, of Thorverton, one 16 months old. There was also of

**OLD BULLS**—a noble display; two of which were the largest, and in every respect the best, ever before exhibited in this county.—The proprietors of the bulls were, Mr. James Quartly, Mr. W. Mudge, Berry Pomeroy, Mr. James Parsons, Lifton, Mr. W. Tapp, Twitching, and Mr. John Tuckett, Stockleigh.

**FAT CATTLE**.—There was a prime assortment of fat oxen, but we think, on the whole, not quite equal to what we have before seen, with respect to one quality, thickness across the shoulders and back, which was said to arise from the very unfavourable season we have had for grazing. From the qualities of those exhibited, however, we think there is no danger of a falling off in the Christmas beef. There were some capital fat specimens of the true North Devon breed of oxen, shown by J. S. Newton, Esq., of Bridestowe; Mr. John Whippell, of Brenton, Exminster; Mr. John Pidsley, Pinhoe; Mr. Thomas Beedle, Upton Pyne; Mr. E. Trood, Exminster; Mr. Robert Browne, Exeter; Mr. R. Mortimer, Silvertown; Mr. Thomas, Rose Ash; Mr. H. Ellis, Sampford Peverell; &c. There was also a lot of the largest fat oxen ever seen in this county, a supposed cross of the South Devon, by Mr. Newton, of Bridestowe,—there were not only immense, but very fine animals. Of fat heifers there was the finest display ever witnessed. Mr. J. Quartly, of Molland, exhibited one of the most beautiful specimens for symmetry, smallness of bone, and other essential qualities,—indeed it is almost superfluous to speak of the Quartly stock, which are so celebrated, and with which this exhibition was so much enhanced in interest, there being 21 head of fat cattle, (oxen, heifers, and steers,) in the yard, the property of Mr. Francis, and Mr. James Quartly. Mr. Robert Rookes had two prime fat heifers, and a capital fat cow; one of the former, a very beautiful animal, for fatness and smallness of bone, was purchased by Mr. E. Knapman, butcher, Exeter. There was a very superior fat heifer exhibited, by Mr. John Davey, of Rose Ash; Mr. Cleeve, tanner, of Rewe, had some fine fat heifers; and good specimens were presented by Mr. Wm. Whippell, Mr. H. Ellis, of Sampford, Mr. J. Gould, Poltimore, Mr. J. Tuckett, Stockleigh, Mr. A. Smith, Traisbeare, and there were several other good specimens in the yard, the names of the owners of which we did not ascertain; and also several prime dairy cows and heifers in milk, from the stock of Messrs. Quartly, Mr. John Davey, Rose Ash, Mr. J. Bodley, Stockleigh, Mr. T. Cleeve, Rewe, Mr.

G. Newton, Mr. Thomas London, Netherex. Of milch cows of any breed, except the Devon, there were some fine useful animals shown by Captain Adney, Lympstone; H. F. Bidgood, Esq., Rockbeare; W. Ley, Esq., Woodlands; Mr. J. Surridge, Sampford Peverell; Mr. John Drew, St. Thomas; Mr. Brinsden, Powderham.

**SHEEP**.—There were but a small number of sheep, but those in the yard were exceedingly select, and most beautiful specimens. A pen of ten sheep from the flock of J. Ley, Esq., Trehill, were much admired; as were also two pens of extraordinary fat wethers, shown by Mr. J. Huggins of Shobroke, and Mr. Phillip Francis, of Crediton.

**PIGS**.—The swine exhibited could not be called “a multitude,” but though small in number, those produced were pictures. There was a very fine fat pig of the Devon breed, from S. T. Kekewich, Esq., two years old; Mr. Robert Spark, as usual, produced an extra stock, a monster, 18 months old, an extraordinary animal, not only for fatness, but smallness of bone and symmetry: it was a son of the celebrated Berkshire boar-pig exhibited by Mr. Spark, and which carried off the prize two years following: Mr. Spark was deprived of competing for the prize, in consequence of his being two hours too late in entering the animal. Mr. T. Beedle also produced two of his tenants of the sty, of the Devon breed, not twelve months old, which, for size, fatness, &c., were remarkably fine animals.

The exhibition, taken altogether, was most creditable to the county, being pronounced to be equal, if not superior, to any show of cattle which has taken place in the kingdom.

For the names of the successful competitors for cattle, sheep, and pigs, we must refer to the Prize List.

### THE DINNER,

Took place at Cockram's New London Inn. The attendance was the most numerous we have witnessed on any occasion since the formation of the Society, being composed of Baronets, Magistrates, influential Landholders, Gentlemen, and a large and highly respectable body of the independent Yeomanry of the county, together with many gentlemen and eminent agriculturists from other counties.

JAMES WENTWORTH BULLER, Esq., of Downes, was in the chair; he was supported on his right by M. E. N. Parker, Esq., M.P., H. Tuckfield, Esq., &c. &c.; and on his left, by Sir J. B. Y. Buller, Bart., M. P., Capt. Locke Lewis, &c. &c. The presidents of the side tables were J. H. Ley, Esq., and J. Sillifant, jun. Esq.; and the Vice-Presidents' chairs were occupied by B. Fulford, jun. Esq., A. Stowey, Esq., and Mr. N. Foote. We also observed, among those present, Sir H. P. Davie, Bart., J. Kennaway, Esq., J. Milford, Esq., E. S. Drewe, Esq., J. S. Pitman, Esq., Dr. Shapter, &c. &c.

The cloth being removed, and “the King,” and other loyal toasts, having been drunk and duly honoured,

The *Chairman* (J. W. Buller, Esq.) said, in rising to propose the toast which stood next on his list, he must claim their indulgence, for he never rose with feelings of greater diffidence, seeing that he was surrounded by gentlemen of so much more practical experience in all that concerned agriculture, and who were therefore, far better acquainted with the subject on which they had met than he was. He would however remark, that, residing as they did, in a county the soil of which was so capable of yielding in abundance, almost every kind of produce, and which had been long famed for its cattle—(cheers),—it seemed to him that nothing was wanting but union and cordiality among them, to raise our native Devon to the highest rank of any in the kingdom for agricultural produce of every description.—(Loud cheers.) He was most happy to say that such a desirable feeling did actuate all present and the county at large, and he would assure them there was no one more deeply satisfied on the great importance of agriculture, or more desirous for its prosperity, than himself.—(Cheers.) And it was because he was satisfied that this

society was most beneficial to the cause of agriculture, that he was desirous of giving it all the support in his power.—(*Great applause.*) He rejoiced to see so many eminent judges of farming in all its branches, from different parts of the county, meeting together to give their united experience for the public benefit, because he was well aware, that by such means Devonshire, which had in past times in many respects much to learn, would hereafter be enabled to give to other counties the benefits of her experience and improved agriculture—(*Hear, hear.*) No one could now view the different parts of this beautiful county, and see that in all kinds of crops we could vie with any district, and see our cattle,—of the superiority of which full proof had been given by the splendid specimens exhibited in the Castle-Yard that day—(*cheers.*)—without feeling an honest pride in Devonshire, and being satisfied that we had, within the last few years, made great progress in improvement. With regard to the excellence of the stock exhibited, he might mention that part of the county (the North) more favourable for grazing; yet it must not be forgotten that there had been presented many excellent specimens from other parts of the county.—(*Hear, hear.*) That the Devon Agricultural Society had been the cause of much of the improvement that had taken place he thought could no longer be doubted, and it must be gratifying that other district Societies had sprung out of it from which much good had resulted. He congratulated the county upon the success which had attended their exertions, and he congratulated the large and most respectable assemblage which had now met together to support this central society, because it augured well for their future progress, and showed that instead of receding they would continue to advance and extend their beneficial operations.—(*Great applause.*) The great point for the attention of this society was the improvement of their stock, which had indeed, been long and justly celebrated; and he might again allude to the exhibition that day, in proof that they had not flagged.—(*Cheers.*) Whatever might be the state of agriculture at this time, it was gratifying to find that the same energy, the same talent, and the same anxiety, as ever, was exerted, to keep up the fair fame of Devon with regard to its stock. Another point of importance was the improvement of the land, and although in this we might not have reached to perfection, yet he believed this society would prove one of the best means to bring about that most desirable object. He was always gratified to see individuals laying out their capital in improving their land, if a fair return could be made in produce; because it must be obvious that an estate in high cultivation benefited the labouring class, as well as the master, and the more produce there was, the better it would be for the country at large. He wished to see the great interests of the country going hand in hand.—(*hear, hear.*)—and as many improvements had been making, and were still making in machinery, for the purpose of manufactures, let those who were particularly concerned in the great staple interest of the country, agriculture,—upon which all others hinged and depended,—(*cheers.*) go on in the same march of improvement, which would enable them to maintain their ground, and to keep pace with other interests. He had before noticed their stock, but he could not help returning again to that subject, when he recollected the liberal Sillifant Prize—(*long continued cheering.*)—for yearling bulls, which had excited much interest, and which it must be obvious would prove of the greatest benefit in keeping up the breed of their stock.—(*Cheers.*) There was one topic more, upon which the former Chairman had much enlarged, and therefore it was unnecessary for him to detain them longer upon it,—he meant the prizes to agricultural labourers and servants of good character.—(*Cheers.*) Great and important advantages had accrued not only to the labourers themselves, but to society at large, by the encouragement thus given to the honest, industrious, and well-conducted of this most useful class; and he was most happy to see that this subject had been taken up by the parishes, where ploughing-matches had taken place. Whilst, however, he would say let the best men in the parish be rewarded, he would also say,

let the best men in the county be rewarded, which was the case by the plan of this central society; for the more the labourer was encouraged and stimulated to good conduct, the better it would be for his employer, and for all ranks. He knew of no class of society in which he could point out more instances of sobriety, or industry, of good conduct in all the relations of life, and indeed of all the qualities which ennobled human nature, than among the British labourers.—(*Loud cheering.*) He knew the labourers had been subject to many privations, but they had been faithful to their employers, and from their general good conduct deserve the respect and esteem of all. He hoped the rewards distributed on this occasion, would have the effect of stimulating others to imitate the good example of those who, from their long and faithful service and excellent characters, had been the successful candidates, and that it would show them, that those who moved in a higher sphere of life were most anxious for their welfare.—(*Loud applause.*) The worthy Chairman having touched upon a variety of other topics of interest connected with the business of the day, expressed his gratification at having been requested to preside on this occasion, and concluded by proposing “the health of the Right hon. Earl Fortescue, the President of the Devon Agricultural Society, and prosperity to the institution over which he presides,” which was drank with three times three, and continued applause.

The Secretary, Mr. Robert Dymond, then read the following

#### LIST OF PRIZES.

##### CATTLE.

The best old bull, 10l 10s to Mr. Tapp, Twitching, North Molton.  
 Second best ditto, 5l 5s to Mr. Pidler, Hittesley.  
 The best Yearling bull, not to exceed to years old on the 1st January 1836, 5l 5s to Mr. J. Tuckett, Stockleigh Pomeroy,  
 Second best ditto ditto, 3l 3s to Mr. John Bodley, Stockleigh Pomeroy.  
*Premium given by John Sillifant, Jun. Esq.*—For the best Yearling bull, not to exceed two years old on the 1st of January, 1836, the property of, and exhibited by the breeder thereof, a piece of plate, or 10l 10s, to Mr. Francis Quartly, Molland.  
 For working oxen no premium was awarded.  
 The best pair three-year-old working Steers, bred in the county, 3l 3s to Mr. J. Quartly, Molland.  
 Second best ditto ditto, 2l 2s to ditto.  
 The best two dairy cows, 6l 6s to ditto.  
 Second best ditto, 4l 4s to Mr. Francis Quartly.  
 Best single dairy cow, 3l 3s to ditto.  
 Second best ditto, 2l 2s to Mr. James Quartly.  
 Best three-year-old heifer, in milk, 3l 3s to Mr. F. Quartly.  
 Second best ditto ditto, 2l 2s to ditto.  
 Best two-year-old heifer, 3l 3s to ditto,  
 Second best ditto 2l 2s to ditto.  
 Best Mich cow, of any breed except the Devon, 2l 2s to Mr. J. Surridge, Sampford Peverel.

##### FAT CATTLE.

Best pair of fat oxen, to have been in the possession of the exhibitor nine months, 5l 5s to Mr. T. Beedle, Upton Pyne.  
 Best fat ox, ditto ditto, 3l 3s to Mr. Thomas, Rose Ash.  
 Second best ditto ditto, 1l 11s 6d to Mr. T. Beedle.  
 Best fat heifer, ditto ditto, 3l 3s to Mr. J. Quartly.  
 Second best ditto ditto, 1l 11s 6d to Mr. J. Gould, Poltimore.

##### FAT SHEEP.

Best pen of not less than three fat wethers, under three years old, 2l 2s to Mr. J. Huggins, Shobrooke.  
 For wethers under two years old, no premium given.

##### PIGS.

Best fat pig, 2l 2s to Mr. J. Beedle.  
 Second best ditto, 1l 1s to S. T. Kekewich, Esq.  
 The pig No. 1, property of Mr. Sparkes, would have been entitled to a premium, had it been entered for a prize.

The judges desired to state that had one of the pair

of oxen No. 1. (Mr. J. Pidsleigh) been entered as a single ox, they would have felt it their duty to have awarded it a prize; they also desire to call particular attention to the pair of oxen, No. 2, (J. G. Newton, Esq.) as highly deserving of notice. The fat heifers No. 4 and 2 (Mr. J. Gould, Poltimore, and Mr. A. Smith, Honiton's Clist) also possess great merit.

#### AGRICULTURAL LABOURERS, &c.

5/ 5s to Mr. William Lake, servant to Messrs. Leach, of Kentisbeare. Uninterrupted servitude 61 years; total length of servitude 80 years—age 89 years.

3/ 3s to James Hellier, servant to Mr. Thomas Yelverton, of Ven Ottery. Total length of servitude 58 years—age 66 years.

5/ 5s to William Bassett, servant to Mr. Hugh Brant, of Shebbear. 11 children—total length of service 41 years—age 49 years.

Extra premium of 3/ 3s given by Capt. Lewis, to John Stidwell, servant to the Rev. John Bampffield, Rector of Bradford. 9 children—length of service 18 years—age 78.

3/ 3s to Robert Brock, servant to Mr. John Hole, of Bow. 10 children—length of service 16 years.

The master who has retained a servant in husbandry under his own roof for the longest period, a silver medal, to Mr. John Parsons, of Bridestow—retained James Parsons, a servant in husbandry, 52 years.

2/ 2s to James Parsons, servant to Mr. John Parsons, of Bridestow—total length of service 52 years—age 70 years.

3/ 3s to John Blanchard, servant to Mrs. Mary Davy, of Cheriton Bishop—total length of service 70 years—age 77 years.

2/ 2s to Sarah Morrish, servant to Mr. Ewings, of Crediton—total length of service 40 years.

1/ 1s to Jonas Stoneman, servant to Mr. John Partidge, of Bow—total length of service 34 years.

The renting farmer who has paid the greatest sum for agricultural labour in proportion to the size of his farm, from 30th Sept. 1834, to 30th Sept. 1835, a silver medal, to Mr. Richard Gardner, of West Worlington.

The farmer of his own estate, who shall have paid the greatest sum for agricultural labour, in proportion to the size of his farm, from 30th Sept., 1834, to 30th Sept., 1835, a silver medal, to John Gubbins Newton, Esq., of Bridestow, who has paid for agricultural labour, on his own estate, of 260 acres, the sum of 637/ 10s 2d.

The case of a venerable labourer, named Hookway, of the parish of Okeford, was represented to the meeting: he had reared up *twenty-two children*! and had no relief whatever, until after his wife had given him the twenty-first child, when she sustained a long illness, himself being unfortunately attacked with illness at the same time. He was entered too late to compete for a premium. The announcement was received with the most vehement cheering, and at the suggestion of the secretary, which was immediately responded to, it was determined that he should be rewarded; and a subscription was entered into, when three guineas were given him, amidst the cheers of the meeting. He was present, being between 70 and 80 years of age, and excited much interest.

**THE JUDGES.**—For cattle, Mr. Nicholas Foot, Cornwall; Mr. John Passmore, Mr. John Bindon.—For fat cattle, Mr. James England, Mr. Thomas Reynolds, Mr. Robert Browne.

The industrious and deserving labourers who had obtained the premiums were presented to the chairman, who addressed them in a most suitable manner, after which he proposed, "A honest peasantry, their country's pride." *Drank amidst much cheering.*

The CHAIRMAN then spoke in warm terms of commendation of the judicious and praiseworthy course pursued by those who had gained the silver medals, and again dwelt, in forcible terms, on the great advantages of laying out capital in the improvement of land. He concluded by proposing "The health of the successful competitors for the silver medals," which was drunk with great applause.

The CHAIRMAN proposed the health of Capt Lewis—(*great cheering*)—he was entitled to their warmest

thanks, not only for his great exertions in the management of the business of the society, but because he had been a coadjutor with them in the distribution of prizes to the labourers; for on examining the testimonials, and finding a deserving character to whom they were not enabled to award a prize, the Captain most liberally supplied it out of his own pocket. (*Tremendous cheering.*)—Capt Lewis's health was then drunk with *three times three, and a breeze.*

CAPTAIN LOCKE LEWIS rose to return thanks, and was again greeted with loud cheers. He expressed his acknowledgements for the honour done him by the President who had proposed his health in such handsome terms, and to the company present who had received it in so cordial and so gratifying a manner; and proceeded to give an interesting detail of the proceedings of the society since he was elected a member of the committee, in the course of which he spoke in warm terms of the liberal conduct of Mr. Reynolds at the society's ploughing match at Thorverton, in having handsomely entertained those present, many of whom were strangers, with a sumptuous collation; and also noticed the manner in which Mr. Beare, of Kenton, entertained in his own house the eminent artist Mr. Shiel, and afforded him every facility in executing the admirable paintings of the native sheep which now graced that room. Capt. Lewis announced that the Sillifant Prize would be continued by Sir T. D. Acland, which was received with much cheering; and in conclusion, he proposed the health of Mr. Shiel, which was drunk with great enthusiasm; and acknowledged in a brief but appropriate address by that gentleman.

The CHAIRMAN spoke in high terms of praise of the prize given by Mr. Sillifant, as one of the most important and judicious of the society, and having warmly eulogised the Hon. Gentleman for his liberality, and his zeal in promoting the interests of agriculture, proposed the health of John Sillifant, jun. Esq., amidst the most vehement and long-continued cheering.—The toast was drunk with three times three, and repeated applause.

Mr. SILLIFANT returned thanks in an admirable speech, in course of which he observed that he did not approve of quackery in anything, and therefore he did not approve of quackery in agriculture; but although he never believed, as some had, that these societies were to be a panacea for all the depression of the agricultural interest, yet *this he did believe, if their land was better cultivated, if their stock was improved, if they looked into their local expenditure, and took advantage of the best manure, these things united would have the effect of relieving agriculture.*

—(*Cheers.*) And by attending such meetings as these twice a year, where they brought their experience together; they could not but benefit each other, and the agricultural interest at large. He expressed his gratification that the prize for yearling bulls would be continued by Sir Thomas Acland, and desired, with the leave of the President, to propose the health of that Hon. Baronet, who not only supported the agricultural society, but every other institution which had the good of the country for its object. The health of Sir T. D. Acland was drunk with three times three, and continued cheering.

"The health of the judges of each description of stock, and thanks to them for their exertions on this occasion."—Mr. BINDON returned thanks.

Sir J. B. Y. BULLER, Bart., M P., rose, and was greeted with the most tremendous cheering; and after a variety of observations in support of the society, having warmly eulogised Mr. Buller, proposed "the health of the worthy President, with thanks to him for the ability with which he has presided this day."—Drunk with three times three, and continued cheering.

Mr. BULLER returned thanks, with much eloquence and feeling, and again expressed his readiness at all times, to come forward in support of the society.

"The health of the successful candidates for cattle, with three times three;" acknowledged in an able manner, by Mr. QUARTLY.

"Success to agriculture and trade," with great applause.

"The health of the unsuccessful candidates," with

three times three.—Mr. ROBERT ROOKES, being loudly called on, rose amidst loud cheering, and returned thanks in a most manly and admirable manner.

E. S. DREWE, Esq., in an able address, in the course of which he alluded to the great benefits arising from the ploughing matches, proposed, "success to the central and local ploughing matches, and may they be extended throughout the country"—Drunk with three times three.

J. H. LEY, Esq., being loudly called on, acknowledged the toast, in a brief but appropriate speech, in the course of which he observed that those excellent practical farmers, Mr. Gibbings and Mr. Whipple, were entitled to the credit of being the first projectors of ploughing matches, and he proposed their healths, which was drunk with great applause.

Mr. GIBBINGS returned thanks, amidst loud cheering.

The healths of Sir J. B. Y. Buller, Bart., and E. M. Parker, Esq., the members for South Devon, was drank with the most enthusiastic applause, after which the Hon. Members severally returned thanks in able and eloquent addresses. The healths of Sir H. Davie, Bart., Mr. Fulford, the Vice-Presidents, and Mr. Ley were proposed, and drunk with loud cheering.

The health of the indefatigable secretary, Mr. Robert Dymond, was proposed by the Chairman, who warmly eulogised that gentleman for his distinguished services, and great attention to the business of the society; after which the toast was drank with three times three, and continued cheering. Mr. Dymond acknowledged the compliment in the most appropriate terms.

### ON ROT IN SHEEP.

(To the Editor of the *Quarterly Journal of Agriculture*.)

The attention of your readers having again been called to the internal rot of sheep, I would humbly offer the following remarks to their consideration, hoping they may be of some use in leading either to a prevention or cure of that distressing disease which has been the means of ruining so many of our poor farmers, and perhaps of injuring the health of many of our people, who have been fed with unwholesome mutton. I first, then, would recommend your readers to read a small book published in 1823, at Berwick-upon-Tweed, by a Lammernuir farmer,\* not that I agree with him as to the cause of the disease, but he gives many interesting facts and useful hints. He supposes that the rot is occasioned by feeding in a luxuriant after-growth of grass, but I have yet to learn that a luxuriant after-growth of clover occasions this disease. The fact I believe to be, that it is some particular plant which affects the animal. It is surely no longer believed that it is wet or cold; for if a ewe when giving milk, does not suffer, is she more likely to escape the effects of cold than another sheep? But I believe it is admitted by medical men, that women giving milk are not so apt to suffer from poison as other persons; so also with sheep. I am inclined to believe that the butter-cup (*Ranunculus*), is the plant which is the cause of the mischief. Green, in his *Universal Herbal* says, that all the parts of this plant are exceedingly acrid. In the Isle of Sky, it is used instead of Spanish flies to raise a blister. Curtis

states that when cattle are tempted or forced to eat it their mouths become sore and blistered; and according to Linnæus, sheep and goats eat this plant, but cattle, horses and even pigs, refuse it. Geese also eat it. Now, sheep and geese are more apt to have enlarged or diseased livers, than any of the other graminivorous animals that I am acquainted with.

But to return to the Lammernuir farmer. He recommends salt as a decided cure for this disease. the dose is  $1\frac{1}{2}$  ounce of common salt, given in  $\frac{3}{4}$ ths of an English pint of water, to a sheep with an empty stomach, for three or four mornings. Limewater is also good. I have seen both given; and, on killing the sheep that had two doses of the salt, there were about 160 flukes taken out of its liver, most of which were dead. But as a preventive is better than a cure, I would call your attention next to White, that close observer of nature. He says in his *Natural History of Selborne*, that "worms seem to be the great promoters of vegetation, which would proceed tamely without them, by boring, perforating, and loosening the soil, and rendering it pervious to rain and the fibres of plants, by drawing straws and the stalks of leaves into it; and, most of all, by throwing up such infinite numbers of lumps of earth." Again, he says, "that the earth without worms would soon become cold, hard-bound, and void of fermentation." But more applicable still to the case of your correspondent, in p. 232, where he says, "Lands that are subject to frequent inundations are always poor, and probably the occasion may be, because the worms are destroyed." Now I observe, from your correspondent's remarks, p. 503 of vol. v. of your Journal, that his meadow, although well laid down in grass, soon appeared starved, after having been irrigated; so it is well worth his examining whether or not the worms have been destroyed by frequent irrigation? If so, I have no doubt he has got rid of the moles also, as the latter feed chiefly on the former. The Ettrick Shepherd says, vol. ii. p. 700 of your Journal, that it is his opinion, as well as that of shepherds, that the extirpating of moles, or doing away with mole-hills, was the primary cause of the disease amongst sheep, known by the name of pining. Now the conclusion to which I have come in my own mind is, that earth is necessary for the general health of sheep, be it in the shape of mole-hills or worm-casts. True it is, that there are no moles in the sister island Old Ireland, and the sheep there are in general, I believe, sound, but there must be plenty of worm-casts. Your correspondent strengthens me in this opinion, that earth is good for sheep, when he states that folding them occasionally in fallow, is sometimes a means of preventing the rot.\*

I watered a field of old grass in summer 1833, which I stocked chiefly with sheep, and I found they soon became all tainted, although those of a neighbour from the same breeder, were perfectly sound. The shepherd, who had known my field for many years, said he was not aware that sheep had ever suffered in the field before from the rot; and I now think it very probable that I erred in not stocking the field sufficiently, thus by the length of the grass preventing the sheep from getting at the worm-casts or other earth. It occurs to me, that one reason why the disease of the rot is more common in England than in Scotland is, that they do not feed their grass so close as we do. Besides, they do not clean their

\* This is an excellent practical treatise on the management of sheep in upland pastures. Its author, the late Mr. John Fairbairn, of Hallyburton, we had the pleasure of knowing well; and many will bear us out when we state that no Lammernuir farmer could show a better flock of Cheviot sheep than he had. We may mention, as our correspondent only alludes to the former paper on rot arising from water meadows that this paper came to hand too late for insertion in our last number.—Editor.

\* Buckbean (*Menyanthes*.) class 5, Ord. 1, is said to be a cure for the rot in sheep.

fallows so well, and have more butter-cup, having older and richer pasture. The meadows in the neighbourhood of your correspondent are entirely new, so perhaps the worms are not yet destroyed, which may account for no rot being in these pastures; and those that are watered by other streams may perhaps be supplied with mud or earth from such streams.

It is a custom at the Duke of Montrose's, and with others who feed pigs, to give them occasionally ashes or cinders; and as a pig is very apt to overeat itself, and to take all sorts of mixtures, it ought always (when prevented by confinement from getting at the earth of the field) to be provided with some alkali, to correct the acidity in its stomach. I had some time ago a large fat hog, which was confined, and kept very clean, getting nothing to eat but meal of various kinds, with milk; and just about the time I intended to kill it, I was prevented by its becoming very costive and unwell. I did not know how to administer any opening medicine to so strong an animal, but in turning it out of the sty I found it begin to eat earth and lime; I therefore immediately mixed some magnesia with milk, and it soon took a sufficient quantity of it. I would also mention, that when the root of the bitter cassava is given, in the West Indies, washed to pigs, it kills them, but when they make their way into the provision grounds, and take plenty of earth with this root, it has apparently no bad effects on them.

It ought to be generally known whether potatoes, when given raw to pigs or cattle, should be washed. I know not what is the best corrective for the poison of the solanum family, but an alkali is given to counteract the bad effects of meadow saffron and prussic acid. At all events, some earth may be the means of preventing swelling in cattle, when feeding either on turnips or potatoes.\* I remember a butcher in the West Indies telling me, that he found cattle which were fed in pastures, through which a pure running river passed, had their livers always diseased, whilst those cattle which had water to drink out of filthy stagnant ponds, in which they stood for many hours in the day, had their livers quite sound. He and I both thought at the time, that it was the difference of temperature in the water, but I am now inclined to think that the earth was the means of keeping the liver sound.

I hope these few remarks may be of some use to your correspondent, or may be the means of drawing out some information from others. Whether the rot is occasioned by some particular plant, or by a luxuriant after-growth, occasioning a fermentation in the stomach of the animal, my firm conviction is, that salt or earth, or both, are of use to gaminivorous animals, as grass is occasionally to dogs and cats. Every observer must have seen horses eagerly chewing the roots of grass with earth, and grooms are aware that it is a bad sign of the state of the horse's stomach. Chalk is given to calves, and lime or shell gravel to fowls.

I would now ask, what takes place if a sheep eats some earth? does it not absorb the acid in its stomach and form a salt, thus in part agreeing with the recipe of the Lammernuir farmer? He mentions a striking fact (in his book before referred to), that the sheep herds in Spain, while feeding their flocks on land

with limestone, do not give salt to their sheep, but have occasion to do so when feeding them on any other soils; which I could account for by the lines correcting the acidity and forming salt. I may here mention the way in which salt is given to sheep in the West Indies; a large cask without ends is laid upon its side on the ground, a small hole being dug for the swell of the cask; four stobs or stakes are then driven into the ground, two on each side of the cask, to keep it steady; the salt is then put into it, and so protected from the rain. Those who give salt in this way, and feed their pasture close, so that the sheep can get at the worm casts, need not, I think, be much afraid either of the internal or foot-rot.

I have thus attempted to say a word in favour of the worm, as the kind-hearted Eitrick Shepherd stood forward in defence of the mole, rook and wood pigeon. I recollect destroying almost all the vermin in a large district of country in Perthshire, with a view of increasing the game; but the rabbits multiplied to such an extent as to become an immense nuisance. By the way, may not the increase of field-mice in a district in France, mentioned in the miscellaneous notices of your last number but one, be accounted for in the same way. I would recommend to them a large importation of owls. If man sets his wisdom in opposition to the all-wise Lord of the Universe, and destroys in a small degree the balance of creation, every thing suffers from it. We are indeed wonderfully connected together; yes, the meanest and most grovelling animal is needful for the well-being of the whole. S. W.

## ACUTE FOUNDER IN THE FEET OF A MILCH COW.

(From the Veterinarian.)

Immediately after calving the animal caught a "chill," as the man termed it, which at first settled itself in the udder, and partly in the feet; but, by some topical application that he used, it left the bag and went to the fore feet, thereby causing the poor beast to hobble along like a foundered horse; indeed, she was so lame that she could scarcely stand.

Notwithstanding all this, the proprietor did not send for a practitioner until a fortnight after it first happened, nor did he either bleed or purge her, but thought she would get well without the help of medicine. He, however, at last, sent for me. I had her soles thinned, and her hoofs rasped. I bled her in the toe of each claw, and gave her a purging drench. I afterwards administered small doses of sulphur, from three to four ounces, with tonics and stomachics.

The cow is now very well, constitutionally speaking, but is still lame and tender in her feet, and loses flesh, from the pain and irritation of these parts. I likewise ordered poultices to be applied, but with no apparent good results.

It is very remarkable that she never flinched when her feet were compressed by the pincers, or the hoof was struck with the hammer, nor do they feel unusually hot. The joints are perfectly free from heat, tumefaction, or tenderness; so that it cannot, I conceive, be any affection of those parts. Here, then, I am fixed in a professional labyrinth, hardly knowing what to do. Perhaps some of your readers may throw a little light upon the case at some future time.

\* A large quantity of earth, particularly in wet weather, eaten with turnips or potatoes, will cause cattle to scour, a small quantity will not; but scouring prevents swelling from either root.—EDITOR.

## EAST SUFFOLK SOCIETY FOR THE PROTECTION OF AGRICULTURE.

The Third General Annual Meeting of the EAST SUFFOLK SOCIETY FOR THE PROTECTION OF AGRICULTURE took place on Tuesday last, the 3rd of November, in the Great Room of the ancient castle of Framlingham.

The meeting having been called by advertisement, to take into consideration,—“whether, under the continued and increasing depression of Agriculture, it was advisable for the East Suffolk Society to unite with the Cambridgeshire and other Agricultural Associations, with the view of forming a general confederation of the Landed and Productive Classes throughout England, having a CENTRAL BOARD OF COMMUNICATION in London,—for the purpose of instituting a rigid inquiry into the real causes of the present distress, and of procuring by all lawful means some beneficial change in the state and prospects of the Landed, Farming, and General Productive Interests of the Kingdom,” and deputations having been invited to attend from the neighbouring Agricultural Societies, the proceedings of the Meeting were of an unusually important character. Numerous letters were laid on the table expressive of regret on the part of the writers for their non-attendance; amongst others, from Lord Henniker, M. P., and Edward S. Cayley, Esq. M. P.; letters were also read from the East Kent Agricultural Society, fully approving of the general objects of the proposed CENTRAL SOCIETY; and from the Royal Bucks Agricultural Society, inviting a deputation to attend the Great General Agricultural Meeting, to be held for a similar purpose at Aylesbury, on the 12th instant. The Meeting was attended by a numerous and highly respectable body of the Landowners and Tenantry of the country, though from the circumstance that the South Suffolk Society for the Encouragement of Agriculture, held its first annual meeting on the same day, the attendance was by no means so numerous as otherwise would have been the case. On the platform we observed John Moseley, Esq., Sir C. B. Vere, Bart. M. P., Sir Edward Kerrison, Bart., M. P., J. Thurnall, Esq., President of the Cambridge Agricultural Society, T. C. Brettingham, Esq., President of the Harleston Agricultural Society, Norfolk, R. Broun, Esq., Hon. Secretary to the Committee of Baronets, R. Barthropp, Esq., F. Hayle, Esq., Mr. Wase, Mr. Pierson, R. N. Shawe, Esq., W. A. Shulldham, Esq., F. White, Esq., Captain Shafto, Colonel Bence, C. Lillingston, and G. Twiss, Esqrs.; the Revs. Mr. Crutwell, and J. H. Groome; and Messrs. R. and A. Ransome, Poppy, Flowerdew, Newson, &c. &c.

J. MOSELEY, Esq., the President of the Association, took the chair. He said it was his duty to trespass upon their patience for a short time, while he made some observations upon the question which they had been brought together to discuss. He had so often addressed them upon the subject of the general distress of agriculture, that it would be now

totally unnecessary on his part to occupy their time with any repetition of his observations. He should therefore proceed to offer some remarks upon the object of the meeting, as stated in the advertisement, and in doing so, he could not help referring to what he had stated to them at the commencement of that institution, namely, that the agricultural part of the community, although they might be powerful in wealth and in population, and their welfare most important to all the rest of the productive classes, still they were less influential and less powerful than others, in controlling the objects or measures of the Government. The reason why they were less attended to, and were less successful in their applications than other branches of the community, arose from the circumstance that the latter had their committees, their directories, and their unions, in a state of organization, ready at any moment to resist or to promote the success of any bill that was proposed in Parliament, which could in the slightest degree have a tendency to affect their interests. (*Hear, hear.*) The tocsin of clamour was sounded by these unions, and directories, and committees, and through them it reached the ears of the government itself, which was compelled to listen to their demands. He had stated the necessity which existed that they (the agriculturists) should adopt the same course, that they should also establish unions, and that they should set an example and induce other counties to follow in their steps. Unless they did this, it was useless to expect that they could make any impression upon the Government, by any single petition, or by any single remonstrance. They had tried petitions to Parliament, and they had also tried addresses to the Throne, and he was sorry to say, that these had produced no good result, either to that Association or to the country at large, (*hear, hear*); it had therefore become apparent to all, that it was only by a concord of different counties, and these counties appointing a central power, located in London, that they could now hope to obtain redress of the grievances of the agriculturists. (*Hear, hear.*) The object of the meeting, then, was to consider whether they would join other counties in the project which they had in contemplation, namely, to form a Central Board in London, to watch over and protect the interests of agriculture. The shipping, the manufacturing, and the commercial interests, have had for a number of years boards for their protection. In 1815, the agriculturists had also a board for the same object; and through the means of that association, the farmer obtained in Parliament a protection for wheat from foreign competition up to 80s. per quarter, as well as a protection for every other sort of grain in a similar proportion. That board had unfortunately been abolished, and since its deposition, agriculture had continued gradually to decline in prosperity. (*Hear, hear.*) It was for the re-establishment of such a board that they were now called together. He should mention also, that when the board of agriculture was dissolved, (for what cause he knew not), the interests of agriculture were placed under the control of a board, the most hostile that could possibly have been selected, namely, the Board of Trade, at the head of which was Mr. Huskisson, the champion of free trade, and to accomplish that

object, he need not tell them, that the reduction of the price of corn was a necessary ingredient. (*Hear, hear.*) At the death of Mr. Huskisson, he was succeeded by Mr. Grant who was a still greater enemy to the prosperity of agriculture. He, in bringing forward the question of importation of foreign wheat, defrauded the farmer of 6s. per quarter, in consequence of an erroneous calculation: to use no harsher term. That gentleman had, however, been removed to a higher situation, and they had now fallen into the hands of Mr. Powlett Thompson, (*loud laughter,*) who, at his late election for Manchester, stated, that he would try to do away with all monopolies, and more especially the monopoly of farmers, viz., the the Corn Laws. (*Hear, hear, and cheers.*)

Mr. SHULDRAM rose to move the first resolution, and in doing so he said he should travel a little from it, and give a history of what they had done, and trace step by step the means by which they had arrived at the question which they had been called together to discuss. On the 21st of July last, a meeting of the Society was held at the Crown and Anchor. It was called to petition Parliament; and after some discussion, it was agreed to petition Parliament. Mr. Lilington on that occasion presented an able petition, and, after some discussion, they agreed to petition, but the prayer was not palatable to the feelings of several who were present. He (Mr. S.) then took a bold step—a step which he should not hesitate to take were he a member of the House of Commons—he proposed at once, that the Members for the County be requested to move in the House of Commons, that the supplies be stopped until his Majesty's Ministers applied their attention to that part of the Royal speech which regarded relief to agriculture. (*Cheers.*) The petition, adopted by the meeting, was presented, he was happy to say, by Sir Chas. Vere, and he (Mr. S.) tendered the thanks of the meeting to the hon. and gallant Member, for his having on this occasion done so much for them. (*Applause.*) But the unfortunate resolution, which went to strike at the root of the evil—to stop the supplies, unless the principal and most important interest in the country received the attention of his Majesty's Ministers—that resolution, he said, died a natural death. (*Laughter.*) He heard no more of it. He tried to urge a member of the house to come forward at once, and present it, and to take the consequences. He could be prejudiced neither in family, fortune, nor in any other way. That resolution would have enabled them to ascertain with certainty who was at the head of the agriculturists of England. (*Applause.*) They heard a great deal of the Marquis of Chandos, and of others who were ready to head a party in Parliament, and it was of no little importance to have 100 votes ready to support them; but they, the agriculturists, wanted to know, who it was that would apply himself to ascertain the cause of the depression of agriculture? (*Loud Cheers.*) Time, he had no doubt, would prove that the Marquis of Chandos was a staunch friend to the agriculturists; but at present he had not pledged himself so decidedly, as the motion he (Mr. S.) proposed at the meeting, to which he had already alluded, would undoubtedly have done. As he had before said, his motion died a natural death, and feeling that they should not remain passive under that neglect, and anticipating that there would be a large meeting at the Ipswich Lamb Fair, he undertook upon his own responsibility to become public agitator for Suffolk. (*Applause, and laughter.*) A meeting was called by him (Mr. S.), and having previously read a work by Mr. Bernard, and being struck with the

able manner in which he had laid before his readers the real state of the country, he invited that gentleman, and others, to attend. Mr. S. then narrated to them the proceedings of that meeting, and read the resolution adopted: that the present House of Commons was unworthy of the confidence of the country. (*Hear, hear, and cheers.*) But, notwithstanding this, they were no forwarder as to the real object sought to be attained. The proceedings got only so far as the Ipswich papers, and as far as they circulate, they were laid before the public. It was now necessary, therefore, that they laid their hands decidedly upon the main spring of agricultural distress, and devise some mode of subverting the thralldom, under which all Ministers, of all parties, who had ever ruled the country, appeared to be held. (*Loud cheers.*) He alluded to that powerful interest, the monied interest; and until they could make some head and front against that interest,—the non-producers, or the money-monster, so called by public writers—he said, until they could contend against that body, they could produce no real good to the agriculturists of England. (*Cheers.*) Societies might be established by the land-owners and the farmers, but they could never be efficiently protected unless they had the means to attack those who attacked them; and their measures should assume a character, defensive, or otherwise, as occasion should require. This being the case, they had taken the steps to which he had alluded; and he had been commissioned by the meeting held at Ipswich, to represent to this meeting their opinion, that it would be advisable on its part, to enter into a combination or confederacy with other societies in other counties, such combination or confederacy to be under the direction of an effective head Society in London. Such was the tenor of the resolution which he had the honour of bearing as a sort of ambassador from the meeting held at Ipswich, to that association. (*Laughter and cheers.*) They would now have to decide whether they thought proper to form a general confederacy. (*Loud cheers.*) For his own part he thought it highly desirable; for without some means of making their wishes and their sentiments known in Parliament, they might as well breathe them to the winds. He should conclude with proposing a resolution to which he thought there could be no reasonable ground of dissent, namely, "That the agriculture of the kingdom being the first of all its concerns, it is essential for the peace, welfare, and security of all classes of society, that it should be relieved from its present state of overwhelming distress, by an early and active interposition of Parliament." The hon. gentleman sat down amidst loud applause.

Colonel BENCE seconded the resolution.

Mr. MOSELEY put it to the meeting, and declared it to be carried unanimously.

R. BROWN, Esq. then rose and spoke in the following terms:—Mr. Chairman and Gentlemen,—I consider myself highly favoured by being permitted to take a part in your proceedings on an occasion so honourable to yourselves, and so important, I trust, to the agricultural cause of the nation, as that which has assembled us together. For some time past, in conjunction with various eminent individuals, I have been occupied in laying the foundation of a Central Society in London, for the objects stated in a prospectus which is now under the consideration of the committees of the various local agricultural societies in England; and being desirous to embrace some favourable opportunity of personally recommending it to the attention and support of the landed interest of the United Kingdom, I have

availed myself, for that purpose, of an invitation to meet you upon the present occasion. This I am the more gratified to do, not simply because this society has been the first to distinguish itself by calling a meeting with a special view to considering the resolution which I shall have the honour to submit, but because, whether as regards zeal, intelligence, enterprise, or decision, I am not aware that the agriculturists of any other division of the kingdom are better entitled to take the lead in the important work for which I am solicitous to enlist the common services of the body, than are those of the great agricultural counties whose interests are here represented by their deputations. Gentlemen, in claiming for a short time your attention, my apology for an indulgent audience must be the circumstance that my co-adjutors and myself belong to a large number of enquiring men, who, afflicted by the distressed condition of all classes of their industrial fellow-subjects, are labouring in the cause of social reformation. But after many years, during which they and we have laboured in vain, we have come to the conclusion—a conclusion warranted by the whole state and circumstances of public affairs—that all isolated endeavours, whether by individuals or by local societies, whether by the press or by the legislature, will prove unavailing. Could principles of sound social economy—principles which, if practically adopted, would have increased the comforts, rewarded the industry, and improved the state of all our families—have saved us, our condition to-day would have been happy and prosperous; for such principles have been impressed on society in every form of argument, and reiterated in every combination of words. But, gentlemen, such is the unhappy perversity of intellect that prevails in a nation in which the doctrines of the Anarchist, the Mammonist, the Emigrationist, and the Utilitarian, whether of the Ricardo, the Malthus, or the Huskisson school, reign supreme, that were an angel of light to come down from heaven to propound a perfect system of domestic polity, such is the temper of the times that his mission would be vain. (*Loud cheers.*)

Nevertheless, gentlemen, though the individuals with whom I have the honour to co-operate have for years cast their bread upon the waters, we do not despair that it shall yet be found after many days. Though seasons of usefulness have passed by us like leaves on the stream, never to return, still we hope, and 'bide our time'; confiding in the integrity of our endeavours, and reposing in confidence on the maxim, that 'Great is truth, and that eventually it shall prevail.' We cannot believe that the industrial classes of this great nation will be allowed to perish of want in the midst of plenty; or that the gracious Providence which has ever enlarged the destinies of Britain, which has carried her forward through difficulties which seemed insurmountable, which has made 'her merchants princes—her traffickers the honourable of the earth,—which has stretched out her hand over the sea, and made her the mart of nations,' will fail even at the eleventh hour to raise up men who shall remove 'the burden upon the crowned isle,' even the circumstance which has made the

"Voice once heard

Delightfully, 'increase and multiply.'

Now death to hear; since what can we increase

Or multiply, save penury, and woe, and crime."

Gentlemen, it is my firm conviction—a conviction warranted by the whole course and tendency of events—that the only means by which, under the Divine blessing, we can work out the salvation of

our common country—by which we can counteract evil by good, ignorance by knowledge, wrong by right, idleness by industry, dissatisfaction by contentment, poverty by wealth, and improvidence by economy, is by the formation of a Central Society in the seat of government, to watch over, superintend, encourage, and protect the general interests of the classes connected with the soil. A Central Society which shall concentrate the power, disseminate the wisdom, control the operations, stimulate the activity, and render effectual the objects of the local agricultural societies; and which, without having any respect to political opinions, or any purpose except social amelioration, shall, like that great, enlightened and patriotic body which has so long and so beneficially presided over the rural economy of Scotland, comprise the prince and the peasant, the peer and the yeoman, the land owner and the land occupier, the employer and the employed, the noble, the good, the learned, the skilful, the scientific and industrious of all ranks, professions, and occupations in the community. (*Loud cheers.*)

The nucleus, gentlemen, of such a Central Society has been formed, and the particular object which I have now before me is to claim for it your adhesion and support. In doing so I shall not occupy your attention by giving you, on the one hand, my own views as to the various causes of agricultural distress, or on the other, the various remedies which I could propose for their removal. Dis-united, broken-spirited, and weak as the agriculturists are, were I to do so now I would only expose my opinions to have them run the gauntlet through that vampire portion of the public press, whose vocation it is to ring the changes upon every measure except such as are calculated to promote the peace and welfare of the country. But gentlemen, let that union be effected, which I am here to advocate, which would destroy in a short time those circumstances which have so long and so fatally conspired to make the agriculturists of England as a body the most socially blind, the most improvident, the most inactive, and the most unprosperous of all the producing orders of the state, and please God I shall embrace a future opportunity to bring my views in detail before you. Allow me on this point simply to remark, that neither the extension of the currency alone,—nor the repeal of the malt tax,—nor the consolidation of the road trusts,—nor the settlement of tithes,—nor the diminution of poor rates,—nor poor laws for Ireland,—nor the breaking up of the meal trade monopoly, will amount to a permanent and effectual relief. (*Cheers.*) That relief alone will prove permanent and effectual which comprising all these shall in addition by legislative means—1st, liquidate all those imposts affecting the price of food which constitute rent, over and above that portion of it which goes into the pocket of the landlord, and which imposts are perhaps, not less than two-thirds of the whole; 2nd, alter the present system of acquiring and accumulating wealth,—a system which exceeds in enormity every other evil that bears the name of fraud; and 3rd, compensate the industrial classes for that capital which the operation of the Monetary Act of 1819 has unjustly abstracted. (*Cheers.*) These, gentlemen, are measures which the exigency of our affairs render imperative—which honesty, humanity, and policy require—and which the nation has the power to accomplish, whenever it shall possess the will. They are measures in which the agricultural body, if primarily interested, are not solely interested; nor are they to be effected simply by the co-operation of the agricultural societies, but by the joint co-operation of all the industrial classes of the

state. For this purpose you must cease to consider yourselves as an exclusive interest: you must drop your isolated designation of *food growers*, and put yourselves at the head of the *food eaters* of the land. Believe me, the interests of the producing orders, by whatever denomination they may be called, are one and indivisible. When God laid the merciful doom upon our race, that out of this goodly isle from which we are sprung, we shall eat bread in the sweat of our brow even until we return to it again, He never intended that whilst so occupied the mouths of all his children should not be filled with food, and their hearts with gladness. In seeking to repeal the withering curse which the money-mongers have imposed upon us, we contemplate an object which is to bless and better the condition of all the families of the land; and it is one for which it is alike the interest and the duty of all the families of the land to co-operate. (*Loud cheers.*)

Gentlemen, we have for years talked about social distress, and done nothing but talk; for years sat by the side of the rapid stream of that patricidal opinion which is fast undermining all our social institutions, waiting, like the countryman in the fable, until it shall run past! For years, innumerable writers have been sowing the seeds of profitable advice, and if they have fallen into good and honest hearts—as here we deem they have so fallen—the time is near at hand, when we hope to find that they shall ripen to a harvest. (*Cheers.*) Yes! long have the agricultural interest been passive and inactive—long acted on the defensive—never on the offensive. If circumstances have arisen in consequence under which it becomes a duty to counsel a departure from this rule, I can do so with the greater confidence, and the better grace, that by so acting *you never can act except for the well-being of the whole community.* “Agricultural prosperity is the foundation of the national prosperity in every other matter by which that prosperity is produced.” (*Cheers.*) I recognize this to be a grand axiom of social happiness which ought to be practically illustrated in all the domains of economic existence—not laid up on a shelf with a forgotten report of a parliamentary committee. Never let us cease to remember that we cannot illustrate the “*Munity of Members*,” without experiencing that with the *belly* the agriculturists, must perish the *arms* the manufacturers, the *legs* the traders, the *head* the aristocracy, and the *feet* the working classes. (*Hear.*) If then the agriculturists must arouse from their torpor, and enter upon a social campaign, the warfare which you will wage shall be a war against poverty, a war against injustice, a war against idleness, a war against that system which has divided society into two extremes—*usurers and paupers*—to the danger alike of our constitution, our altar, and our throne. (*Cheers.*) Gentlemen, the industrial classes of England are waiting for a sign—be it yours the honour and the manhood to give it. In this county the genius of agriculture has long fixed her abode—whilst on the spot on which we are met, the spirit of chivalry has still I trust something besides a local habitation, and a name. Shake off then your fatal lethargy. Be up and doing! Erect this day the Standard of Social Reformation; inscribe upon its banner the golden economic rule of our blessed Redeemer, “Act by your neighbour as you would be acted by;” and invite to your aid all the producing orders of the state. (*Cheers.*) Powers omnipotent for good, and omnipotent for evil, are marshalling for the conflict—and it behoves the faithful and the wise, the industrious and the just, the loyal and the true, to choose their position and to make their stand. A battle

against WANT must be fought and won; and nobler names are to be acquired by the ploughshare on the fields of Britain than have ever been won by the sword on the cannoned deck, or on the tented plain. (*Cheers.*) A reward greater than sceptered hands ever conferred—even the blessing of a people ready to perish—claims our acceptance, will animate our exertions, and crown our end. (*Cheers.*) What we want alone is confederation; that achieved we shall shortly enter upon a blessed career of patriotic philanthropy, of christian benevolence, and of social love. (*Cheers.*) Gentlemen, believe me, unless we shall so act, the end of the monarchy is nearer than what is conceived. Let us then gird ourselves for the contest. It was once the proud boast of England through the nine centuries during which she extended her dominion over the splendid portions of the globe that acknowledged her sway, that she could expect “*every man to do his duty*,” and never was disappointed. Let it not be said of the present generation, that they allowed their country to perish, because in her own hour of need, when assailed by domestic calamity and civil broils, her demand that “*that every man shall do his duty*,” was unresponded. (*Loud cheers.*) I have now, gentlemen, to thank you for the favourable manner in which you have heard me, and beg to move, “That it is the opinion of this Association that the formation of a Central Society in London, for giving full effect to the objects of the Local Agricultural Associations, which are now comparatively ineffectual from want of union and direction, will be of the greatest utility to the agricultural interest, and that such society will receive the support of this meeting.”

Mr. LILLINGSTON rose amidst applause to second the resolution. He could not say that he addressed them with mixed feelings on that occasion, for he did feel happy and proud, that the day had at length arrived when he could congratulate the County of Suffolk in making some stir, some effectual move, in order that their claims for relief may at length be brought before the attention of the Country and the Government. He had attended meeting after meeting, and whether Conservative or Reform Meetings, he could only say that his sole object had been—whether as Conservative or as Reformer, or by whatever other denomination that had been fixed upon him—he said his only object had been to bring about the time when they should take the first step towards the restoration of national prosperity. (*Loud cheers.*) He felt assured, that all who knew him, knew that that had been his undivided object. (*Cheers.*) He had sought time after time to bring the subject of agricultural distress—to force it upon the unwilling ears of many who, to that day, if their tenantry had not taken a bold stand—(*cheers*)—would have still lent a deaf ear to their complaints—who would have still told them that things would come round again—(*laughter*)—that the poor-rates would be diminished, and that church and highway rates would be taken off, all of which had been as so many lures thrown out to the ox, to induce him the more readily to enter into the slaughter-house. (*Hear, and loud cheers.*) It had been said, that the farmer must come down in the world; and it had been held by one of the Representatives in another part of the county, that the way to relieve the distress, is for every farmer to come back to the Leather Jerkin. (*Hear.*) To such an opinion he would not concede, for never would he say, restore prosperity by reducing the farmer to such a state, unless he saw the gentry themselves begin and show the example. (*Cheers.*) But to come to the point more immediately before the meeting—they had assembled that day, to unite, not discuss what particular measures were best calculated to afford relief: because unfortunately no twelve men could be taken promiscuously from that room who would agree what those measures should be, for in a meeting like the present, it was difficult to argue such a question;

first, because the subject required great attention and deliberation, and would occupy not only the whole of that day, but a fortnight or a month. It was not, therefore, in a meeting like the present, that they could apply the force and test of reason to contrary opinions. With regard, however, to any leading principle, it was important that they should declare it in the face of the whole country. They were agreed on the first point, that the distress of the agriculturists was so great and so unparalleled, and that it had gone on progressively increasing to such an extent, as to render it a matter of paramount necessity that some decisive step should be taken to avert that final doom which appeared to hang over it. (*Hear.*) He would ask, and he should do so with regret—he would ask, how was it that they should have met that day, when they had what was called a Reformed House of Commons—that they should again meet to form a Parliament for themselves—for what was the Central Association, in reality? What was it but a Committee which ought to have been formed by the Reformed House of Commons, and which ought long ago to have been granted? (*Cheers.*) It had been admitted that the agriculturists were in a distressed state; but those who made that admission, hoped that the force of circumstances would produce general amelioration, and that this, that, and the other which nobody understood, would in some way or other produce the effect desired; and lastly, that the whole was to be obtained, more from cautious forbearance, than from active interposition. (*Hear.*) Parliament had not granted a Committee to inquire into the causes of agricultural distress, and they must be aware when they proposed themselves to form a Society, which was to stand in the place of a Parliamentary Committee, having for its object to recommend the adoption of those measures, not only which they desired, but afterwards, from that day which they would command,—for he said, when a Society constituted as that was to be, having for its members the gentlemen who had been that day selected, going to London to meet other delegates, to determine what they wanted, and having done so, he asked, would not that determination sound within the walls of Parliament, and astonish, and overwhelm, and force to the ground all those opponents who had hitherto walked out of the house, or had it counted out, whenever the subject was brought forward, or the moment the subject of inquiry into the distress was commenced? (*Loud cheers.*) It was with regret that they found themselves compelled to adopt this course; but how was the House of Commons constituted? Could they look to one party with more confidence than to the other? For he regretted to say, that whilst on every other question they were divided and in opposition, yet on the other hand, whenever agricultural distress was introduced, they came forward, shook hands, and made common cause. (*Hear, hear.*) He looked upon the Central Association as highly necessary and expedient, as being the only means of averting that most dreadful and awful catastrophe which he saw approaching; for if the occupier of land were no longer able to grow a sufficiency of food for consumption, how were we to be supplied, and what must be the consequence when the supply of food began to fail? It might be said that they could get it from foreign countries. But he answered, they could not do so; for what had three-fourths of the population got to give in exchange? (*Hear, hear.*) Whilst upon this subject, he would allude to Mr. Caley's motion. The object of that Hon. member was, only to get a committee to inquire how far Parliament did or did not possess the power to afford effectual relief to agriculture, and whether an alteration of the currency would be effectual? That motion was directly opposed by the present ministry, and Sir Robert Peel, as usual, backed them in their opposition. The hon. bart objected to it on this ground, "It is clear you have mixed up the currency with agriculture; it is quite clear you mean nothing but the mere depreciation of the currency, which we will not listen to, and we will not go into it." (*Hear, hear.*) It was well known that Sir Robert Peel had more than doubled his own fortune by the very measure of which he was the supporter, and

which is called *PEEL'S BILL*; but of which he did not mean to say he was the originator. Sir Robert Peel, who had reaped these advantages, was the person to decide on their distress! He had said it was impossible permanently to depreciate a metallic currency—that all persons who have considered the question know that the country can fix what standard it likes. It was well known that he fixed the standard which brought every thing down; and we want such a standard as will enable us to realize remunerating prices. (*Cheers.*) He (*Mr. L.*) had only stated these facts to shew the way in which Sir Robert Peel had met the whole question. The Hon. Baronet had said too, that the Commercial Interest would receive a severe shock if they went into the inquiry; but he (*Mr. L.*) contended the shock would be received by the Monied Interest, who were holding in thralldom not only the productive classes of the land, but the Manufacturing Interest also. It had always been the fashion and the habit at these meetings, when he or any other person who thought with him, proposed to inquire into the matter, to put a direct *veto* upon it. Had they ever brought any thing forward—any plan by which the agriculturist could be relieved, or to raise the agricultural community from their present depressed state? (*No no.*) Then would it not be manly to put his opinions to the test by full, free, fair, and open discussion. (*Loud cheers.*) He was sorry that Mr. Shawe would not consent to be one of the delegates. Although that gentleman did look to go to Parliament again, still he (*Mr. L.*) was very much disappointed that he would not accept the office. He knew that he had one decided object in view, to promote the prosperity of agriculture. He wished that he had consented to be one of the delegates to go and urge first the amount of distress, then the cause, and thirdly, the only possible remedy. He then proceeded to observe, that the system under which they had been suffering had had the effect of neutralizing the intentions of that Almighty Providence which had blessed us with peace and abundance; (*hear, hear,*) for, under the existing laws, let men be industrious and frugal, nay, let them work "double tides," as they were in the manufacturing districts at the present moment—let the manufacturer, or the farmer, toil—let him expend as much capital as he please—yet the more food the one assists in producing, and the more manufactures the other turn out, it is only attended with this effect, to throw into the hands of the monied interest more and more of the good things intended for the community at large, and to abstract still more from the productive classes, those benefits of which it was intended they should participate, and those blessings that were meant for all. (*Loud cheers.*) He trusted that other counties besides Cambridgeshire and Buckinghamshire would follow the example of Suffolk, that they would no longer send petitions to be spurned by Poulett Thompson, and that the landed interest would demand retribution for all the evils under which it had suffered. (*Loud Applause.*)

Mr. LEWIN claimed the attention of the meeting for a short time before the resolution was put from the chair. He said he could not make a very long speech, for the march of intellect was not much in fashion when he was a boy. (*Laughter.*) He then proceeded to allude to Mr. Poppy's letter, inserted in the *Suffolk Chronicle* of Saturday last. Mr. Poppy had said that Peel's bill had not lowered prices; but he thought this was opposed to fact. The late Sir Robert Peel, Lord Western, Mr. Attwood, and many very able men in Parliament, as well as hundreds and thousands out of it have foretold, that it would operate exactly as it had done, namely, ruin the landed interest. Mr. Bernard, Mr. Cobbett, Mr. Cayley, Mr. Crutwell, and Mr. Lillingston, and many other of the most able writers had proved clearly the lamentable fact over and over again and again, the wrong and robbery which it had occasioned, and which was still going on plundering in all its bloom and beauty. (*Laughter, and cheers.*) He would put it to the meeting, had not every 60*l.* put into the funds 20 years ago, become 60*l.*? and had not every 60*l.* invested in land become 30*l.*? and in many thousand of cases, nothing at all? (*Cheers.*) He had at-

tended most of the political and agricultural meetings around him for the last 20 years, and he had always brought the question forward, if no abler person did. He had always found 3-4ths of the middle classes agree with him. (*Cheers.*) They were weak enough, however, to be prevailed upon by their opponents, who said, "wait awhile," and they had waited and been deluded. (*Hear.*) They had uniformly asked and begged for fair prices, but he would now say ask, and beg no more—demand your rights—a fair living from the land which they had cultivated long for the benefit of others, to the loss and injury of themselves and families. (*Loud cheers.*) Moses, by the command of God, said, "Thou shalt not muzzle the Ox that treadeth out the Corn." They were then entitled to fair protection, and this had never been grudged or disputed so long as this country was governed by straight-forward honest Englishmen. (*Loud cheers.*) But (said Mr. L.) when the greatest of all the great enemies (in my humble opinion) England ever had, wound themselves like vipers into our bosoms—the *Frenchified* Huskisson, Poulett Thompson, the Jews, Ricardo, Rothschild and Co., the Scotch Lord Brougham—(*laughter*)—and though last, but not least, the Irish Beggarman, O'Connell and his tail—(*loud laughter*)—who for a long time had governed the Government—will you, I ask, as honest Englishmen, stoop to beg of this Beggarman? (*No, never! and great cheers.*) They had long been amused by one person saying we grow too much corn, and in the same breath exclaiming, "We have too many mouths to eat it." Another would amuse us by shifting the tithes from the clergyman to the landlord. One would save a farthing per acre by the church rate; another a farthing per acre by the county rate; and, lastly, another a farthing per acre by a new poor law, and screw the poor to save it. (*Hear, hear.*) He would say, away with the paltry stuff, the nonsense, and the humbug! Stand up like bold Britons, and demand what they actually wanted to save them all from ruin. They wanted not their farthings, but their pounds per acre; they wanted 300l. more for the produce of every 100 acres of land; and then they would have, not high, but fair prices, which no honest Englishman would grudge to give. (*Loud cheers.*) He would advise them to sit no longer calling upon Hercules, but let them put their own shoulders to the wheel: they had waited until they could wait no longer, and some great good must be done for them, or something too dreadful to contemplate must soon follow. (*Hear.*) But some of their opponents cried out, keep the public faith, and his advice was, join in the cry—not in the French, Scotch, Irish, or Jew logic—keep the public faith for a few, whilst they plundered the many—but in the old English fashion, of truth and justice. (*Cheers.*) He had always told them that Ireland must be raised to a level with England, or England must fall to a level with Ireland. The farmers and yeomen were the marked men; they were the first to be sacrificed, and the landlords with their labourers, as serfs and slaves, were to follow. Their opponents were straining every nerve to bring the curse of God upon them, as it was now upon the Irish, "thou shalt grow corn and raise flocks and herds, but thou shalt not taste thereof." (*Hear, hear.*) Humble, as I am, said the speaker, my ancestors, (the Llewellyns of old,) were a bold and a brave race, and my Welch blood boils within me when I see my country about to be sacrificed at the shrine of Jews and money-jobbers. (*Loud cheers.*) Will you quietly submit to such degradation? (*No, no.*) He called upon the middle classes, the tradesmen, farmers, and yeomen, the strength and body of the country, to arouse themselves, for the cause of their opponents was oppression, wrong, and robbery; whilst their's was truth and justice, and if they persevered, they must prevail. (*Loud cheers.*)

The resolution was then put from the chair, and carried unanimously.

Sir C. B. VERE, M. P., rose amidst loud applause, to move the third resolution. He said that it was necessary that he should say a word or two regarding the petition and resolution, adverted

to by Mr. Shuldham. He was desirous when he presented the petition, to have such an attendance of members as would give weight to its representations. Many opportunities were lost, though he had given notice, owing to the pressure of public business. On the occasion, however, of the budget being brought forward, he resolved, not being able then to present the petition, at all events to speak to the purport of it. He dwelt at considerable length on the necessity of relief, and as he found no possibility of obtaining relief last session, he urged the government during the recess to take into consideration the mode by which the agriculturists might receive assistance, and that some measure having that object, be brought forward when parliament should meet again. He did that which he should always do: he stated strongly that the agriculturists did not require any thing at the expense of other classes: that all they wanted was that which was their fair right to claim; for he did believe that the agriculturists and the land-owners were labouring under a greater proportion of taxation and local charges than any other class in the community. (*Cheers.*) With regard to the resolution, he trusted whenever the occasion called for it, he should not be backward in moving that or any resolution which he thought would be beneficial; and he also hoped he should not be backward in that determination which was necessary to support and second such a resolution; but he did assure them that, taking into consideration the position of parties in the house, if he had moved the resolution, he should have been giving the hand to those who are decidedly opposed to the agricultural interest; and instead of being one of the head of the agricultural interest in that house, he suspected that he should have found himself at the tail. (*Laughter.*) He was sure that all was intended for the best, and he trusted they would give him credit for that feeling. (*Cheers.*) He cordially concurred in the object of the Central Society, for it had always been his strong and earnest desire that the landed interest should have a representative body in the metropolis. (*Loud cheers.*) That society should contain, if possible, as many members of the House of Commons concerned in the interest and prosperity of the land as could possibly be brought together. They might meet together at Framlington to arrange matters, but still after all, unless they could carry their voices to the House of Commons, they would do nothing. (*Cheers.*) He was satisfied a great deal was to be done, by looking at agriculture simply as an agricultural question: he trusted this had always been done; but in saying this, he did not mean that it must necessarily exclude the consideration of many topics and subjects which belonged to the interests of the community at large, whether the capitalist, the trader, or the farmer. (*Cheers.*) What he would advise was, that they should not attach themselves to any particular topic; but give ample time and opportunity to bring every question before a committee of the Central Society, in order that with cool and deliberate judgment, it might be distinctly ascertained where the burden pressed most, and how the relief was the more readily to be obtained. (*Cheers.*) They knew very well it was an old complaint that they had been deceived and disappointed in every quarter. Though succeeding Governments and succeeding Parliaments had repeatedly admitted the distress that existed, they were still in the same state, but every year an impression was made on those who were opposed to their interests. There was now a silence where there used to be a clamour, and that silence indicated a conviction of the state of their distress. The petty relief with regard to the county rate was an indication of this; but he never concurred in the propriety of allowing only half, when the whole was recommended. After some remarks upon the Marquis of Chandos's motion, he said, with regard to Sir Robert Peel, he thought his friend who dwelt upon the conduct of the Hon Bart., in the House of Commons, was a little harder upon him than they would naturally suppose he (Sir C. V.) was willing to admit of. But setting all party feeling and everything of that kind aside: he had himself listened to Sir Robert, without at all being convinced

with his argument, (*cheers*); he had always expressed his opinions upon that subject, and he entertained them still, notwithstanding what Sir Robert Peel had said to the contrary. ("The malt tax," from a voice.) Yes on that subject he would say one word. Desirous as he was to remove that tax, and important as was the question, still he felt he could not, under the circumstances, without acting contrary to his duty, give any other vote than he did. After some other observations, he proposed the following resolution:—"That this society do give its assistance towards forming a Central Association, and do name some of its members to arrange with those gentlemen who are understood to have consented to take part in a committee in London, the best mode of carrying it into effect."

F. WHITE, Esq., rose to second the resolution, and hoped the Central Society would be the means of promoting that union which was essential to the prosperity of the agricultural body.

R. N. SHAW, Esq., rose, and said, he should not have made one remark, but for the circumstance of having been asked to go up to London as one of the deputies to meet the Central Association. The reason he did not accept the appointment was, that a gentleman acknowledged that the formation of it was to depreciate the currency; and as he was opposed to that measure, he felt bound not to commit himself before he knew the specific objects of that Association.

The CHAIRMAN said, that Mr. Broun had declared that that was not the only point, and that the society had other objects.

MR. SHAW—The gentleman from Cambridge stated, that that was the ground of their proceedings.

MR. TWISS—You are not correct. (*Order*.)

MR. SHAW—You will have an opportunity of answering me afterwards. I asked the question, whether that was not the purpose for which the society was formed, and one of the gentlemen said, that that was an object, but not the only one. No person could be more anxious than himself to support the interests of agriculture by every means in his power; if the object of the Association was found beneficial to the agricultural interest, and to the community, no man would be more happy than himself to turn round, and to say, that he had been mistaken. (*Cheers*.) But entertaining a contrary opinion, he would honestly support it, and not concede to any one for the sake of gaining a little ephemeral popularity.

The motion was then put and carried unanimously.

MR. R. RANSOME rose to propose the next resolution, viz.:—"That the following gentlemen be requested to attend the Committee of the Central Agricultural Association, for this Society:—John Moseley, Esq., Lord Henniker, Sir C. B. Vere, Sir E. Kerrison, W. A. Shuldham, Esq., H. B. Bence, Esq., Chas. Lillingston, Esq., the Rev. Mr. Crutwell, R. Barthropp, Esq., Mr. Lewin, and F. Hayle, Esq.: and that the proceedings of this meeting be printed and forwarded to each of the Local Agricultural Societies."—He said, he could not let the present opportunity pass without expressing a hope that the union of the agricultural body, as proposed, would be the means of bringing about those beneficial results which were contemplated by the meeting. It was by temperate and persevering efforts that they could hope that good would be done to the cause; and, as one of a firm deeply interested in the welfare of the agriculturists, he esteemed it a privilege to be allowed to unite in any effort that had that object in view, being fully persuaded that the success of trade depended upon agricultural prosperity. (*Cheers*.)

MR. J. WASE (Brusyard) seconded the resolution, which was carried unanimously.

The Rev. Mr. CRUTWELL said, that whilst in the room at the Crown and Anchor, he was surprised, at the commencement of the business, at the extraordinary reluctance displayed to any allusion being made to the question of the currency. He should not now enter upon the subject; but he was willing to give his attendance at any time within a distance of 20 miles from his residence, to meet any number of gentlemen, and give them an opportunity to hear what, in his opinion, was essential to their interests. He would go into the investigation, and put the question on such a footing

that every man of plain understanding and of ordinary attention would see his way clearly, and arrive at a certain conclusion, that it is the only means by which any hope can be derived for affording relief to the general distress.

MR. LILLINGSTON rose to move a resolution. Part of the public press (and he need not remind them of its immense power) had taken a firm and decided part in behalf of the agriculturists, and another portion of it had taken the part of their enemies. One of the London papers which had invariably supported their interests—he said he knew, that one of the great money holders, one who had been grasping the vitals of the land until they had been nearly destroyed, had been making overtures to the *Morning Herald*, to induce it to desert the interests of agriculture, and to go over to its enemies. The *Morning Herald* had, however, stood firm, and he should therefore propose "that the cordial thanks of this Society be given to the managers of the *Morning Herald*, the *Standard*, *Mark Lane Express*, and all others, for their hearty and earnest support of the landed interests in these times of its greatest need and poverty, and more especially for the manly and independent manner in which they had time after time called attention to the ruinous effects of Peel's Bill on all the productive interests of the country, and that they had done this at a time when so large a portion of the press had lent itself to support a system, which compromised the interests of all the industrious classes of the community, and had lent themselves to protect the rapacious money interests, which was daily engulfing within its vast vortex, the production of the industry of the whole country. And lastly, that the Secretary be requested to transmit the same to the respective offices that it may be inserted in the opening above the leading article.

MR. SHULDHAM suggested, that the thanks of the meeting be also given to the *Suffolk Chronicle* and to the *Ipswich Journal*; for when they spoke of Papers advocating the cause of agriculture, and of doing good service, he could not stand by and suffer those two Papers to be omitted. Whatever little bickering there might occur between the Editors, who had entered upon a contest of rather conflicting principles, he must say that whenever any public meeting had taken place, or any measure had been proposed, in that county, for the relief of the interests of agriculture, he had always seen a most able and praiseworthy advocacy of the cause in both.

After some discussion the motion was carried.

MR. TWISS then moved a resolution to the effect that the change in the currency had been the primary cause of agricultural distress, and that a return to a sound paper currency afforded the only prospect of an effectual remedy, and that no government which would not entertain that question deserved the confidence of the farmers. This, he said, was the opinion entertained by the Yorkshire Society, by the Cambridge Society (a deputation from which was then present), by the Kentish and Worcestershire Societies, and was in fact the opinion which was entertained by a large majority of the agriculturists, and one let their opponents strive as they might, which they would no longer refrain from acting on.—It was proved clearly by facts that the contraction of the currency reduced the value of the produce of labour, and consequently the wages of labour. Nothing could be plainer than that a man who at one time had only half as much money as he had at a former period, could not afford to pay so much for food as when he had twice the money to go to market with; and as corn was a perishable article, and one which must be sold, they had at once the solution of the mystery of low prices. It was susceptible of clear proof, and he was now stating not merely his own opinion, but the opinion of the Cambridgeshire Association, as recorded in a letter of their Chairman, that there was now 100,000,000*l.* less of circulation than in 1818, the whole of which sum was of course deducted from the value of the produce of British industry. (*Hear.*) The various remedies which had been alluded to might, indeed, be productive of some good to them, and they were reductions to which the farmer was entitled; but it would be quite absurd to imagine that they could fill

up this immense vacuum. With the national debt, the burden of which was so great, and for which, be it remembered, the soil of England was mortgaged (*no, no! and yes, yes!*) nothing but an expansion of the currency could meet the difficulty—an expansion to be effected by an issue of notes by the Bank of England, and by the country bankers, and by coining the sovereign at two-thirds of its present value, so that the ounce of gold should make six sovereigns, as it ought to do. (*Hear, hear.*) This certainly would bring home the absentees; but where was the harm of that? Millions were now spent abroad which ought to be spent in this country, and nobody would be injured by the change but the mere money holder and money dealer, whose interest it was to reduce the price of every species of the produce of industry to the lowest pitch. The shipping, the manufacturing, and trading interests, must also receive protection from foreign competition by the imposition of foreign duties, or, if necessary, even by total prohibition. (*Hear.*) The immediate consequences of this step would be good prices, good profits, and good wages. (*Hear.*) This was the unanimous opinion of the numerous members of the Cambridgeshire Society, and they were determined that their opinions should reach the legislature: for they were resolved in future to support no candidates who did not uphold these views; and if all other societies would adopt the same course, and follow the example of the men of Cambridgeshire, the question would very soon be settled. (*Loud cheers.*)

Mr. LILLINGSTON seconded the resolution, and observed that the farmers of Suffolk had now the truth before them which he had for some time been endeavouring to propagate.

SIR CHARLES VERE said, it struck him that the resolution was defeating the very object for which they had assembled. They had met to agree to become a part of an association which was to be formed in London, and which was to consist of deputations from the various counties throughout the kingdom. They had agreed to send up certain members of the Society to join that association, for the purpose of deliberating and considering in what way the agricultural interest could be best relieved. He then moved the following amendment: "That this Society do enter into no resolution that shall tend to embarrass, or prejudice the deliberations of the Central Association, by leading it to give a preference to any particular subject of discussion, in order that the Central Society may the more surely arrive at a sound and unbiassed opinion of the real causes of Agricultural distress, and the measures that may be applied for its relief with the greatest certainty of success."

Mr. PEIRSON seconded the amendment, which was supported by Mr. MOSELEY and Mr. SHAW.

Mr. Twiss's motion was then put and carried, 20 being in favour, and 4 against it.

It was then moved by Mr. LEWIN, "That a Deputation, consisting of the Committee above named, and the following:—James Newson, Esq., R. Broun, Esq., and W. Bloss, Esq., be appointed to take part in the proceedings of the meeting to be held at Aylesbury on the 12th inst.; at the same time lay the above resolutions before it, convey to Lord Chandos the confidence of this Association, and the hope that its proceedings of this day may meet with his Lordship's concurrence, and the support of the agriculturists of Buckingham."

"And that the proceedings of the meeting be printed and forwarded to each of the local Agricultural Societies."

After a vote of thanks to Mr. Mosely, the meeting separated.

In connection with the proceedings at Framlingham, we subjoin the following extract from a speech of Hart Logan, Esq., who presided at the first annual meeting of the South Suffolk Association for the Encouragement of Agriculture, which took place the same day, at Sudbury.

After the health of "the County Members" had been drunk, C. STEDMAN, Esq., rose, and, after pronouncing a deserved eulogy, gave the health of the Chairman, "Hart Logan, Esq., and Success to the South Suffolk Agricultural Society." The toast was received with long-continued and enthusiastic cheering.

Mr. LOGAN rose amidst the loudest acclamations, and spoke as follows:—I beg leave to return to my friend, Mr. Stedman, my best thanks for the kind manner in which he proposed my health, and I am equally grateful to the company for the warm reception which they have given to the toast. We are assembled to celebrate the first annual meeting of the South Suffolk Agricultural Association, and it must be gratifying to every one present to witness this numerous attendance of respectable and intelligent agriculturists on this occasion. So favourable a commencement augurs well for the prosperity and success of our infant institution. This is the third agricultural society that has been formed within a short period in this county, and if there is one thing more than another that can tend to promote the union so anxiously wished and desired by that champion and friend of the agricultural interest, the Marquis of Chandos, it is societies such as these, (*cheers*), which bring together the landlord, the tenant, and the industrious labourer—they bring together the clergyman and his flock, and I have great pride and pleasure in seeing the list of our members graced by the names of many clergymen of the neighbourhood—than whom no class are more ready to promote the cause of agriculture and to improve the condition of the poorer classes of Society. (*Much cheering.*) I wish to impress on your minds that you ought not to rest satisfied with merely paying your subscriptions. No, if you wish this Society to flourish, to attain that end you must put your shoulder to the wheel, and excite in the breast of your friends and neighbours a warm interest in the cause. (*Cheers.*) This is not a political society. (*Cheers.*) We have no political party—our party is that of the British farmer and the industrious labourer. (*Cheers.*) I am happy to see that Agricultural Associations are now gradually forming in every part of the kingdom; and my opinion is, that they cannot be too numerous; for if we only assist each other, and cultivate a good understanding among ourselves, we shall, "by a long pull, a strong pull, and a pull altogether," be enabled to assume that station—that important station which will tend to give us that weight—to which, as an influential body, we are so justly entitled; and to obtain that relief from our present distress which is so indispensably required. (*Cheers.*) There was a time when the landed interest of the country was considered of so much importance that a public Board of Agriculture was established to protect its interests. (*Hear, hear.*) That Board has since been abolished, and our interests are now placed under the controul of the Board of Trade, and we are, in part, committed to the tender mercies of the President—Mr. Poulett Thomson—the unflinching, the uncompromising, friend of free trade in corn. (*Loud cries of "hear, hear."*) It is only by union that we can at all hope to get relief, for the landed interest is at present like a rope of sand. (*Hear, hear.*) I can only say that if once the Agricultural interest is destroyed—if we are reduced to that state, which the neglect of our interests gives us reason to expect, the merchant and the manufacturer will lose their best customers and supporters. (*Cheers.*) Let the landed interest be once destroyed—let the class from which the riches of the State are derived be ruined, and we

shall be placed in a situation such as this country has never before known. The price of our produce, especially of that article to which we look for the payment of the rent, is now lower than it has been before during the last sixty years. (*Hear, hear.*) Sir John Campbell, in his Address at Edinburgh, said that Agriculture is in a flourishing state at this time—(*cries of "oh, oh!"*)—but it must be evident to you that the state of Agriculture is misunderstood by Sir John Campbell, as he would never have made a statement so much at variance with the facts. (*Cheers.*) Mr. Logan then adverted to the advertisement which appeared in the Ipswich papers last week, convening the meeting of the East Suffolk Society for the Protection of Agriculture, at Framlingham, and it having been read by Mr. Hart Logan, jun., he continued:—This expresses the object which this Society has in view, and which agrees precisely with that sort of union which I should like to see throughout the kingdom. The Secretary did me the honour to address a letter to me requesting that I would attend the meeting (which takes place to-day) with a deputation. My answer was, that their Society had unfortunately fixed their meeting for the same day as ours, and it would be imperative on me to be here, but that I fully concurred in the objects they had in view; and I requested that the Secretary would communicate to me the result of the meeting, in order that if it were necessary, I should call a special meeting, to consider the propriety of our taking up the cudgels in the same way. (*Cheers.*) One Association like this can do but little, but when they are united throughout the kingdom on the same principles and with the same views, I do not hesitate to say, that the agricultural interest will have some chance of being relieved from the distress under which it at present labours. (*Cheers.*) If what I wrote to the Secretary meets the approbation of the present company, I think I may properly say that the Society sanctions it. (*Cheers.* and a general holding up of hands.) Every man connected with agriculture is so much taken up with his own business and at the present moment with the Guardianship of the poor, that I think it would be a pity to call a meeting, when so large and respectable a body appears to be unanimous on the subject. (*Much Cheering.*)

### MEETING OF THE AGRICULTURAL DEPUTATIONS AT AYLESBURY.

On Thursday, Nov. 12, a Meeting of various deputations from the agricultural associations, from all parts of the kingdom, met at Aylesbury, to confer on the best means of proceeding in the next session of parliament, for the benefit of depressed agriculture. The Marquis of Chandos was in the chair, and most able and eloquent members of the associations of Worcestershire, Warwickshire, Leicestershire, Suffolk, Cambridgeshire, Lincolnshire Buckinghamshire, Herefordshire &c. attended.

The Marquis of CHANDOS, having taken the chair, addressed the meeting:—Gentlemen, I now propose to state to you the reasons why this meeting has been called. Some short time ago certain resolutions were sent to the Bucks Society from the Agricultural Society of Worcestershire, requesting me to call a meeting of the different agricultural societies in England, to propose some measure of general relief, if possible, for the English farmer—(*hear, hear.*) It was therefore felt necessary to follow the expression of that meeting to

which I have alluded, and those resolutions were sent to the different associations in the country. That being done, the meeting of to-day is the result and we have now a deputation of many gentlemen from a great many associations in various parts of this country. From other associations we have received replies, that in consequence of the distance, and not having had time to convene general meetings, deputies could not be sent. Having thus explained the reasons why this meeting has been called, I now beg leave to direct your attention to the other great point for which we have assembled—viz., how we shall proceed in the House of Commons, with a view of obtaining relief for the farmer. From what took place last session, we must feel great difficulty in any plan which we may propose with that object. When the question of the malt tax was proposed last session, it was brought forward under auspicious circumstances—it was a new Parliament—many Members were pledged to aid in procuring some measures which should be favourable for the farmer, of which that was deemed an important one. It is not necessary for me here to say one word of the manner in which that question was treated; but I must say that it did appear to me to be a favourable opportunity of bringing forward that question—(*hear, hear.*) Looking at the decision of that great question in the House of Commons, I feel it to be due to the Agricultural Societies of England, I feel it to be due to myself, to say that I do think it would not be politic to moot the question in the ensuing session (*hear, hear.*), for you would undoubtedly be subjected to a signal defeat; and a defeat so signal would tend to make the public believe that the agricultural interest was not strong in the country; also that it was not strong in the estimation of the government. The question then now is, what is it politic for us to do to afford relief to the farmer? Looking at the state of the country and the state of parties—looking at the manner in which the malt tax question was received during the last session of parliament, my opinion is, that it would not be a wise course to renew that question in the ensuing session—(*hear, hear.*) Many gentlemen in that house will listen to you provided you are united in your views of relief; but if you be disunited you will be a weak instead of a strong party. It has been too proverbial that the farmers are like a rope of sand. You have now an opportunity of acting in concert; and when I tell you what my opinion is—that I do not think the mooted question of the malt tax would be favourable, or that it would tend to produce relief—it is for you to decide. Sir Robert Peel, you know, was desirous of removing some local pressures, which would tend to relieve the farmer from a portion of his burdens. That Right hon. Baronet was prepared to give up such a local pressure; but the present Government took a different view of the subject. The Worcestershire farmers conceive that the removal of the malt tax would relieve them greatly, and I agree with them; but, I again repeat, I do think, were the subject brought forward during the approaching session, it would prove injurious rather than otherwise, because from what transpired last session it is impossible to calculate upon success. Sir Robert Peel, you may recollect, was prepared to make a considerable reduction of burdens by an adjustment of the land tax. There is no doubt, gentlemen, that if the land tax were so arranged, a very large sum of money would be obtained—a sum of two or three millions, which would of course be appropriated to the reduction of some taxation. Now, having stated to you what was done, and what was attempted to be done, in the course of last session, in order to afford relief to the farmer, it remains to ask what is to be accomplished,

or attempted? I cannot conceive that it will be prudent to go into the House of Commons without having some general plan, for without such a system particular nostrums will be advanced—(hear, hear.) It is essential for all parties desirous of obtaining relief for the farmer that there shall be a unity of purpose. What is to be done then? Let us embark altogether with one desire, with one wish, and put aside for a moment private or party feelings, and ask for the appointment of a select committee of the house of commons to inquire into the distress of the agriculturists? I think, if you persevere, you will certainly have a committee appointed, and that committee will report to the house upon the subject whatever may be their views. With regard to some of the nostrums proposed to remedy the evils complained of, I am aware that the currency question is believed by some essential to be investigated; the state of the currency being considered by those persons as the entire cause of the evils in question. My opinion, however, is, that you should avoid mixing up the two great questions together—(hear, hear), otherwise you will have little chance of carrying the great question respecting agricultural distress; and I think if you mix the two questions together you will fail in your object, for the present government, and Sir Robert Peel, with many of his friends, are averse to open the question of the currency, and you will go therefore before Parliament with those two great parties against you. The two subjects are of such magnitude that they ought to be entertained separately. We have no hostility towards any class of his Majesty's subjects, and we ought to avoid all possibility of being so understood. You may rest assured that my wishes for your success will continue, whatever may be your opinion as to the mode of attaining it. I have told you what my opinion upon the subject is, and depend upon it, it will be well to avoid mingling together those two great questions. I beg it to be understood that I am giving no opinion whatever with regard to the currency question. I would have us appeal to the House of Commons for a committee; we only require a jury to give us a patient hearing, for our cause must ultimately prevail. The way, however, to do so, is to conciliate, if possible, all parties. All branches of trade and commerce must be more or less flourishing, as agriculture is affected. I deprecate, therefore, bringing forward any charge against other parties. It is my earnest wish that you should approach the House of Commons, advocating your own cause unmingled with other great questions, and depend upon it you will fail in your object if you mix other questions with that of agricultural distress. Let us be animated with one sentiment from John O'Groat's House to the Land's End, and by asking for a Committee of Inquiry only we shall attain our object. Let us in this way obtain it, but for God's! sake let us not weaken our cause, which is good, by joining it with questions not essential. No parliament, no government, can resist such an appeal. In this county our society is united—we have felt the good effects of it. But if the Agricultural Societies are divided amongst themselves—if they think differently as to the mode of obtaining relief, we shall most decidedly fail. If we once become disunited, we lose our strength, never to gain it again. (Hear, hear.) I have taken this opportunity of giving you my humble opinion, without presuming to place it in competition with that of others who view the matter in a different light. Such, however, it is; and although I may regret that my opinion may differ from that of other people, I shall never cease from pursu-

ing what I believe to be absolutely essential for the success of our cause. (Hear, hear.) Having thus explained the object of the meeting, as well as my own particular views, I have nothing further to add but that I shall be most happy to listen to the sentiments of any gentleman here present who may be disposed to favour the meeting with them. (Hear.)

G. J. TWISS, Esq. observed, that he necessarily, from the novelty of his situation, felt much diffidence in attempting to address them, which he should not have done but for an observation of the noble marquis, that the question of the currency must stand alone, and was totally unconnected with the distress of agriculture. In this he felt compelled to differ entirely with his lordship: in his humble opinion they were inseparably connected that nothing in the world could separate them; to him it seemed totally impossible for any man to contend that the contraction of the currency had nothing to do with the price of agricultural produce. He ventured to contend that every shilling taken from circulation was a shilling taken from the value of that which had to be sold in the market, and it was not denied that there were a hundred millions less in circulation now than in 1818. With regard to another observation of the noble marquis, that a majority of both parties in the house are against entertaining the question of the currency, it might be so, but this, he felt certain that a vast majority of the people out of the house were in favour of an extension of the currency; and, in the event of a dissolution of Parliament, the sense of the country upon that subject would soon be discovered. Then as to the mode of relief suggested by Sir Robert Peel and others—the equalization of taxes—the relief from local burthens,—and others which had been alluded to by the noble marquis—the whole of them together would do just as much to relieve the existing distress as pouring a bucket of water into the sea would increase the waters of the ocean: but the fact was, that landlords, generally speaking, so long as they receive their rents would not trouble themselves to inquire into the question. It was no Radical who was addressing them; he had laboured day and night for months together to return Conservative members for the county to which he belonged, and he was ready to do so again, but he felt bound to say that tenants were wrong to run about the country begging, and borrowing, and reducing their capitals for the purpose of meeting their landlords at the rent-day, and if their farms did not produce their rents they should not mislead their landlords by leading them to suppose they did, and thus induce them to believe, the distress was not half so great as it was, and shut their ears to the question of the currency, a question, however, which never would be fairly inquired into till the whole race of money-mongers and fructifiers were cleared out of the House of Commons,—till the reign of common sense was restored to us,—till our Legislators took plain and obvious truths for their guide, and ceased to be misled by the theories of political economists. (Cheers.)

MR. LEWEN, one of the East Suffolk Deputation, who avowed himself to be a Tory in politics, denounced the present system of the currency, and insisted it must be thoroughly changed. He had been a considerable buyer of corn during the last 20 or 30 years, and had had ample opportunity of witnessing the direful effects of the system. We were now and had been for some time, governed by new-fangled systems. He wished to see again the good old English mode prevail—(hear, hear.) We had been too long under the Frenchified system of Huskisson

and Poulett Thomson. The political economists, the Ricardos of the day, had been too long and too implicitly followed. The country ought to shake off the *incubus* which pressed upon it. He could not endure the thralldom of O'Connell and his tail—(laughing.) What! Was it come to this, to beg of the big Beggarman? —(Hear hear.) The day, he hoped, was not far distant when English feeling would again prevail in the Legislature. (Cheers.) With respect to the currency question, he must be permitted to add, that he knew that a large majority of the body that had sent him, entertained an opinion that it had occasioned the distress of the farmer, and hopes were cherished in favour of an alteration of the system.

The Rev. Mr. CRUTWELL urged the meeting to consider the currency question, and thought that the whole of the pressure upon the farmer was to be traced to Peel's Bill.

Sir WILLIAM YOUNG, Bart. M. P., said his own impression accorded entirely with that of the Noble Chairman as to the propriety of keeping the two great questions alluded to perfectly distinct. He was satisfied that if the Parliament were urged to entertain the question of currency, mingled with the state of distress affecting agriculture, the friends for an inquiry into the cause of such distress would be defeated—(hear). Had they not, indeed, been beaten last session on the question of the currency? If he recollected rightly, Mr. Cayley's motion went to this extent, for a select committee to enquire into the state of the currency, with a view of relieving agricultural distress—(hear, hear). On that question they were defeated by as large a majority as that which existed on the Noble Marquis's motion for a repeal of the malt tax. But if a general motion for an inquiry into agricultural distress were proposed, he (Sir W. Young) was of opinion that it would not be resisted on the part of the Government. It did not follow that because such a motion was carried, therefore all inquiry before the committee upon the currency question was shut out—(hear.) No such thing; for it would be competent to investigate that subject before the select committee. Nothing could preclude such an inquiry.

R. SPOONER, Esq., one of the deputation from the Worcestershire Agricultural Association, said he was sorry to differ from the noble Marquis in the chair, as to the propriety of considering the subject of the currency on the present occasion: he was willing to concede the point so far as to keep it out of the petition to parliament, and was content that that petition should contain one prayer only, namely, for a committee to inquire into *all* the causes of agricultural distress, with a view to provide an immediate and efficient remedy; but all committees hitherto appointed for that purpose had been restricted from inquiring into the currency question; he wished that this meeting should express its opinion upon this important question, in order to prevent such restrictions in future. The noble marquis must be prepared to have the motion for the inquiry met in the usual hacknied parliamentary way:—What plan have you to propose? an inquiry without a specific object will but create disappointment by exciting hopes which cannot be realized; the noble marquis must then be prepared to state his plans: the resolution of this meeting will have the effect of leading his lordship's mind to the full investigation of the subject—the result of which must be to convince the noble marquis, that no efficient relief can be granted but by the adoption of a just and practical standard of value. Should the noble lord state this to be his view of the case, unless we now

express our opinion, he will be met with the assertion, that it is not our view, that he had no right to assume it as such, as the only legitimate inference was, that had that been our opinion, that opinion would have been expressed. Mr. S. then proceeded to prove, from facts, that under the present standard of value, agricultural produce could not for an average of years bear a higher price than it now does; that under the joint standard of gold and silver, a bushel of wheat never for any length of time exceeded in value the Mint price of an ounce of silver; that the present standard must necessarily have the effect of establishing a rate of prices ten if not fifteen per cent lower than the old standard; and clearly pointed out the difference between a single and a double standard, between coin prohibited from being melted and exported, and coin unshackled with such prohibitions; he then explained how unjustly the landed interest had been dealt with, that they had been led on by the resolutions of the House of Commons, past in 1810 and 1811 to submit to taxations, to make family arrangements, &c. under the full conviction that there had been no departure from the standard of value, of course therefore never contemplating the effect now produced by a return to what Parliament declared had never been departed from: and now they are called upon by the same parties who so misled them, to submit to be ruined under the plausible but false plea of national faith;—"national faith" said Mr S. must, and as far as this meeting has the power to say, shall be kept; but it shall be kept towards the debtor as well as the creditor, towards the industrious labourous class of agriculturists as well as towards others. Mr S. alluded to the present prosperous state of trade and manufactures; disclaimed any wish on the part of the landed interest to benefit themselves at the expense of those interests, but doubted whether any reflecting man could come to the conclusion that their prosperity was stable and well founded. The maintenance of a steady state of credit was essential to the continuance of that prosperity, and the basis upon which the credit of the country was now built was too narrow, too easily affected by events which neither Parliament nor Government nor the Bank of England could control, and against which the most calculating and sagacious could not effectually guard, to preserve a steady state of credit. He explained this by shewing that internal commotions, bad harvests, and rumours of war, would inevitably create such a drain for gold, as would compel the Bank of England, in self-defence, to curtail the circulation to a degree to endanger, if not destroy, the present prosperous state of commerce and manufactures; he would not follow this subject further, as he thought he had said enough to induce the meeting to agree to the proposition, that the state of the currency was one great cause of the distress of which they complained,—a cause, which as long as it existed, would aggravate every evil, and paralyze every remedy. One point more he would press upon the consideration of the meeting, that the very persons who now admitted that the alteration of the currency had done much mischief, but now asserted that it was too late to alter, and that the evil was over, were the persons who, when the measure was first introduced, declared that it would create no mischief whatever, and that the largest effect it would produce upon prices would not be more than four per cent.; he had himself argued that question with Mr. Ricardo, and asserted that the ultimate effect would be to depress prices one-third, or three and thirty per cent.; he left it to the meeting to say who then took a right view of the subject,

and called upon them to attend to those now whom experience had shown to be right then, and who now told them in the present standard of value no relief could be given to the landed interest; and who taking Locke as their high authority, told all the other classes of the state, that, notwithstanding present appearances, their security and their prosperity would ultimately be found inseparably mixed up with the ruin of the agriculturists. Mr. S. then quoted some passages from Locke, which he stated Sir Robert Peel had but partially quoted in the year 1819, passages which clearly proved the danger and injustice of original depreciation, but which proved, at the same time, the still more aggravated injustice, and more imminent danger which must follow the diminution of the circulating medium; a necessary consequence of endeavouring to return to a high standard of value, after having adopted a depreciated standard for any length of time. He then showed that the farmers could not expect any relief from an alteration in the corn laws, and that the present laws only inflicted upon them the odium of monopoly without any benefit from protection; he then ridiculed the various schemes which had been adopted for the relief of the farmers,—the shepherd's-dog tax—the parish-boys-in-livery without tax—the reduction of the county-rates—and said he could designate such miserable attempts at legislation, as adding insult to injury. He then reprobated the language used by some members of parliament, in public and private, who admitted, under the present system, the present race of farmers must be demolished; but comforted us with the statement, that the energies of the country would remain, and a new race of farmers be established of less luxurious habits than the present. He called upon the meeting to join in endeavouring to rouse the agricultural interest to a firm constitutional defence of themselves, their families, and their property, and implored the noble marquis not to compel them, by refusing to mix up the question of the currency with the defence of the farmers, to choose another leader in parliament; to him they looked with confidence for the future, as they remembered the past with gratitude, and it would be to them matter of deep regret if they were compelled to commit their cause to other hands; but he assured the noble marquis that the opinions (which he felt he had but imperfectly expressed,) were now almost universally held by the agricultural interest, and had gained too firm a ground to be easily stifled; and if we were driven to the alternative, which he sincerely deprecated, and implored the noble lord not to inflict upon them, either of abandoning their claims of having the question of the currency re-considered, or of seeking a new leader in the House of Commons, painful as it would be, the question must be examined, even at the loss of the noble marquis as our leader. The hon. gentleman's speech, of which the above is but a brief outline, was much applauded throughout.

W. MEDLEY, Esq. of Iver, rose to notice the observation of the noble lord, that if the question of the currency was mixed up with any petition for agricultural relief, it would be opposed by both parties—Whigs and Tories. In answer to this, Mr. Medley stated that so far back as Feb. 1833, he, a private and humble individual, had called a meeting of members of parliament, at the Thatched House Tavern, at which 28 members attended the first meeting, 49 the next, and 98 the third, and 49 more sent in their adhesions to the proposition that *the monetary system of the empire should be enquired into*, and that they would support a motion to that effect

then announced to be brought forward by Mr. Attwood. Mr. Medley hence inferred, that if he, a private individual, could procure the sanction of 147 members to such a measure, surely the noble lord could do much more with his powerful interest. It is true the motion was lost, but only by a majority of 30 or 40. Since which the question of the currency was far better understood; but suppose (continued Mr. Medley) that the noble lord is right in his conjecture, what remains for us to do, but to form a *third party* in the state, an *agricultural party*, and such a party he said would carry all before it. What (said the speaker) does the noble lord mean to say that any House of Commons dare refuse the prayer of their petition?—the petition of five millions of human beings, all agriculturists, and on whose prosperity the permanent prosperity of four millions of manufacturers depend! I repeat, (said he) PERMANENT prosperity, for when the agriculturists flourished was there a town or village that did not share in their prosperity?—a prosperity not to be compared with that transient, temporary, uncertain prosperity afforded by foreign trade, liable to be interrupted every year by war, by balance of exchanges, and various other casualties to which the home trade was not liable. Was not this (he said) like the parent who preferred a stranger to his own offspring—Could any thing be more unnatural? Such absurdities and anti-nationalisms could only enter the brains of such men as Huskisson, Ricardo, Poulet Thompson, and Morrison, and was so contrary to all patriotism and common sense, that he could only look upon such men as enemies to the empire. Could the noble lord (he said) so mistake his position in society, could he be so devoid of honest ambition,—the ambition of doing good to millions, (than which a more noble ambition could not fill the breast of an honest man,) as to refuse the offer now made to him of heading the agricultural interest of the whole country, but to prefer being at the head of a mere county? Surely the noble lord could not be so insensible to the proud and important position he was now called upon to occupy, as to refuse such a prayer? if he did, others would soon occupy it; but he begged he would take further time to consider it. As to Peel's bill, Mr. Medley pronounced it the most bare-faced, iniquitous fraud ever practised in any age or country. Reduce this (he said) to an act of private life and how would it stand?—all the parties would have been transported; and is it the less iniquitous because it is effected by a body of lords and commons, only *thirty* of the whole number understanding its effects. But what were the simple circumstances of the case? An act is passed which its *very authors* confidently assert will only make a difference of four or five per cent.; relying on the truth of this statement, both sides of the house agreed to it;—it turns out, that instead of four per cent., it makes 50, and even 100 per cent.; but, instead of immediately altering it, as would have been done in private life by any man who had made so gross a blunder, the parties making it persist in its continuance, and now, not only have the impudence and ignorance to tell you that it is too late to go back, but have the effrontery to accuse you of a desire to rob them, and to violate public faith. Gentlemen, (said Mr. Medley) I know too well the importance of preserving public faith, and, from principle, will never consent to its violation; but is there no faith to be kept with the agriculturist, with the manufacturer, as well as with the fundholder? As certain (said Mr. Medley) as there is justice in heaven, so certain will the authors of this pretended blunder be brought to justice; and, when that is

done, I shall not desire to live a day longer. That a few men profiting and fattening on the calamities of the many, and having the bare-faced effrontery of accusing those who desired an enquiry into the causes of the general distress, should pretend and affect to say that the subject was of such a very *delicate nature* that it ought not to be at any time mooted, he was not surprised at; but that men suffering by the fraud could *continue* to be so deluded, he really was astonished at their simplicity; it reminded him of the well-dressed shop-lifters, who, when detected in their schemes, affected to have their feelings *hurt* at the charge. Mr. Medley stated that the *late* Sir Robert Peel had asserted to him, that his son's conduct in that bill bearing his name, excited his decided disapprobation, and that he, the father, had warned him of its fatal consequences. Mr. Medley pointed out the folly of imagining that a much less circulation than that we enjoyed during the war could *do now*; that we were at peace since the same property, with a very considerable increase, still existed, and of course required an adequate increased representative, instead of a diminution so serious as had now taken place—he exposed the folly of locking up our gold in this country instead of using it as an article of merchandize, and thus preventing the nations of Europe, who would be thus enriched by it, from trading more extensively with us; these nations (he said) could not, like England, use a paper currency—they had not sufficient credit for it—why then (said he) deprive them by your absurd metallic law of the only or principal means of their so doing? It was like (he said) breaking a man's arms and then reproaching him with an inability to fight. Mr. Medley stated that he had been one of the most considerable discounters in London for twenty-two years; during which period, he had discounted very many millions annually; that he had therefore an opportunity, (as was truly stated by Mr. Spooner) of seeing the fatal effects of Peel's bill on every branch of British industry—he conjured the agriculturists to form a *third party* without loss of time, and to rely on no one *but themselves* for extrication from their distress. He ridiculed the idea of anticipating relief from any other measure than an alteration of the currency, which he recommended to be done by the substitution of a silver standard, at 5s 6d the ounce—this (he said) would preserve the metallic standard, which all parties were so anxious for (he confessed he knew not why, and he doubted if they could) and at the same time release the mass of gold now laying idle in this country and not performing its operations of currency—he was confident (he said) that in one year such a state of *permanent* activity and prosperity would arise that no man could hardly at the present moment contemplate—he deprecated anything approaching to an unlimited paper issue, but urged the necessity of a just and liberal expansion of our currency on a metallic basis in proportion to our increased capital as necessary for the salvation of the country; any attempted relief by taking off the *whole* of the local taxation or any other petty despicable measures would only end in bitter disappointment—it would only be adding insult to injury. The hon. gentleman was listened to with deep attention, and concluded amidst loud cheers.

Mr. BRAILSFORD stated that he had been deputed by the Lincoln Agricultural Society to convey to the general meeting the sense that they entertained of the necessity of investigating the currency question, for unless that course were taken, all means of relief for the farmer would prove futile. (*Hear.*) The Society had instructed him, on Friday last, to hand

the resolutions in question to the meeting, and the first resolution was in favour of a change of standard in value from gold to silver.

Mr. HARCOURT, President of the South Bucks Association, proposed the first resolution, which was seconded by Mr. MEDLEY and unanimously carried. "That the condition of Agriculture is at this time depressed beyond precedent, and demands the immediate attention of the Legislature."

Sir WM. YOUNG, Bart., M.P., again presented himself, and after some observations on the different opinions that prevailed as to the cause of agricultural distress, proposed, the second resolution, viz.—"That petitions be presented to Parliament, praying that a select committee be granted to inquire into all the causes of the distressed state of the Agricultural interest, with a view to its immediate relief."

J. EAMES, Esq., in seconding the resolution, observed, that a member of the House of Commons had stated at a meeting at Worcester, that agriculture was not in the depressed state that some persons represented it, and that he lately had visited a district where it was flourishing, and, when called upon to name, the honourable member mentioned Leicestershire. Now it so happened the honourable member had made a three or four days' visit to the very hospitable mansion of a lady with a fixed income, who resided in the very centre of the county that had deputed his friend, Mr. Hassels, and himself, to attend the present meeting, and he was sure he spoke the sentiments of the Society, consisting of nearly 200 members, when he declared the agricultural interest was in a state of depression never before remembered by any member of the county. Did the hon. member, form his opinion while sitting at the bountiful board of his hostess, or from the cursory glance he took of the farmers in their best coats, as he passed by the corn market where they were assembled?—surely the hon. member did not wish to see the English farmer at market with his coat out at the elbows, for when men have seen better days they do not like to proclaim to the world their altered circumstances. Mr. Eames declared the first resolution would be highly approved by the society to which he had the honour to belong, and concluded by seconding the resolution moved by Sir William Young, which was carried unanimously.

Mr. GIBLIN, one of the Cambridge Deputation, detailed his farming experience for upwards of forty years—demonstrating the intimate connexion between corn and currency; emphatically declaring, that he was ready to mount his cavalry-horse, and shed the last drop of his blood sooner than allow the last shilling to be drained from him.

Mr. MONTGOMERY MARTIN stated that he had accepted with much pleasure an invitation to attend the meeting: he dwelt on the necessity of the farmers combining for the purpose of procuring relief—reminding the assembly, that the House of Commons granted a committee of enquiry into the state of agriculture in 1833—excluded by a bye resolution all investigation into the monetary system, and then announced that the best mode of relief for the agricultural distress was an abstinence from all parliamentary interference. It was clear that ministers would do nothing of themselves—indeed, one minister stated last session, that a sunshiny day would have more effect on agriculture, than any legislative enactment. He (Mr. Martin) had applied to the Government to revive the Board of Agriculture, in order that the farmers might have some legitimate organ for the communication of their wishes and feelings to Government. But Mr. Spring Rice, (the Chancellor of the Exchequer) declared by the following letter to Mr. Martin, that the Government would do

nothing of the kind, because they thought such a measure would be of no benefit to the farmer! (*Hear, hear, hear.*)

Downing-street, Sept. 8, 1835.

Sir,—I am directed by the Chancellor of the Exchequer, to inform you, with reference to the conversation which passed between you and myself, a few days back, that the government has no intention whatever, of reviving the Board of Agriculture, as they do not conceive that the measure would be conducive to the good-being of the agriculturists themselves.

I am, sir, your very obedient servant,

S. E. SPRING RICE.

He asked the assembly whether the Board of Trade, particularly as at present constituted, was of any use to the farmer? (*Hear.*) Was it not on the contrary decidedly inimical to their interests? (*Cheers.*) Mr. Powlett Thompson, a young man—erst connected with the Baltic trade, was now at the head of the commercial department of this great country, and had openly declared his desire for a free trade in corn, and for lowering the protection which the British landlord now rightly enjoyed against Baltic timber. (*Loud cheers.*) Mr. Thompson had refused the corn returns moved for by Mr. Dilwynn after those returns had been granted by the Treasury, and by the House of Commons. (*Hear, hear.*) Mr. Martin, after adducing other arguments, contended that it was now necessary for the agriculturists to combine their powers and demand from government a comprehensive inquiry into their condition. (*Cheers.*) Lord John Russell had stated the other day at Bristol, that Catholic emancipation was denied to reason and justice, but conceded to intimidation and menaced violence; and it would doubtless be remembered how much parliamentary reform was indebted for its success to the united efforts of societies. He (Mr. Montgomery Martin,) was, constitutionally speaking, averse to the union of societies or bodies of men for political objects, as their natural tendency was to overawe the deliberate wisdom of the legislature. Nevertheless the present case was an exception to the rule, otherwise the great object in view would never be obtained. (*Cheers.*) He (Mr. M.) was desirous therefore, of seeing a Board of Agriculture established in London, and as ministers had, most unwisely, and from the absence of that foresight which ought to characterize those who pretend to be statesmen, refused to take the initiative, it behoved the farmers of England to rise from their supine condition, and co-operate for their mutual protection and support. (*Cheers.*) The object in view, was to centralize the numerous associations scattered throughout the country and now so powerless for want of union. Let all party distinctions and minor differences be abandoned—let their grand effort be the instant establishment of a London Board of Agriculture, to which deputies be sent from every part of the kingdom previous to the opening of parliament, so that government may be compelled to acknowledge the distressed condition of agriculture in the King's speech, and their determination to inquire into the causes thereof; let the Deputies adjourn their sittings from time to time, watching carefully the proceedings of Ministers and Parliament, and conferring with their constituents, not abandoning their posts until measures of full and satisfactory relief be devised and accomplished. (*Loud cheering.*) The hon. gentleman also contended that a Central Board of Agriculture would be of the utmost importance in many other respects, in collecting information as to tithes, to local and county rates &c., in demonstrating that poor laws for Ireland is an English question, and especially in aiding the application of chemistry to promote agricultural improvement and in encouraging new and useful implements of husbandry, &c.

The hon. gentleman, after offering several other observations to the meeting, moved, amidst great approbation, the third resolution, which was seconded by Mr. Twiss of Cambridge, and carried.

"That heretofore all efforts to obtain from the govern-

ment or from parliament, efficient relief for agricultural distress, have failed, and inquiry has twice been refused owing to the divided state of the agricultural body, and their want of co-operation :—

"It is therefore advisable that the various agricultural associations now scattered throughout the kingdom, and hitherto powerless for want of union, do concentrate their forces, and form a grand Central Society or Board of Agriculture, in London."

R. BROWN, Esq., on moving the 4th resolution said, that having taken a part in the proceedings at Framlingham, on the 3rd inst., the meeting had done him the honour to name him one of the deputation to represent the agriculturists of Suffolk upon the present occasion. In discharging that trust he had to lay before the noble Marquis and this meeting, the 6th resolution passed at Framlingham, viz.:—"That a deputation of the East Suffolk Society be appointed to take part in the proceedings of the meeting to be held at Aylesbury on the 12th inst.; at the same time to lay the above resolutions before it, and convey to Lord Chandos the assurance of the confidence of this association, and the hope that its proceedings of this day may meet with his lordship's concurrence, and the support of the agriculturists of Buckinghamshire." The resolutions referred to were resolutions declaratory of the truth, that "the Agriculture of the kingdom was the first of all its concerns, and that it is essential for the peace, welfare, and security of all classes of society, that it should be relieved from its present state of overwhelming distress, by an early and active interposition of parliament," and that it was the conviction of that meeting, as he was now happy to find it was of this, that "the formation of a Central Society in London for giving full effect to the objects of the local agricultural societies would be of the greatest utility to the Agricultural interest." Mr. B. remarked that after having laboured assiduously for several years to promote the formation of a CENTRAL AGRICULTURAL SOCIETY, as the only means of procuring relief from the general distress, it was with the highest gratification that he found himself surrounded by parties, unanimously favourable to that object, who represented a large and influential portion of the agricultural body. The tenantry of England for a long series of years had remained suffering and passive—until submission had become imbecility, and apathy crime. They were determined, therefore, from motives of self-preservation, to merge all minor differences of opinion, and to centralize their power under one common head. That accomplished they would then, shoulder to shoulder, crush down in rotation, every opposing circumstance that should militate against the tranquility, the industry, and the welfare of the classes connected with the soil; agriculture was of no politics, it was neither Whigism, nor Toryism, nor Radicalism—and the CENTRAL ASSOCIATION would have no other object or aim than to insist that "on every state the first creditor is the plough, and that in this kingdom, this indefeasible claim shall supersede every other demand." (*Cheers.*) The public welfare required this, for "THE AGRICULTURE OF THE KINGDOM IS THE FOUNDATION OF THE NATIONAL PROSPERITY IN EVERY OTHER MATTER BY WHICH THAT PROSPERITY IS PRODUCED." Agricultural distress had now reached that pitch when for its melioration the land-owners of England and the land-occupiers must go forward together, or the land-occupiers would go forward by themselves. Complaints, not loud but deep, existed, that the rent-receivers were callous to the sufferings of the rent-payers, but he deprecated the idea that the time would ever arrive in which the two classes should cease to consider their interests as common, or refuse cordially in defence of those interests to go hand in hand. The noble Marquis by whose invitation they had met together, had ever been looked up to as the farmer's friend; and in proffering him the confidence of the agriculturists of Suffolk, he felt assured that their resolution embodied the opinions of the whole farming interest of England (*Hear, hear.*) He would, therefore take upon him to propose for the adoption of the meeting a resolution to the effect that the noble Marquis be invited to become the chairman of the provisional committee for organizing the CENTRAL SOCIETY.

(*Loud cheering.*) And he hoped the noble Marquis would not refuse to accept of the post of honour to which the urgent necessities of the farmer, the common safety of the state, and the general well-being of the people called him. (*Loud cheers.*)

R. SPOONER, Esq., rose to second the motion, which he said he did with the most heartfelt pleasure. Deeply he regretted that circumstances should ever have arisen in this great and wealthy kingdom to render a confederation of the agricultural interest necessary. But these circumstances had arisen—circumstances the most exigent, circumstances no longer to be trifled with or to be postponed—and he saw no effectual means of relief, except by uniting the forces of the whole agricultural body, and taking that position which humanity, virtue, and patriotism as well as necessity, called upon them to assume. (*Loud cheers.*) After passing a most eloquent eulogium on the conduct of the noble Marquis as the firm, steadfast, unflinching, tried, and unfailling friend and champion of the British farmer, he concluded, amidst the loudest demonstrations of applause, by seconding the motion, which was unanimously carried.

The Noble Marquis returned thanks to the meeting for the honour which they had done him by passing the last resolution, but begged to decline the Chair of the Provisional Committee for organizing the Central Society. This he did from no want of zeal for the cause, but because he thought as President of the Bucks Association, he could not give his effective attention to both. After some conversation, the meeting expressed a strong hope that the noble marquis would consider the matter, and not give a final answer till the General Meeting on the 15th Dec., which his lordship promised to attend.

WILLIAM SHULDHAM, Esq. addressed the meeting, and stated that he had long been endeavouring to impress upon the agriculturists of Suffolk the absolute necessity of adopting stronger measures for relief from distress than what had hitherto been adopted. He was now happy to say that these feelings were participated by the agriculturists of his county and by the country generally. He considered the formation of the Central Society would give the landed interest a power in this kingdom which they had never yet possessed; and would be productive of results which would speedily raise the condition of the whole producing classes. In order that the Central Society may be organized in a manner that will entitle it to the support of the agricultural interest throughout the kingdom, he had much satisfaction in proposing the fifth resolution:—That it is the opinion of this meeting, that a meeting of Agriculturists be holden at the Freemasons' Tavern, London, at 12 o'clock, on the Tuesday after the Smithfield Show, for the purpose of forming a provisional Committee, with the view of finally organizing the Central Society, consulting as to the cause of agricultural distress, and what measures shall be adopted for its relief, on which day Deputations from each of the local associations be invited to attend.

JOHN MOSELEY, Esq. President of the East Suffolk Society, seconded the resolution, which was carried unanimously. Mr. M. remarked that he had been a member of the Board of Agriculture, and never could understand why it should have been dissolved. He expressed his conviction that the greatest good would arise to the agriculturists, in especial, and society in general, from the establishment of the Central Society.

W. MEDLEY, Esq., moved the 6th resolution, which was seconded by Mr. KIMPTON, Hertfordshire, and unanimously carried.—

“That R. Montgomery Martin, Esq., and R. Broun, Esq., be requested to give their assistance to such provisional committee as joint honorary secretaries thereof, and adopt such measures as they shall think most

advisable for the purpose of obtaining a numerous attendance of parties interested in the welfare of agriculture.

R. SPOONER, Esq., proposed, and Mr. THURNALL, President of the Cambridge Society, seconded,—“That the distress of the landed interest first commenced when the present standard of value was adopted, a standard of value which had never been the standard of value in this country, but was a new and arbitrary standard, although it was adopted under the specious pretext of returning to the ancient standard:—that the effect of adopting that standard has been more than to double all the then fixed burdens and encumbrances, and to lower the value of land and the price of produce to one half, and that nothing can save the landed interest from ruin but the adoption of a just and practical standard.” Carried with only three dissenting voices.

It was proposed by Mr. MEDLEY, and seconded by Mr. UMBERS, of Warwick—That it is due to the interests of the British farmer that a system of Poor Laws should be introduced into Ireland.

Carried unanimously.

Mr. TWISS proposed, and Mr. SPOONER seconded, That the cordial thanks of every one present, be given to Lord Chandos.

After the business of the day, a large party dined together at the George Inn, Lord Chandos in the chair, at which many excellent speeches were made.

RIGHT OF FARMERS TO KILL RABBITS—This question has been decided by a Court of Justices of the Peace, in the county of Kincardine, under the following circumstances:—A tenant on the estate of Rickarton, whose farm has been much infested, and his crops seriously injured by rabbits, employed a vermin killer to destroy them; upon which a gentleman, who holds in lease the game on the estate, instituted four separate prosecutions for penalties against the person employed, founded on the Act 2d and 3d William IV., c. 68, for the prevention of trespasses upon property by persons in pursuit of game. One of the cases came on for trial at Stonehaven, on the 2d inst., before a bench of four Justices. The vermin killer proved that he had been employed, and had acted openly as the servant of the tenant; and, on the part of the tenant, it was pleaded that he was entitled by law to destroy rabbits; in support of which plea, reference was made to the decision of the Court of Session in the case of Sir David Moncrieff v. Arnott, in 1828, by which it was found that rabbits are not game, and that a tenant is entitled to destroy them on his farm, in order to prevent damage to his crops. On the other hand, the prosecutor contended that the statute founded on by him had taken away that right, having, indeed, as he stated, been passed for the very purpose of correcting the decision in the case of Sir David Moncrieff v. Arnott. One of the Justices was of opinion that a tenant suffering damages by rabbits injuring his crops is entitled to recover the amount from his landlord; but that the statute founded on now prevents his killing the rabbits without the landlord's leave; and, therefore, that in this case a trespass had been committed, and the statutory penalties incurred. Two of their Honours, one of whom was the Sheriff Substitute, were clearly of opinion that the act does not apply to the case of the tenant, or a person employed by a tenant, *bona fide*, in destroying rabbits on his farm, for the preservation of his crops; that the decision in the case of Sir David Moncrieff had not been affected by the act, and could not be considered as taking away the right of tenants which that decision had established; and that the tenant, in this case, was therefore perfectly justifiable by law in what he had done. The remaining Justice was of opinion, that the leave of the landlord was rendered necessary by the statute in question for entitling a tenant to kill rabbits; but on the ground that the evidence adduced gave him reason to think leave had been granted in this instance, he was not inclined to convict. The complaint against the vermin killer was therefore dismissed, one of the Justices dissenting.—*Aberdeen Herald*.

## AGRICULTURAL REPORTS.

## NORTHAMPTONSHIRE.

The past month affords us little scope for observation on rural affairs. The farmer's principal occupation has been wheat-seeding, and from the rain that commenced on the 24th, much of the strong land remains unsown; however, it is quite *vice versa* with the red land farmer, who does not mind how much it is smeared in, as it generally assists in the destruction of the poppy and other troublesome weeds. The breadth of wheat sown this year is not so great as usual, owing to the extreme low price it makes, and which, but for the failure of the turnip crop, would have been still smaller. We perceive that where part of the turnip crop has failed, in many instances, wheat has been sown. We certainly do not commend the plan, as the return will not be quicker than if all was sown with barley in the spring, and as far as this year goes, barley certainly pays the best. The wheat being good, and much of the up and down land being in a pulverised state, on account of the congenial rains, the early sown has made its appearance, and with a good bold blade. It is very necessary that crows should be well-watched during the time the wheat is chitting, or they will do much damage. We have seen a plan that is frequently resorted to in many parts of England, and certainly with great success; as it is a cheap one we shall recommend our agricultural friends to try. Procure a ball or two of that hemp thread which shoemakers use, and fasten it to the top of sticks about three feet high in a zigzag direction all over the field, and the crows will rarely attempt to settle. We perceive that several of our largest and best farmers have introduced a new plan, (and certainly as far as we can learn a profitable one) of sowing winter beans with tares. They should be sown not later than October; the tares may be eaten off with sheep in April or the beginning of May. The system was introduced into this country, we believe, by a large practical farmer and breeder of sheep, and the result has been very gratifying to those who have tried it. A new kind of winter oat has been tried by one or two of our friends; but of course we cannot speak respecting its merits until another year: it is highly recommended by many eminent agriculturists as producing not only an abundance of food in the autumn and spring, but also large produce when thrashed. A great many vetches have been sown, also a large portion of rye and trifolium; we expect, therefore, a good supply of keep in the spring, as they look promising at present. Potato digging is nearly finished, and, as we before stated, will turn out very bad; the quantity of acres grown is so large, however, that many quarters have been sold at 8s, proving at once that there is no scarcity; the best eating potatoes for family use have been sold as high as 20s per qr. The poor man who pays a high rent for his land will have much to do to raise the amount, to say nothing of his own time and trouble. Owing to the heavy rains which fell on the 24th of last month many hundreds of sheep were driven out of the meadows (which until then had afforded good keep with dry layer) and put to turnips, which we fear will be found to go off very fast, although they have certainly improved; still the later sown ones will produce very little keep, except for a few ewes and lambs in the spring. Many acres have been sold,

and many hundreds of sheep put out by the head; the price per acre varies of course, according to the crop. White ones from 4l. to 5l. per acre; Swedes from 4l. 10s. to 6l. 10s. By the head:—tegs 5d to 6d; sheep 6d to 8d; of Swedes and cut, the latter price. The immense quantity of hay and barley straw, will in a great measure, help out for the failure of the turnip crop. Store beasts are taken into the straw-yard by the week at 1s 3d per head. The thrashing machines have been fully employed all the month, and some difficulty has been found in procuring them—signs, we confess, we are sorry to witness. As most of our contemporaries are grumbling about the badness of the farmers' prospects, we certainly hope to be allowed to advocate their cause in a quiet, but consistent manner. It must, of course, be evident to every sensible mind, that the quantity of grain forced into the market at this early period, is to meet the demands of the landlord. It would, therefore, in our opinion, be a great good, and charitable act, if the Michaelmas rents were put off till a later period. We remember well the time when the steady practical farmer generally had funds enough in his bankers' hands to pay all demands upon him at any day when called upon. Unhappily the case is now quite the reverse; and it is a distressing circumstance that the needy man should be compelled to force his commodities into the market, however bad the price may be. But such is the case. To judge of a man's present situation who took a farm on a long lease, we lay before our readers the average prices of wheat from 1811 to the present time:—

|                                          |     |     |
|------------------------------------------|-----|-----|
| For the five years ending 1816 .. ..     | 88s | 2d  |
| Do. Do. .. .. 1821 .. ..                 | 74s | 0d  |
| Do. Do. .. .. 1826 .. ..                 | 56s | 1d  |
| Do. Do. .. .. 1831 .. ..                 | 62s | 10d |
| In 1832 the average was .. ..            | 58s | 8d  |
| In 1833 .. ..                            | 53s | 1d  |
| In 1834 .. ..                            | 46s | 2d  |
| For the present year it will not average | 40s | 0d  |

No human sagacity could anticipate such a dreadful fall as the above table exhibits. We leave the results to such well judging minds as are more capable of estimating the expenses of growing wheat than we are. Our markets for corn have been rather better for barley; the same depression has been felt in wheat as in our last report. We certainly are unwilling to find fault with the respectable body of corn merchants that attend our markets, but if there is not a combination there is certainly no competition, for they one and all bid and give the same price for all things, but more especially in the barley trade. Oats still maintain their price, and very few are shown; we have seen new ones sold as high as 30s per qr., but these were extraordinary fine ones. Our fairs throughout the country have been dull. Sheep have materially deteriorated in price during the past month; some very useful lambs have been sold at from 20s to 25s per head, and shear hogs from 25s to 30s do; ewes are also considerably lower. The wool trade remains stationary. There will be about 4000 bales of German and colonial wool offered for sale in the early part of the month, which may perhaps cause a dulness in the trade. There has been no material alteration in the meat markets with the exception of pork, which is readily sold at from 9s

to 10s per score. This time last year it could hardly be turned into money, yet the importation of Irish pigs is as large as in any preceding year.

### BERKS.

The variable weather throughout great part of the last month has not been unseasonable, but during the last few days there has been some very heavy rains, and some sorts of land are now become too wet to sow with wheat. The sowing has proceeded as fast as manure could be procured, but there is still a vast breadth of land to get in in some parts of this county. For several years past we have had very mild winters, and the backward sown wheat has produced more per acre than what was sown early; and the consequence is, that the farmers are now in the habit of delaying their wheat sowing two or three weeks later than usual; but the time will doubtless come when there will be a severe winter, and when the early sown will be by far the most productive. The cold wet weather has kept back the wheat from coming up so quickly as we expected, but where it does come up it is mostly with a healthy blade and free from weeds, and seems more likely to stand a severe frost than when it comes up so very quick. We have not heard of any complaints respecting the slug or wireworm, but nearly the whole of the wheat that has made its appearance is thick on the ground and has kept its stock well; but the pieces which have recently been sown are every day nearly covered with large flocks of wood-pigeons, starlings, larks, and other small birds, and all in search of the seed that was not well covered, and we fear that in some instances they will do a considerable mischief; a hard winter is much wanted to lessen the number of these depredators. The land is now become too wet either to tread with sheep or to use the presser or wheel-roller, and it is now impossible to get it so firm at bottom as it ought to be, and we are fearful that on this account the late sown will not stand so good a chance for a productive crop as that which is worked down firm. The trifolium in some places is quite dead and the land sown afresh, and there is much more of it looking of a sickly hue, and not at all like to stand the winter, but on some warm rich soils it at present looks pretty well, and promises a fair crop; but to depend wholly on this plant for spring feed, would, we think, be most unwise, for the young plant is often eaten by insects, and its roots so near the surface that it will be extremely liable to be injured by severe weather, and for green food it lasts but such a short time before it gets into seed, that as a substitute for vetches to feed stock with, it cannot at all be depended upon; nevertheless, it is acknowledged on all hands, that in a green state it is most excellent food for either horses or sheep. In consequence of the failure in the trifolium, many persons are now sowing winter vetches, but we still think that after all, there will not be the usual quantity of vetches sown; and if the trifolium should be altogether destroyed by a hard winter, many of the farmers will find themselves in a still worse condition in the spring for want of sheep keep than they are at the present time. Seed vetches are not very plentiful, and they are still readily sold as high as 5s per bushel. Vetches, rye, and winter barley all lie a long time in the ground before they vegetate, but most farmers consider this circumstance in favour of the crop. We have had a few frosty mornings, and some very boisterous winds, which together have nearly stripped all the trees and underwoods

of their leaves, and in some places the cutting of the copses will commence immediately. The value of underwood, like that of timber, is very much depreciated; and owing to the failure in the turnip crop, hurdles are at present nearly unsaleable, and hoops also sell badly, and there is no sort of wood but that which is cut out for the fire which at all retains its value. Although we have had some warm days, yet we never saw the grass grow less in October than it has in the present year, and although the weather has seemed to be pretty favourable for vegetation, yet there has been nearly a complete stagnation in the growth of the young turnips, grass, meadows, and pastures, and feed is become now so scarce that few farmers have any thing to rely on but hay and fodder until next spring. Sheep are now lower in price than they have been since the ruinous year of 1822; but it is the general opinion that they have reached their lowest point, and at the last fair or two they seemed to be looking rather upward in price. Mutton and pork continue to sell pretty well, and as the few sheep that are at all fitting for the butcher must soon be brought into the market because there is no food that will improve their condition, and as but few sheep can this winter be fattened from the same cause ready for the spring market, it is believed by many that at that time mutton will be high in price. The potatoe crop is a bad one, and in this part of the country it produces only a third of the quantity that it did last year. We see no reason as yet for altering our former opinion respecting the crop of wheat, for although a few late sown patches after rape and turnips may yield pretty well, yet the produce of the principal part of the land will, we are convinced, notwithstanding the abundant crop of straw, be about eight bushels per acre less than it was last year. The price of wheat at the present time is most ruinous, and good fair flour is selling at Newbury at sixpence halfpenny per gallon, and the very best at nine-pence. We have heard of our great grandfathers boasting of their purchasing a gallon of flour and a pound of cheese for a shilling, but it can now be purchased as low as ten-pence; but hundreds of poor creatures will soon find ten-pences more scarce than guineas were a few years ago. No man living can remember common food so cheap as it is at the present time, and never were the producers of this food so badly off. The quantity of barley per acre is on the whole we think greater than it was last year, but the yield out of the rick or mow is acknowledged by the old men to be worse than it has been these 50 years, and it in general takes a good load of straw to produce a quarter of barley. The Chevalier is inquired after, and fetches a high price; but it is so quick of vegetation that it will not do to malt along with other sorts, as it is ready to go on the kiln several days before any of it. In a wet harvest, being so quick of vegetation, we think it will be completely spoiled before the common barley sustains much injury. We are still of opinion, that with great care, and a *superintendence of the process by the master*, the smut in wheat may generally be prevented. The writer of this has occupied three farms, of different soils and in different situations; he has planted annually for 30 years upwards of 100 acres of wheat, and yet he has never sold a load of wheat for one penny the less in consequence of smut, although many farmers in the same situation, and whose land is adjoining that which he occupies, have at times sustained great loss. Smut, in our opinion, arises entirely from negligence; but when once

obtained is not easily got rid of, for the barn-planks, the fan, the sieves, the bushel, the sacks, the seedlip, and even the very chaff and manure is contaminated with the dust, and will propagate the disease, and many farmers being ignorant of this circumstance, often wonder how it is that their crop is smutty, and ascribe it to soil or the situation of the atmosphere, or any thing else but the true cause, and it will be impossible to convince them of their mistake, for so long as there is deception amongst servants, and those servants are employed by negligent masters, there will be smut in wheat, in spite of all that we can say or do. Old wheat is never smutty, except it comes in contact with new dust, as the old dust has lost its power of propagation. The bearded or cone wheat and the red wheat are not so liable to smut, because they are thicker in the skin; but even the cone wheat can be made smutty if you scrape off a part of the bran, and inoculate with the dust of the new smut-balls. Every experiment we have ever tried has convinced us that it is the dust from these balls that is the whole and sole propagator of the disease.—Nov. 2.

#### OXFORDSHIRE.

At this season we have but little to report, we begin as usual with the state of the weather, a matter of vast importance to the English farmer. During the last month we had rain in abundance, which greatly impeded the wheat seeding, so as to delay the finish of this very material branch of husbandry to a later period than usual; some little still remains to be done; what was done when the land was too wet sadly poached, and must render the crop doubtful. The last week or ten days has been much more favourable, and both wheat and vetches have been put in under better circumstances, although late; and winter ploughing is done in a kind and mellow state. The wheat has laid a long time in the ground; the last week has, however, caused it to spring up.

We must again report unfavourably of the turnip crop; owing to the superabundance of moisture, together with cold nights, the stubble turnips have made but little progress. Swedes also have gone on badly, for where the plant was a good one in point of numbers, yet owing to insects preying upon the bulb, the plants are so impoverished, that the tops are wasting away, consequently growth is entirely checked, and were not hay and straw plentiful, the loss would be severely felt; still it must have an effect on the meat markets ere long. At our recent fairs store sheep could scarcely be turned into money. Our corn markets have continued much the same for barley and oats, but wheat is something better, and old beans being rarely to be met with have realised more money, fine ones being worth 6s. per bushel. As thrashing proceeds, the yield of barley from the mow is more and more found to fall short of the expectations formed. Potatoes are now taken up, and the produce is in most instances bad indeed, and will be severely felt by the labouring poor. Fat pigs have been in request, and are selling at 8s. per score.—Nov. 21.

#### PERTSHIRE.

Throughout the past month the weather has been very variable. Some days of serene weather enabled farmers to get up their potatoes; and this operation has, with few exceptions, been concluded. The return is various, according to the nature of the soil and the period of planting; but in general is far below an ordinary average, and a

much greater proportion than usual is too small for the London market.

On retentive soils, sowing of wheat was delayed till a much later period than usual by the rains, and a very favourable seed bed has not been obtained; and even in the lower districts, wheat fields are yet scarcely distinguished by their green appearance. On dry bottoms the seed bed has been more kindly, and the braid is more regular and vigorous.

Turnips continue in a growing state and free from mildew, but from the excess of moisture in the soil they have not accumulated much weight in October. Thrashing has commenced, and the crop turns out as anticipated in former reports. Wheat presents a rather rough sample, and bakers dreading sprout have purchased freely from England. English barley has also been brought here, but an ordinary supply may yet be found of this grain at home with a little to return to the English maltster—much being in fair condition for malting. Several beautiful and weighty samples have already appeared in market—some of the Chevalier variety weighing from 56 to 57 lbs per bushel. The climate in this part of Scotland seems calculated to raise oats in perfection, and competitors in quality from any other quarter need not be dreaded. The most favourite varieties now cultivated are, the Old Copar Grange, the Drummond, the Potatoe, the Red Early, and the Hopeton—the Georgian has long since disappeared. In the Mearns there is a fine old variety called the Kil-drummie; and in the Lothians the Dun oat is cultivated, besides several rarer varieties of Black, Red, and Tartarian—from which profitable selections might be made, and improved varieties obtained.

In the corn market, wheat is at present scarcely saleable except for seed; good samples of Chevalier barley bring from 28s. to 30s. per qr., in other sorts of grain little has hereto been done.

In the cattle market, prices are very low—and for lean stock, prices are not likely soon to advance. Horses bring less money than for some years past. Sheep bring fairer prices. Hay being rather scarce brings about 9d. per stone, old weight. Potatoes have already been shipped in unusually large quantities for the period of the season, and bring about 10s. per boll.—4th November.

#### BEDFORDSHIRE.

The wheat seeding, on the southern side of the county, was pretty generally completed as the last month closed upon us, but not so in other parts. Upon the clay soils it has been a most difficult process, and will in many instances be hardly got over by the middle of the month. The early sown comes up pretty well, but slugs are very numerous, and where the land is left hollow, they are committing great ravages both upon the wheat and the winter tares.

The potatoes and mangel wurzel are for the most part got up; the former is a very deficient crop, especially upon the early gravels; the latter is not extensively grown here, but where it is cultivated, it is, this year, generally very superior to turnips. Of this crop (the turnips) we have no occasion to amend our former report concerning them,—they are bad almost without a precedent. The Swedes are infested with an immense number of brown grubs, rather of the caterpillar species, so that where there is a plant (which is by no means general) they are full of holes, and of bad quality, while the common sorts are almost a universal failure.

**THE ANNUAL MEETING OF THE BEDFORDSHIRE AGRICULTURAL SOCIETY.**—The meeting was held on the 2d of last month, and the ploughing match took place in a field kindly provided by Mr. Manning, of Elston, a highly respectable farmer, whose success in the ploughing field of this society is rarely surpassed. The competition was considered unusually great, and the adjudicators had much difficulty in awarding some of the premiums. Mr. Manning was declared first, Mr. S. Bennett second, with several others hard upon their heels. We believe all the winning ploughs were of Messrs. Ransome's manufacture, though there was some remarkably correct work done by a Scotch plough, with wheels, belonging to his grace the Duke of Bedford, and but for the man laying his work too flat for harrowing, it must have stood very high upon the list. The show of stock was not large, but there was a very excellent wether sheep, of the pure Leicester breed, shown by Mr. Bird, of Beeston, which took the first prize, as also a very useful one, belonging to Mr. John Bodger, of the mixed Cotswold and Leicester, which won the second prize; and among the extra stock was a very handsome young short-horned bull, shown by Mr. S. Bennett, of Beckering's Park.

The company dined, as usual, at the Swan Inn, Bedford, which consisted of the most noble the Marquis of Tavistock, Lord Charles Russell, M.P., Francis Pym Esq., President, William Stewart, Esq., W. H. Whitbread, Esq., &c., &c., with a large body of the most respectable agriculturists of the county. After the awarding the premiums for ploughing, for the best sheep, and also to a large number of servants and labourers in husbandry for long and faithful servitude, a very interesting discussion took place upon the breed of sheep, occasioned principally by Lord Tavistock reading a very able letter from the Duke of Bedford, upon the propriety of keeping the different breeds of animals distinct, and at the same time offering an additional premium for the best pure half-bred Leicester ram. The discussion was carried on with spirit; the breeders of the pure bred Leicesters contending, of course, for superiority, while those who had been crossing with a Cotswold ram, contended that they had got a more useful and profitable description of sheep.

The subject is a very knotty one, and one of the greatest importance just now, but when wise and great men are at issue, for your reporter to give an opinion would probably remind his readers of the sentiment we have somewhere met with, that "Fools rush in, where angels fear to tread." It is admitted, however, on all hands, that the first cross of almost any pure bred animals will produce a very useful description of stock; but it must be equally admitted that by going on with the mixed breed, you are sure to inherit the bad qualities of both breeds. This was very ably treated on in the noble duke's letter, and it is certainly confirmed by very extensive experience. Our paper is too nearly exhausted at present to go into this subject farther, even if we could muster sufficient confidence; but as we have no interest to serve but that of society, and as we are wont to give our opinion fearlessly, at some future time, in all probability, we may direct our agricultural readers to this subject more at large.—Nov. 6.

#### EAST RIDING OF YORKSHIRE.

The weather through the whole of the month has been highly favourable for sowing wheat, and it is only in peculiar situations that it can be con-

sidered to have been too wet for putting this seed into the ground with advantage. If, therefore, it were possible to prognosticate upon the produce at the time of sowing the crop, we might augur favourably of it; but that this is not the case is proved by the result of the past year. The seed time was inauspicious in the extreme—the land was so dry that the wheat was not generally put into the ground until long after the usual period, and what was sown before the very end of October came up thin and at different times—yet the crop has turned out more than usually productive. It is in vain to attempt to prophecy in these matters; all that we can do is to state what is present and what has passed. The potatoes are small in size and below the usual quantity—300 bushels per acre is this year a full crop, and the average is below 200. Turnips are deficient on the whole, though in particular instances they are found excellent. Grass has been plentiful through the month; and perhaps in the town districts the growth of it has been such as to justify some fears for the effect that it may have upon the sheep. Should the rot again appear, it would give the finishing stroke to many of those farmers who have yet held up under the losses that have accumulated upon them during several past years. We would earnestly recommend the free use of salt for the flock; we will not assert that it will cure the disease when fully established, but it is certainly an antidote, and acts powerfully as a preventive of rot. A very small quantity of corn scattered over the salt troughs will soon give the sheep a relish for it, and the expense is too trifling to bar the constant use of it. The fall in the value of sheep and cattle of all descriptions, which commenced in September, has continued to the present period. Wheat, 34s., barley, 26s., oats, 16s. per qr.; beef and mutton 5s. per stone; and store stock almost unsaleable. We cannot quote these prices without adverting to the melancholy situation in which farmers are now placed. Year after year but adds to their distress, and the wonder is, not how many have sunk under it, but that so many should yet remain able to cultivate the soil. Much longer this state of things cannot continue, but brave men will not fall without a struggle; and we would hope that not only every land owner and land occupier, but that every man, whatever be his business or profession, who lives by these two classes, will unite in pouring petitions to Parliament to relieve, if possible, the great mass of the people of Great Britain from the ruin which hangs over them.—Nov. 3.

**CARSE OF GOWRIE.**—Wheat on low lying rich fallows is bulky, but the quality indifferent. On the Braes the return has been fair, and the quality fine. A new variety has been lately introduced, called the 'blod-red,' which promises to be very prolific, not liable to lodge, moderately early, and a fine plump sample: it is something like the golden Essex variety, but the sample more plump. The farmer must now look about him for improved varieties of seed, or, in boxing phrase, "he must go to the wall." The Chevalier barley has been introduced to the district, and has had a fair trial; the result is such as to ensure extended culture. This part of the crop turns out well, and may prove remunerating. Oats turn out an ordinary average at the mill. The Hopeton oat still maintains its character—the only drawback being a liability to seg-root. The return of potatoes is indifferent. On moderately dry soils they are small, scabbed, and not much above three-fourths of an ordinary return. On very dry gravelly bottoms, and also on retentive rich lands, the produce comes nearer an ordinary average. Turnips are close, but not well swelled, except on open soils.

The land was, throughout the months of September and October, too moist to promote rapid growth ; and the temperature is now too low to produce much addition to their present weight.

## GENERAL AGRICULTURAL REPORT FOR OCTOBER.

I am of opinion that nothing can be more remote from the truth, nothing more ridiculous, than to talk of the commercial prosperity of the country at a moment when the agricultural interest labours under unparalleled depression ; the latter may be regarded as the basis of the former ; and therefore, when the one is very sickly, the other cannot enjoy genuine health. It is true, much bustle may be observed in the commercial world, and much business may be transacted also ; but since the circulating medium of the country was not merely crippled, but reduced to comparative nothingness, by Peel's Bill, the profits arising from commercial transactions have become reduced far below the fair remunerating average. The same cause has operated in the same way in the manufacturing districts, where we perceive the smaller manufacturers swept away, the business thrown into the hands of the greater capitalists, and the wages of the workman reduced to so scanty a pittance as scarcely to afford him the means of a miserable existence.

The enormous demands made upon the resources of the country by the late war produced a factitious state of things : the necessities of life rose in price beyond all precedent, beyond the utmost stretch of all anticipation : the landholders, therefore, raised their rents, and the cultivators of the soil cheerfully submitted to the increased demand, conscious of their capacity to discharge the obligation. While the progress of the late war raised the price of the productions of the ground beyond all calculation, commerce was monopolized to a very great extent, by this country, and, on the whole, a degree of seeming prosperity pervaded every ramification of trade and commerce, which has since been followed by the most disastrous consequences. Peace and prosperity ought to go hand in hand ; but no sooner was the sword returned to its scabbard than the industry of this country was energetically met by foreigners, and our commercial monopoly, which had been cemented with rivers of blood, crumbled to pieces. A decline in business became perceptible immediately ; yet things might have been let down to their natural level without incurring that terrific havoc which has marked the retrocession caused by the ruinous monetary measure above mentioned. Extensive circulating medium, and extensive credit, the one the natural consequence of the other, were indispensable in order to support the declining business of the country, which the violent outrage committed by Peel on the currency contracted most ruinously.

From this period the agricultural interest, which had been on the wane ever since the conclusion of the war, declined with fearful rapidity ; and from that factitious state of things, which raised the price of the bushel of wheat to thirty shillings, we have arrived at a period when the average price of this indispensable article of human existence scarcely reaches five shillings, or one-sixth of the maximum just mentioned ! Of what avail therefore, is it to the agriculturist to talk of the promising appearance of his crops, since no crop which it is possible for the ground to produce can yield him a subsisting remuneration.

While such is the state of things in this country

we find that the late harvest proved abundant all over Europe : the price of corn, therefore, is lower in the markets of our continental neighbours even than that which rules in this country. However, as regards the prospect of the newly-sown wheat, generally speaking, the weather has been propitious ; and though some raw harsh frosty winds occurred towards the middle of last month, the young wheats were not in a state to sustain injury from their chilling influence or operation. Corn was brought to the sickle at an earlier period than usual ; and, therefore, the seed was got into the ground accordingly, and had time to take a firm hold on those friable lands found in some parts of Oxfordshire and other places before the commencement of the equinoctial gales which frequently make such havoc under other circumstances : that is, when seed time has happened so late that the tender sprouts were not sufficiently rooted in the earth.

An early harvest can scarcely fail to produce a good seed time for wheat, because it enables the husbandman to take advantage of the weather ; but, although an early sowing time is suitable for most parts of the kingdom, for the midland and southern counties in particular, it is not found to answer so well in Lancashire. If wheat be sown unusually early in the Palatine just mentioned it gets too forward prior to the winter, and suffers very much if that season happens to be severe. It is a common observation amongst the laborious farmers of Lancashire that they do "not like two summers upon their wheat," alluding to fine weather which frequently occurs at the end of the month of October, and the beginning of November : if the wheat be well up before Christmas, they are satisfied ; the land is principally a light sandy black soil. On the stiff clays of the county of Chester, on those of Yorkshire, Leicestershire, &c., wheat can scarcely be sown too soon.

The potato crops in Lancashire (where this highly useful vegetable is cultivated more extensively, and attains a much greater perfection, than in any part of the kingdom,) failed very much in the year 1833 and 1834, owing, beyond all question, to keeping the same ground too long under the plough and the potato fork ; the present year has scarcely produced a fair average crop ; but abundantly sufficient to supply the market, as the price would scarcely average eighteen pence per bushel of 85 or 90lbs. The war price was seldom under three shillings, and occasionally reached seven. The farms in Lancashire are small ; the cultivators of the ground are a very hard-working industrious race ; and as, owing to the very numerous population of this county, and the many large towns which it contains, a ready sale is experienced for the minor productions of the garden, the farmers are enabled to meet the pecuniary demands made upon them more easily than the same class of persons in other parts of the kingdom.

The grazier and the dairyman have not suffered in the same proportion as the agriculturist, as beef and mutton, as well as cheese and butter, have not experienced so great a depression of price as every kind of grain without exception.

The heat and uncommon dryness of the weather which characterized the summer of the present year, and particularly the latter end of it, proved injurious to the turnip crops, more so than to mangle wurtzel, while the aftermath was unable to make its appearance till a period too late to render that essential utility which is generally derived from it. All that fine grazing country on the north-western side of Northamptonshire, as well as the grass lands from

this county to the banks of the Trent in Derbyshire, suffered severely from the excessive drought which occurred at the latter end of the summer.

The grazier may, perhaps, be enabled to procure the means of existence by the present price of his produce; but I must honestly confess I can discern no prospect of bettering the condition of the agriculturist, unless the expenses of government and the interest of the national debt were reduced in some degree of proportion to the descent which has been experienced in the various ramifications of busy life. Peel's Bill, while it reduced the cultivator of the soil to beggary, nearly tripled the property of the fundholder; and consequently enhanced the enormous sum bequeathed to the originator of this baneful measure by his father, precisely in the same manner! Is this consistent with reason and justice?

I well recollect observing, some years ago, the persevering efforts made to cultivate many of the moorlands of the north, even half way up the dreary hills; I well recollect their return to moorlands on the decline in the price of grain. Of the policy of the corn laws I was always inclined to doubt, and at length we have arrived at such a state that, notwithstanding the most ample legal restrictions, the price of

agricultural produce will scarcely pay for the cultivation of the land, to leave rent altogether out of the question. No legal enactment, however, of this description can reach the source of the disease, and consequently no permanent cure can be expected: indeed, temporary excitement cannot be thus produced. The *commercial prosperity of the country* is frequently rung in our ears; yet the paradox is presented to our eyes of bread being offered at a price immeasurably low, and the labouring classes of the community, the busy instruments of the *commercial prosperity*, unable to purchase sufficient to supply the cravings of nature!

The price of wheat may be regarded as a criterion of every other grain; thus, if we take the price of wheat at 5s, barley may be quoted a trifle more than 3s 6d; while oats are under 3s. Beans have, for many months, supported the best comparative prices of agricultural produce, and may be quoted at the present moment at 4s 6d or 4s 9d per bushel. Hay and straw are low in price, and experience a dull sale. In the London markets coarse meadow hay finds a sluggish sale, at from 56s to 65s per load of 36 trusses. Good average qualities from 70s to 75s.

## AGRICULTURAL INTELLIGENCE, FAIRS, &c.

**EXETER GREAT MARKET** was very largely supplied with what are now termed Fat Bullocks; the fact, however, is that the scarcity of keep renders it almost compulsory with many to drive their stock to market in an unripe state, as otherwise they will be likely to lose something of that degree of condition which the summer's feeding has enabled them to attain; but further than this also, it must be admitted that such is the present state of things as to agricultural produce, that there are those with whom stern necessity has no law. Although then so much was driven in, there was nothin like first rate beef, the best not realizing above 8s. per score, while some of the Heifers met a sale at £20, and £20 and a-crown a pair, or about 7s. per score. The supply of butcher's Calves was not large, and they bore a proportionately good price, the best of them, estimated at about 30lbs. the quarter, obtaining 55s. a-piece, or 5½d per lb.; and the quotations being from 4½d to that price per lb. There was a good show of Sheep, and as well as butchers, a few farmers in the market disposed to purchase, the consequence of which was that the sale was better than for many preceding weeks, although it cannot be said with anything like decided improvement in price. Some Exmoor Horn Sheep estimated at 13lbs. a-quarter, which are now much esteemed at the stall, obtained a guinea a piece, or 6d. per lb.; and a lot of Dartmoor Wethers, estimated at 17lbs. a quarter, and also a good article in the way of sale at the stall, 27s. a piece or 4½d per lb. Prime Wethers too, estimated at 20lbs. the quarter, realized 30s a piece, or 4½ per lb., and Ewes of about the same estimated weight, 26s 6d a piece, or 4d per lb. There were pretty many Cows and Calves, but the best not beyond a medium rate; notwithstanding this, however there was a fair stroke of business doing at from £8 to 10 guineas, or from 7s to 7s 7½d per score. There were also many poor Steers, Heifers, and Barreners, but in which trifling business was doing at from 4s. 9d. to 5s 6d. per score. Barreners getting into condition, were 6s. per score.

**PORK.—CARCASES.**—In this market the supply of English Pigs was not beyond half the extent of that of the preceding week, but many of these were particularly prime, and the morning most favourable for show-

ing them to advantage. Notwithstanding this, however, prime dairy fed meat could not obtain a better price and must again be quoted at from 6s 3d. to 6s 6d. but larger Pork was rather better worth; in fact, nothing but the very largest Pigs being below 6s.; the quotations for these being from 5s. 6d, to 6s. per score. There were only about a score Irish Pigs in the market, and these in two or three hands, the quotations for them being from 5s. to 5s. 6d. per score.

**YEovil FAIR.**—There was a considerable number of Beasts, but generally of a very inferior description; the sale was dull at from 7s to 9s per score, and great numbers were driven away unsold. The Sheep Fair was the largest known for many years, and the greater part met with purchasers at an advance of price to what has lately been obtained at the fairs recently held in this neighbourhood. Pigs were in great plenty, and at reduced prices, yet little business was done. There was a considerable number of horses, but with the exception of a few good cart colts, they were of a very rough description, and but few purchasers.

**At HAWICK WINTER FAIR**, a great number of cattle were shown, but the demand was very dull, and inferior beasts could scarcely be sold. Two year old cattle were from 30s to 40s, and stirks were from 20s to 30s below the prices of last year. Good milch cows, near the calving, were selling readily at fair prices. Prices may be quoted as follows:—Good stirks, from 4l 10s to 5l 15s, and even 6l 6s; inferior stirks, from 3l to 4l 4s; two-year-olds, 6l to 8l 5s; fat kyles, 5s to 5s 3d per stone; calving cows, 9l to 13l 10s, and inferior cows, from 4l 10s to 8l.

**AT ANDOVER SHEEP FAIR**, there was about the average number of sheep, which met a dull sale, at the following prices:—Ewes, 20s to 28s, wethers, 22s to 32s, lambs, 16s to 22s. The quantity of cheese pitched was large, but a great portion remained unsold. The average prices were—Skim, 23s to 28s, caward, 40s to 44s, Somerset, 48s to 58s per cwt.

**At JEDBURGH FAIR** there was a good show of stirks, which met with a slow demand, at prices varying from 2l 15s to 5l 5s a head. There were no fat cattle in the market.

**STAMFORD FAIR.**—This great annual fair appears to have regained all its pristine vigour and importance. The show of horses on Monday was uncommonly numerous, and a great many were sold for tolerably good prices. In the best days of Stamford fairs, before any schisms and heart-burnings had divided and severed the interests of the town, there never were more than 8,000 sheep penned for sale, and it is an important fact to lay before our readers that we can state, on the authority of one of the oldest butchers in the town, that at this fair we had very near 7,000 penned, and a very brisk sale experienced at fair prices. On Tuesday the supply of Scotch, Irish, and Hereford beasts, was almost as great in proportion as the show of sheep, and the trade was extremely animated, there being an uncommon attendance of buyers. The show of fat beasts was also better than for many years past, and good prices and a ready sale realized.

**THIRSK FORTNIGHT FAIR.**—The show of cattle was rather limited, and but little was doing in the market. A large show of sheep, of which some were sold at low rates. Beef, 5s to 5s 6d per stone. Mutton, 4½d to 5d per lb.

**WHEAT.**—Average prices of wheat sold at Wood-bridge market within the last seven years :

|                                                       | £     | s.     | d.  | per    |

| Loaf Sugar....  | 1s 2d per lb.              | 10d         |

## BONES.

Since the 12th of October there have passed the **SOUND**, or by **ELSINORE**, and the **GREAT BELT**, ships loaded with Bones, bound for Hull, 2; for Newcastle, 1; for other parts of England, 3; and for Scotland, 2.

## RETROSPECT OF THE WOOLLEN TRADE.

**LEEDS.**—At no corresponding period within the last ten years have the commercial and manufacturing operations of this district been carried on with so much activity and spirit, and under appearances so encouraging as thus far into the present year. The eventful year 1825, indeed, is the only one which can at all be brought into comparison; and certainly the first nine months afforded a spectacle which might bare away the palm; but its glories became suddenly eclipsed. The extra-commercial investments to

which recourse had been had in the ardour of excitement, when all the direct avenues to commercial enterprise, legitimate and illegitimate, had become literally crammed, began as early as September, even to show equivocal signs. Spanish and Columbian Bonds; shares in mining companies with unpronounceable names and in the endless variety of projects by means of which simple cupidity lent itself to the purposes of deeper and more cunning adventure;—all these came tumbling down, and by the end of October their share in the support of the common delusion was already withdrawn. Through the month of November the same shock was communicated to each successive link in the grand chain of speculative enterprise. On the 24th of that month came the criminative and recriminative communications between Government and the Bank of England as to who should bear the blame of the approaching storm; and then followed the crash which laid all these wild extravagances in the dust; shook our commercial frame to its very centre; and brought us, in the words of Mr. Huskisson, to “within forty-eight hours of a state of barter;” that is, so nearly to a state of existence but one degree removed from the savage state.

It cannot be improper nor unprofitable to keep these things in our minds, and apply them as a test occasionally to passing events. So far as we may detect parallel symptoms, they will be of use as a warning; and if we find none we shall proceed with the greater confidence. The state of our currency, the nature and direction of the speculative operations of the moment, the manner in which the latter may be encouraged by the former, and how far the facility enjoyed is likely to prove a temptation sufficiently great to overbalance discretion; these are the points which in such case of comparison would have to be examined. That our currency must at this time be ample, in the most liberal sense of the word, is a point which we may assume without hesitation, if we look only at the numerous establishments of Joint Stock Banks of issue which have spread themselves over the face of the country, in addition to the old established private banks, within the last two years. All these Banks want profit to divide amongst shareholders at the regular periods; without custom there can be no profit; and we all know that in a state of competition which renders solicitation for custom necessary, the soliciting party will naturally be expected to hold out some advantage as an inducement, and cannot adhere so rigidly to the principle of caution as he otherwise might do. This appears to be the unfavourable view which might suggest itself in reference to our currency. But it will be remembered that the very constitution of these banks imparts to them a character, a responsibility, a stability to which many of the old race of one pound note manufacturers were strangers; here we have at all events some chance of redress to set up against the risk of even an occasional want of discretion. On the other hand, we have the further security of such checks as government has provided for controlling the issues of paper by requiring periodical returns of their amount; and then, again, the Bank of England has learnt a lesson of wisdom from bitter experience, which she now uses, not only by a careful attention to her own issues, but also by the exertion of all her influence to prevent extravagance and irregularities in other establishments.

It may be assumed with just as little hesitation that the spirit of adventure is by no means dormant amongst us at the present moment. True, we have no joint-stock milk-companies, steam-washing companies, soap-bubble-companies, or the like; the wonder is that the nation could ever have regarded such mountebank impositions with gravity. They have had their day; and as to their directors, their managers, the charlatans for whose benefit the puppets were moved;—what has become of them, and whether they ever paid a shilling of their debts or not, the public, fortunately for them, is too heartily sick of their exploits to enquire about. But of Railway projects we have a plentiful crop: all those of 1825 have been revived, and new ones are added to them. Many of these are, no doubt visionary, and destined for an untimely end; and the facility with which shares are taken up, even for the least promising

of these speculations, indicates the existence of a disposition in the public mind such as we have alluded to. Yet it must be remembered that of all the motely projects of that same harlequin year, Railways form about the only one which has come to maturity; has proved itself feasible, profitable, useful; at any rate, therefore, we may consider that we have solid experience for our guide now; and we may feel disposed to regard any little ebullition of speculative zeal, founded upon such a basis, without much alarm.

We have been induced to enter thus far into a consideration of these signs of the time, from a conviction that they are not without their influence upon mercantile affairs generally. It is the nature of the excitement to spread. Wherever it may first break out, and however partial may be the extent of its operation for the moment, sooner or later it communicates all around, and ultimately no part of the scene of action is entirely free from its effects. There are problems in the present state of prices which we think may be solved by a reference to this community of feeling or impulse, and so far it is desirable to keep in view the facts; at the same time we have been careful not to testify a degree of alarm which we really do not entertain. Our object is to indicate, and to inculcate, caution only.

Immediately after the close of the German wool fairs, last summer, we gave a comparative view of the prices obtained, shewing how very little they had varied in three successive years; the whole extent of fluctuation which had been experienced during that period must, therefore, have been limited to the interval between one clip and the next; and it is very remarkable how regularly prices fall back within their accustomed limit as the season of the clip approaches. Since that period the attempt to unsettle prices has been again repeated; and in the face of past experience as well as of present data, that attempt as even not been without success: foreign wools are considered higher in this market by about 10 per cent. than they were last June.

The continued activity of our manufacturers, all this time, will of course suggest itself as, in some measure, accounting for this advance; although the contest between the wool seller and the manufacturer has been none of the smoothest, and the struggles of the latter to make ends meet in such a state of things have been none of the slightest. It might naturally be concluded that a demand so constant and effective must seek far into the supplies, yet we find upon examination that these supplies themselves have been very considerably augmented this season in comparison with former years.

The total quantity of foreign wool upon which duty had been paid in this year up to last Tuesday was lbs. 29,802,256  
And up to the same period last year only..... 26,552,929

The excess therefore is .....lbs. 3,240,327

Or nearly one-eighth of last year's supply. This excess it further appears, is caused entirely by the extra importations into the port of Hull, consequently of German wools, the total quantities being—

This year.....lbs. 11,429,804  
And last year..... 7,620,795

Here then we have another element to guide us in the formation of our opinion: if it shall appear that the stocks in Germany have been very much reduced by these exportations to England, and that a consequent scarcity, and rise of prices, have taken place there, we may fairly say the effect is accounted for; let us make the best of it. But first let us see how matters really stand there. The prices obtained at the summer German fairs, it will be remembered, were highly satisfactory to the growers, who had been led to apprehend that some serious reduction from the prices of the preceding year's clip would have to be submitted to. This we conceive to be the proper test as to what constitutes a remunerating price: that which satisfies the producer. We hear, occasionally, of unremunerating prices, when all that is meant is that prices do not remunerate the second or third hand speculator, who leaves the cost of production entirely out of his view.

The Autumn Wool Fairs in Germany have been held during the past month. They are, of course, secondary in importance to the summer Fairs; but still their result will furnish an index as to the state of the market there. We select the report of the Breslau Fair as the most important. The total quantity brought to market last month was,

From Silesia..... cwt. 1,935  
" the Duchy of Posen ..... 5,573  
" other parts..... 774

Total cwt. 8,282 \*

And the total quantity brought to market at the corresponding Autumn Fair of last year was less by 1,526 cwt. Here then, we perceive no indication of falling off in the supply. As to prices, we can give no quotation which would be intelligible as a means of comparison, but the report says—"the expectations of the growers are by no means fulfilled: the buyers held off and endeavoured to depress prices. For the wool from the Duchy of Posen, for instance, the prices asked could not be obtained, and thus many a second-hand dealer will find himself deceived." Our German friend writes up to the mark at once, without circumlocution: and we may spare our readers the infliction of any commentary upon the text.

The state of the English wool market is yet more anomalous. The prices of English wool for the last two years have always been out of all proportion to the prices either of foreign wool or of any other article of raw produce. For the clip of 1833 the growers obtained an enormous advance; during the excitement which prevailed through the latter half of that year a still greater advance took place; and for the clip of 1834 the growers were naturally anxious to profit by it. But the allusion had passed away; the buyers were no longer sanguine, and the consequence was that a very considerable proportion of that clip remained unsold. The same incongruity of view, between grower and buyer, has continued to prevail from that time up to the present moment. We have recently conversed with a buyer who has been amongst the long-wool growers in Lincolnshire, and with another who has just visited the short wool-growers of the north of England, as far as the boarders of Scotland. They are both intelligent practical men, entirely unconnected with each other, and their reports agree to the letter. Comparatively little has been sold; in a great many cases the whole of this year's clip is held; in some cases two year's clip; and in others even more. Attics, chambers, bed rooms; every nook and cranny are filled with wool, which they evince no disposition to sell; if they do name a price it is generally 10s per pack higher than the same wools would fetch even here on the spot. And yet prices here continue extravagantly high. The worsted trade has all along languished under their depressing influence; and the sole circumstance which has operated as a relief to the spinner has been the extraordinary prices he could obtain for that portion of his combing fleeces which is available for clothing purposes, the demand for certain descriptions of low heavy woollens having continued remarkably brisk during the whole of the last two seasons. But we have no right to calculate upon the continuance of even this partial demand. Practices have already been resorted to in the manufacture of these low heavy goods, in order to diminish the burden of price, which must ultimately tend little to maintain their reputation in the market; and we need not say that whenever confidence becomes impaired, more particularly during a state of things at all approaching excitement, the reaction is uniformly violent.

Many other considerations press upon us in reference to this subject, but for the present we have said enough. We think we have entered sufficiently into detail to justify the general view with which we begun this article, and we reserve ourselves for further examination on another occasion.

\* The total quantity brought to the great Breslau Summer Wool Fair was 51,102 cwt.

## REVIEW OF THE CORN TRADE IN MARK LANE, DURING THE MONTH OF NOVEMBER.

In taking a retrospective view of the corn trade during the past month, little opportunity has been afforded of congratulating the farmer on any improvement in his prospects, nor has much benefit been derived by the factor or speculator; the same want of animation characterising the proceedings, as has now unfortunately prevailed for many months; not that the finer qualities of wheat have suffered any depreciation in value, but, on the contrary, have evinced firmness in their currencies, but the bulk of the supplies consisting of secondary and inferior qualities, many samples have been forced off at ruinously low rates. The prevalent opinion however regarding the wheat crop appears to be, that though inferior in produce to the yield of 1833 and 1824, particularly so in the Southern and South Eastern parts of the Kingdom; yet taken as an aggregate, it will be equivalent to a fair average: the surplus of old wheat on hand, at the period of the new being brought into the consumption being equal to the amount for two or three months. In reference to the unusually large consumption of wheat, both in a manufactured state, as well as being mixed with feed for sheep and cattle, used likewise by maltsters and distillers, added to the failure in potatoes, a most important article to be included in any speculation, founded on the consumption of wheat, looking also at the full employment of the manufacturing classes of our population, it may be assured with much probability, that the supplies will be barely commensurate to the demand until another harvest; in anticipation of which, prices are likely to improve during the ensuing spring and summer: and even after Christmas the trade may exhibit an improved aspect; and at all events however, it will attain a greater degree of steadiness than can be expected during the present customarily dull period of the season. It is also to be recollected, that wheat is now realising rates, which farmers a few years past never imagined to have witnessed under the protective system of the corn laws, and if the estimation is well founded, that the crop is not more than an average, it would naturally follow, that purchases made at the prevailing low currencies, will ultimately yield a profitable return. BARLEY has generally proved a plentiful crop. OATS have yielded a large produce per acre, and more ground cultivated with the article than is usual in this country. BEANS are more productive than last year, but not to the extent at first expected. PEAS have given an ample return. More RAPESEED than usual has been sown,

and the whole secured in excellent condition, and the quality fine. The crop has been nearly all brought into the consumption, and we are, as in former seasons, becoming dependent on foreign imports. Both white and brown MUSTARDSEED has yielded well, and quality fine. TREFOIL a fair crop, and much of last year's growth still on hand. CLOVERSEED—white seed has been a very short crop, and the quality not fine; the first cutting of red, owing to the protracted dryness of the season, was small, but the quality superior; the weather, however, proving very unfavourable during the whole period of the second cutting, a large proportion of the seed was lost; the quality is inferior, and not even half an average saved. The cultivation of TRIFOLIUM INCARNATUM has been much increased; it has yielded a satisfactory produce, and a large breadth has again been sown. TURNIPS have throughout a large range of the country turned out an extensive failure. POTATOES are likewise very deficient in produce, calculated by some dealers at two-thirds of the usual growth. In Scotland both these valuable roots are good crops, and in Ireland potatoes are generally favourably reported, but for the consumption of the metropolis, large supplies, in addition to the production of our own neighbourhood, will be required throughout the year. The first cutting of HAY was abundant, and well secured, but the second growth, in consequence of the long continuance of the drought, has been extremely short, though there is now good feed on all the pastures.

The crops in Scotland and Ireland have no doubt been deteriorated by the weather, but the yield having been a full average, quantity has been produced and remains on hand, though the quality is inferior, which will have the effect rather of depressing than enhancing the prices.

The supplies of wheat throughout the month have been very moderate, and upwards of 13,000 qrs less than during October. This falling off in the receipts may be attributed to the farmers having been busily engaged in out-doors operations, the weather having been very favourable for sowing, and the flail being employed in thrashing out seed corn, instead of contributing to the market; notwithstanding the limited amount of the arrivals, the trade has manifested little animation, the damp foggy weather having affected the condition of the bulk of the samples; fine dry wheat has been alone in request, and even this demand has been principally confined to white quali-

ties, which for superior descriptions have realized an improvement of 1s to 2s per qr; prime red sorts in the early part of the month also obtained 1s per qr more money, but towards the close receded to the same amount, while secondary and inferior samples have experienced a continually dull and heavy sale, and are 1s to 2s per qr cheaper than at the termination of October. The principal shipments of bonded wheat have been to Halifax, Hobart Town, Madeira, Amsterdam, and Norway. The offers have been at low rates, from 18s to 22s, and several purchases have been effected on these terms; good Danzig wheat is held at 28s.

Though no ostensible alteration has taken place in the top price of town-made flour, yet the trade has been languid, and 36s the highest rates realized, except under particular circumstances, and ship qualities have become 6d to 1s per sack more depressed. Bonded flour has met purchasers for shipment to the West Indies, Mauritius, and South America, the deficiency of the wheat crop in the United States, and advance in the currency of flour having induced holders to speculate in the export of the article; sour qualities have obtained 17s to 19s.

The alterations which have taken place in the averages consist of an advance of 1s per qr on wheat, the aggregate average of the kingdom having declined to 36s and a fraction, and the duty increased to 50s 8d; the duties on oats, rye, and peas are 1s 6d per qr higher, and on beans 1s 6d per qr lower.

Though the receipts of barley have exceeded those of the previous month by nearly 7,000 qrs, yet, considering the abundant crop of the article, the supplies have been much more limited than could have been anticipated, more especially as the article is bearing a higher relative value than wheat; and, in reference again to the produce it will be found, that, taking the last five years, the arrivals of barley this season have been, comparatively, very moderate, calculating the periods from the 1st of Sept. to the close of Nov. in each year—

|         | English. | Scotch. | Irish. | Total. |
|---------|----------|---------|--------|--------|
|         | Qrs.     | Qrs.    | Qrs.   | Qrs.   |
| 1831 .. | 80,304   | 12,309  | 1,845  | 94,458 |
| 1832 .. | 60,374   | 3,171   | 45     | 63,590 |
| 1833 .. | 65,498   | 2,384   | 416    | 68,298 |
| 1834 .. | 50,869   | 14,574  | 8,558  | 74,001 |
| 1835 .. | 62,580   | 2,485   | 2,686  | 67,751 |

The arrivals of barley, though they have exceeded those of the preceding month, yet considering the plentiful crop and period of the year, have been less than might have been expected, particularly from Norfolk, the bulk of the supply having been received from Essex, Kent and Suffolk. The finer qualities of Chevalier forming a small proportion of the receipts, and having been sought after by the ale brewers, have obtained an advance of 2s to 3s per qr., and fine selected common malting was bought at 1s per qr more money; good secondary descriptions, which are found with the better sorts to malt this season, tender and kindly, maintained until towards the close of the month, their former rates,

but supplies increasing, with an impression on the part of the maltsters, that they would soon be materially augmented, checked the demand, added to a good stock of malt being on hand, and prices consequently receded 1s per qr, and on inferior descriptions, and distilling qualities, 1s to 2s, distillers purchasing but sparingly; grinding parcels were also 1s per qr, lower. A few parcels of *curiously* fine Chevalier barley have been sold at prices 2s to 4s above the general quotations; one lot weighing 58 lbs brought 38s, and another of the unusual weight of 60 lbs, 40s per qr; this latter sample was most remarkably fine, and colour unexceptionable, and warranted to weigh the amount specified; it was Norfolk barley, brought to this weight by being frequently passed through the machine, and could not therefore be termed a natural growth. Irish barley has been selling on very low terms, say 9s to 11s per barrel free on board, but the weight light, and on arrival has been obtaining very little money, good grinding of 27 to 28 stone to the quarter, is only now noted as worth 20s to 21s; fine 30 stone, 21s to 23s; demand has existed for the article in Bond for export, nearly 4000 qrs having been exported to Portugal, and upwards of 1200 qrs to Norway, the prices realized have been about 13s to 15s per qr.

New malt has continued saleable, having proved heavy, tender and bright; fine old malt has also obtained the former rates, but at the latter part of the month, the trade was more languid and prices, except of the finest parcels, were barely maintained.

The importations of oats from England have been moderate, and from Scotland very limited, but the falling off from the Northern parts of the kingdom, has been nearly equalized by the arrivals from Ireland, though the supplies generally have been less than buyers anticipated. The new Scotch oats have come to hand very inferior to the usual growth of the country, and are much out of condition, being muggy and heated, and sold at very depressed rates; Angus as low as 18s to 19s, extra 21s. Many of the latter parcels of Irish have been light, and were bought at very low figures; English qualities have been purchased at an improvement of 6d to 1s per qr; indeed dry fresh new oats generally have been taken off by the consumers at the relative prices, in preference to good old corn, and consequently it has been very difficult to work off any quantity of old oats at the late high quotations, which have in consequence receded. The trade has been by no means animated, and though the samples have been cleared off during the successive weeks, it has been in many instances with a slight abatement in price; white Irish oats have receded 6d to 1s per qr, but black must be quoted higher to the same amount. The free on board sales in Ireland have given way 3d to 6d per barrel; and it is to be regretted, that the sanguine temperament of the trade in the sister Isle, is keeping up the price of oats relatively above our market rates, and looking forward to improved quotations; while the general feeling of the trade in Mark Lane is, that the present currencies will not be maintained. Several shipments of bonded oats have been made to the West Indies, besides 2000 qrs to Boston U. S.; 600 qrs to the Mauritius, and nearly 800 qrs to Jersey; prices of Riga and Aarchangel qualities being 7s to 10s; Danish, Holstein, and Swedish, 9s to 12s; Brew, 13s to 14s.

The stock of old beans being nearly exhausted, prices gradually advanced, and were 2s to 3s per qr dearer, but in the middle of the month, the supply rather increasing, prices did not further improve; the quotations of new were also enhanced to the same

amount; but larger arrivals in consequence being received, the article receded 1s to 2s per qr.

White peas have found ready sale in order to complete the government contract, of 1,000 qrs; and prices have advanced 2s per qr, and the market until the close of the month became bare of samples, but supplies arriving from Essex and Kent, caused the trade to become dull; maple and grey peas have also improved in value, but the sale not brisk.

Rapeseed as well as linseed, have had their quotations materially affected by the failure in the whale fishery of Davis's Straits. The former article advanced 3l to 4l per last, and the latter 6s per qr; a few foreign supplies however, having arrived of rapeseed, prices have given way 2l to 3l, and linseed maintaining its improved rates.

During the month of November, the following quantity of grain and flour has arrived in the port of London:—

|               | Wheat.<br>qrs. | Barley.<br>qrs. | Malt.<br>qrs. | Oats.<br>qrs. |

| Foreign ...   | 350            | 1,242         | 1,8514           | brls. 4,355      |

The grain markets throughout France, exhibit a steadiness of character as regards price, and fine wheats are realising fully the previous currencies. Opinion also appears in favour of an enhancement in the price, as seed has not been generally favourably sown, and little wheat has appeared above ground compared with previous years at similar periods; the quantity of fine quality also bears a very small proportion to the bulk, and will therefore maintain a higher relative value, preventing flour of best quality from declining in value; and though some months must elapse before another harvest, yet the prices being so low, are more susceptible of any casualty to cause them rapidly to advance; farmers therefore seem inclined to hold part of their stocks, until they can form some better idea as to the result of the harvest of 1836. Markets also will in all probability be less plentifully supplied than was expected, and which will contribute to keep up the currencies. On the coast of Brittany and adjacent ports much business was passing in wheat, for shipment to the southern French ports; and at Marseille the imports are being anxiously expected, the stock of free qualities on hand not exceeding 8,000 qrs, and lower Loire samples were selling on delivery at 45s 8d. At Paris, cloverseed was heavy sale, and prices nominal at 46s to 48s the cwt; at Rouen it was dull at 45s to 48s; at Bordeaux old seed was selling at 32s to 36s, and new quality had obtained 46s, with an active demand, and a cargo of 100 bales was being shipped for Ireland.

The Italian markets remain firm for wheat. At Genoa the supplies being short, higher rates were obtained for hard wheat. At Leghorn white Tuscan wheat was held at 42s 4d; red ditto at 36s 8d;

Odessa, 25s 5d to 29s 8d. At Trieste wheat was firm, Italian qualities obtaining 26s to 28s 11d; an export demand had been experienced for Indian corn at 15s 6d to 20s 9d. Rapeseed had been in request for the North; prices of Odessa seed were noted at £20 per last.

In Canada the weather had become cold and some oats still green. At Montreal new wheat from Upper Canada had been sold at 4s 11d per 60lbs; the quality of the new growth is various, and requires care in its selection, in order to store for shipment. Old wheat was worth 5s 1d per 60lbs, and new 4s 11d. Archangel wheat was realizing 4s 3d and a cargo of foreign wheat had arrived from Hull, the value of which is not stated.

In the United States of America prices of flour are exhibiting a tendency further to improve. At New York, western canal flour was obtaining 27s 7d to 28s 5d per barrel. Genesee wheat 48s per qr. At Philadelphia, wheat was worth 46s 6d to 47s 4d per qr. and cloverseed 22s 6d per bushel.

At Odessa the arrivals from the interior having been latterly limited, and the exports considerable, the stocks were much diminished and prices firm: hard wheat was quoted at 21s to 23s 7d; soft ditto 19s 8d to 21s 8d per qr.

At St. Petersburg the frost having set in earlier than usual had impeded the navigation, and as in all probability the shipping season had closed, the trade was languid in seed, for fine Morschansky and similar qualities, however 45s 10d was demanded, though the offers generally did not exceed 44s 6d; middling sorts have been bought at 42s 3d and the more inferior parcels are offering freely at 34s 11d to 38s 10d per qr. Rye remains steady, and in other articles of grain there is no marked alteration. At Riga crushing linseed was noted at 37s 3d to 39s 10d, and fine, 41s 2d. Wheat nominal; best Courish, 27s 9d. At Danzig the trade was in a very inanimate state, and prices, unless a sudden change should take place, were expected further to recede, so that best wheats might perhaps be obtained at 24s; it is justly remarked in the Danzig advices, that many contingencies may cause a depression in the value of grain below the remunerating price, which may be termed in some measure its intrinsic value, but that it is impossible this can long remain, and an investment in fine grain at such low figures is nearly certain of turning out profitably in the end. In Mecklenburg wheat was noted at 21s to 22s, and at Rostock some purchases had been made at 21s, for export to Norway and Denmark. Barley was quoted at 15s; Linseed, 47s. In Holstein, wheat has been purchased for shipment both at Kiel and Lubeck to Russia, at 22s to 23s. Barley obtaining 15s, and rapeseed scarce, at 33l 10s to 34l. Linseed, at Lubeck, 45s to 46s. At Hamburg, the wheat trade was dull, and prices declining, particularly the Lower Elbe qualities. The sale of rye, barley, and oats, was confined entirely to the local consumption. Red Cloverseed was in less request, but prices steady; fine Bohemian had been sold at 51s 6d per cwt, other good qualities at 50s. White seed, owing to the short supplies and stock, was evincing a tendency to advance. At the ports on the Elbe as well as the lower parts of the Baltic, rapeseed has advanced from 2l to 4l per last in consequence of the unfavourable news from the whale fishery, and the top quotations at Hamburg have been as high as 36l 10s, but at the close of the month these prices were not supported. In Holland, prices of Wheat continued to improve, owing to the restrictive laws, and rape and linseed had risen in value, from the causes above stated.

## CURRENCY PER IMPERIAL MEASURE.

## FOREIGN.

The public sales of Colonial and other Wools, the progress of which we referred to in our last communication, having concluded, the sales continuing up to Saturday evening last, we give the following as the correct averages obtained for Australian and Tasmanian Wools:—The finest fleeces of Australian offered went off at from 2s 7d to 3s per lb, and the low and inferior Wools from 1s to 1s 6d per lb, middling qualities being quoted at from 1s 8d to 2s 5d per lb. The Van Diemen's Land Wool, for the best qualities offered during the sales, ranged between 2s and 2s 7d per lb, middling, between 1s 6d and 2s, and low Wools, from 11d to 1s 5d per lb. The sales of Messrs. Marsh and Co., on Friday, and Messrs. Simes and Co. on Saturday, were nearly as fully attended as the previous sales. There were a greater number than usual of spinners, clothiers, and dealers in Foreign Wool present, who purchased with great activity from the lowest qualities up to those of 2s 6d per lb. Since the conclusion of the sales, an active demand has existed, but the supply is not equal to the demand, and this has checked business. The importations of Wool, this week, have amounted to very nearly 900 bales, namely from Germany, 530 bales, from Russia, 200 bales, and from Spain and Turkey about 150 bales.—*Mark Lane Express*, Nov. 23.

# THE POLITICAL COMPANION

TO

## THE FARMER'S MAGAZINE.

[Our object in appending a Political Companion to the Farmer's Magazine, was to put our readers in possession of the opinions of the most talented journalists of the day, on *both* sides of any important question which might come under discussion. We trust, therefore, that in giving insertion to articles, which seem opposed to the agricultural interest, we shall not be considered as acquiescing in the doctrines therein advanced, our sole purpose being to enable our readers to estimate the truth or detect the fallacies of the arguments advanced.—ED. FARMER'S MAGAZINE.]

### AGRICULTURAL DISTRESS.

(From the Times.)

Agricultural associations and meetings in support of them, furnish topics to which we have a more lively pleasure in drawing public attention than to party dinners and their usual appendages—to wit, the crimination of political adversaries, the widening of breaches and perpetuating of hostilities between those who might better serve their country by a hearty co-operation in the general management of her affairs. Three great agricultural meetings have taken place within these few days:—one at Aylesbury, where the Marquis of Chandos presided—one at York, under the name of the Yorkshire Central Agricultural Association, of which the chairman was Mr. Cayley, M. P. for the North Riding, the proceedings of which we reported yesterday—and a third, at Shrewsbury, Lord Darlington in the chair, with an account of which we this day present our readers.

Lord Chandos is, we make do doubt, a conscientious and well-meaning nobleman. But one amongst our reasons for rejoicing at the progressive increase of these agricultural societies is the frequency of discussion, amongst agriculturists themselves, which must result from such institutions, and the consequent opportunity which will thereby be afforded for correcting the errors of respectable men, whence the noble Marquis himself, perhaps, may not be the last to profit. Lord Chandos, to do him justice, does not propose any fresh quackery with the circulating medium, as if the currency question were at all involved with that of what his Lordship terms the “distresses of the farmer.” But the noble lord we conceive to be as far astray on the other side, when he starts as an important question “for the House of Commons,” how *that* assembly shall proceed to legislate with a view to obtain relief for the farmer. For our own parts, our opinion has always been that no substantial relief can be administered to the farmer from within the walls of Parliament, and on that point we would recommend the noble Marquis to turn back to a speech delivered not many weeks ago by Lord Stanley—a person whose interest in the real prosperity of the farmer is not inferior, we suspect, to that of many noblemen in Great Britain, and who, like a man of sense and honour, declared that he could not encourage the agriculturists to depend on legislation for any sensible relief from their embarrassments.

Lord Chandos reverts to his own motion of last year, for the repeal of the malt-tax, as a measure which would have effectually served the farmer. It hardly appeared to us at the time that the noble Lord had considered the subject in all its bearings, or indeed in any of them, political, financial, or in relation to the agriculturist, whether landlord or tenant.

In the first place, the introduction of such a question at that moment could not fail to perplex and weaken the Government which the noble Marquis professed to support; second, the State must have been insolvent had the malt-tax, producing 5,000,000*l* per annum, not been replaced by any other impost; and finally, *non constat* either that the landlord would have derived any benefit from the substitution of a tax on property for one on malt, or that the tenant would have been suffered by the same landlord to share with him one single sixpence of the profit accruing from whatever modification of taxes. Mr. E. S. Cayley, in his opening speech at York, announced that it had now become necessary for all agriculturists to “be unanimous,” admitting that hitherto they had entertained much diversity of opinion. We trust, therefore, that the first point on which they prove themselves unanimous will be in getting rid of the numberless heresies which have hitherto prevailed amongst the agricultural body, (we allude more especially to proprietors of the soil than to occupiers,) touching the causes, or cause rather, wherein the distress of the farmers has originated, as well as of the absurd and empty nostrums which are hourly proposed by way of remedy.

The state of the currency has no more to do with the embarrassments of the agricultural interest than the course of Halley's comet. The wildest of the currency doctors do not pretend that we should return to an *inconvertible* paper currency. Then what, in the name of wonder, would they desire? Will they assert that every man ought to have a facility of raising money, whether he has property wherewith to repay his loans or not? A pretty state the creditors would soon be reduced to in that case! Well, then, if that extravagance be given up, what further? Do the papermongers affect to say that, taking paper and gold together, there is too contracted a currency in this country? Why, so far from it, that money never was so cheap, the current interest on mortgages being not so much as 4 per cent., whereas during the blessed papyrocracy the market price of money exceeded the legal rate of in-

terest—namely, 5 per cent., and country gentlemen were forced to cheat the law, raising loans by way of annuity at 7 or 8. Is there, then, a difficulty in procuring specie? If so, most other countries are worse off in that respect than England, inasmuch as the English sovereign bears a premium almost everywhere on the continent, and we believe in the United States. But the fallacy of all this talk about currency is obvious to any disinterested person of common understanding. It was not because paper was plenty during war time that the agriculturists flourished—it was because the *universal demand for corn* to support the extended and wasteful operations of a war which was only conterminous with the habitable world, progressively raised the price of the article so required, the supply very generally falling short of the demand, and therefore threw continually increasing prices into the producer's pocket.

The absence of a corn law during the war, and the encouragement thus held out to importation, were never then felt by the British farmer or landlord, because, with all the aid of corn from foreign countries and from Ireland, the wants of the market were scarcely ever adequately answered. But things are changed. Prices have fallen, as the relative demand for agricultural produce has fallen below that level at which the growth of England and Ireland united are found adequate to an abundant supply. Thus the converse of the condition which we were placed in during the war has now succeeded. As the largest importations which could in the former case be executed in nowise operated to reduce prices, or to make the agriculturist clamour for a corn law, so at present, from the unexampled reduction of prices, which the corn law was enacted to prevent, it has ceased to operate as any protection whatever, and is reduced, in fact, to a mere *caput mortuum*, amounting to a palpable and almost ludicrous demonstration of the solemn folly of those other sages—the prohibition doctors—who ascribed to a corn-law, as its infallible consequence, the stability of "remunerating prices," and insisted that low prices and repeal of the corn-law were convertible terms. If the British agriculturists insist on a certain recipe for the rise of prices here, and the consequent prosperity of the farmer and his landlord, let them indulge O'Connell in the fancy for a repeal of the Union, for which he and his junior partners in Downing-street are at work with such laudable vigour, and then, when Ireland shall have fairly broken from her moorings, we see no motive under heaven for treating her more favourable than we treat other foreign countries, or for hesitating to impose upon her cattle, corn, butter, and every description of raw produce, a protecting duty in favour of our own land, its owners, and its occupants.

However, to come at once to the *rationale* of this subject, Mr. Bather, at Shrewsbury, has hit the nail upon the head. It quite rejoices us to see a strong and clear mind dealing so unceremoniously with all descriptions of humbug. The landlords, according to this straightforward speaker, must have done with obliquity and mystification. They must no longer go about the bush—they must *lower their rents*. We have harped upon the same string in this journal ever since the nostrum of legislating upon a matter which was susceptible of no substantial adjustment but from the spontaneous dealings of man with man was first propounded—that is, ever since the landlords chose to put a false colour on a plain case, and to twist, and shirk, and equivocate, and attempt to relieve their tenants at everybody's expense but their own.

There is, we repeat, but one cure, and that must

be administered by the landlords, not by Parliament. Reduce your rents, gentlemen, and you will thus effectually relieve your tenants. We do not like to see men fussing and sputtering, and throwing the country into hot water, when a single exercise of their own volition, and a slight practical rebuke of their own selfishness might subdue the artificial storm, and clear the stirred-up puddle, and at all events prove that they themselves were disinterested and sincere.

#### AGRICULTURAL DISTRESS.

(From the Standard.)

A meeting of agriculturists, composed of deputations from several counties, assembled on the 13th November, at the George-inn, in Aylesbury—the Marquis of Chandos presided. The purpose of the meeting was to consider of the course to be pursued in order to obtain from parliament, in the next session, that relief of which the deeply depressed agriculture of the country stands so much in need. The noble president addressed the meeting in a very able speech, in the course of which he pointed out the hopelessness of any attempt to obtain the repeal of the Malt Tax—adverted to Sir Robert Peel's design of removing many local burthens—also to the plan of the same right hon. baronet for a new arrangement of the land tax by which several millions would be gained to the country, to the benefit of which the agriculturist would have the first and the fairest claim—demonstrated the importance of the agriculturists acting with combination and perfect union—and finally, recommended an application to parliament for a committee to inquire into the state of the agricultural classes, unconnected with any other subject, as the course best calculated to obviate jealousy or resistance from other quarters, and to insure complete and cordial union amongst the agriculturists themselves. Several gentlemen appeared to be anxious to connect the agricultural question with the question of the currency; and it is very plain that against this imprudent and somewhat anomalous association of distinct questions, it was that Lord Chandos sought to guard. The caution of the noble marquis in this particular, is proof alike of his good sense, and of his zeal for the interest of the farmer. The bill of 1819 was passed unanimously in the House of Commons; its *active* ill consequences have long since ceased as respects all classes of society, except the agricultural class. The public mind is not yet prepared to understand what we may call the inert mischief of the principle that binds down the industry and enterprise of all mankind to a fixed scale, commanded by the quantity of gold and silver available to a few nations. At present a repeal of the bill of 1819 would be positively injurious, for a time, to the non-agricultural proprietary classes, though all would gain by it in the end. The Reform Bill has given to these non-agricultural proprietary classes the command of the legislature; it is, therefore, a matter not to be doubted of that any attempt to repeal or to tamper with the bill of 1819, would be almost as unanimously resisted in the House of Commons, as the bill itself was carried. We regret this, and probably so does Lord Chandos; but we must all act upon truths which we regret when they stand plainly before our eyes; and, therefore, in justice to the noble marquis, we must acknowledge the wisdom of his advice to the agriculturists, which amounts shortly to this—not to ensure the failure of their prayer for relief, by linking to it an impossible condition—not to place the agricultural interest in direct collision with all the other pro-

proprietary classes in the country, more particularly with those classes to which the Reform Bill has assigned the absolute control of the legislature.

In order to explain to our agricultural friends some of the difficulties of the case, we will lay before them our view of the twofold operation of the bill of 1819—the first temporary—the second permanent. The temporary effect of the change in the currency was an aggravation of the weight of all debts, including every kind of pecuniary engagement. This for a time affects injuriously all classes without exception, save the small-money-lending class, to whom it is an advantage. For a very short time it affected all equally. The only debts or pecuniary engagements, however, of long continuance, are those which relate to landed property, incumbrances, leases, and the like. Others can scarcely extend beyond a single life; the majority of them not beyond a year or two. In the sixteen years, therefore, that have passed since the passing of the bill of 1819, deaths, insolvencies, and payments, have extinguished all the occasions of discontent which the bill in question presented to the non-agricultural classes. But not only have these classes ceased to feel any inconvenience from the effect of that bill—they derive what is in all cases an apparent, and in some an actual advantage, from the low prices of the necessities of life which have followed it, and from the restraint which it fatally imposes upon credit and speculation. Every man not connected with agriculture, down to the very poorest, thinks that he is benefitted by the low price of provisions. He thinks erroneously; but it is useless to reason with him. He can buy a four-pound loaf for eightpence, while a four-pound loaf cost his father a shilling. If you tell him that his father could earn twelve pounds of bread notwithstanding, while he can earn but six, like all vulgar reasoners he will believe in the apparent good he has, and pay no regard to that which is merely promised. The poor dread nothing so much as high prices, though by high prices the poor are ever the greatest gainers. Ascending from the poor to the proprietary classes, engaged in trade and commerce, we find that they have a direct and substantial interest in the limitation of the currency. Such a limitation protects the monopoly of the proprietary classes, against the intrusion of speculative and enterprising industry. This is, certainly, no good effect of such a limitation, for the best constitution of society is that which, while it protects property from lawless violence and fraudulent abstraction, affords the most ample opportunity and even temptation to dissipate wealth in any courses not vicious.

Here, then, ends the temporary operation of the bill of 1819; it ends in enlisting in its favour many of the poorer classes, though against their best interests, and all the non-agricultural proprietary classes, upon more rational grounds. The permanent operation of a limited currency is rather inert than active—it has been already hinted at; it is the restraint which it imposes upon enterprise and speculation. The most disinterested philosophers and statesmen have scarcely learned, as yet, to appreciate the enormous magnitude of this evil. Can we expect that it will be acknowledged in a House of Commons, returned by a constituency of 101 householders, all interested in the continuance of that evil? But this, after all, is the question for the agriculturists at present. Will any House of Commons to be elected upon a law, which promises to be permanent, ever rescind or tamper with the bill of 1819? We say, never; and every passing year will render such a determination, if we may so speak, less

possible; because every passing year will give to the classes who send the majority to parliament, new reasons for adhering to a limited currency. The best service, indeed, that can be rendered to the agricultural interest is to fasten upon their minds the conviction that they have no hope from an enlargement of the currency, because such an enlargement is a moral impossibility. At present they are the only class of any political importance who think that they suffer by the restrictive operation of the bill of 1819. All other classes, we repeat it, think, though erroneously, that they are gainers. These other classes, as the agriculturists know to their sorrow, have a preponderance in the legislature; and it is vain to hope that these other classes will, upon any considerations of justice or patriotism, forego the advantage of which they deem themselves in possession.

The course, then, to be pursued by the agriculturists is a plain one; it is to look elsewhere for compensation to them, for those evils which they alone now suffer from a change that has been confessedly beneficial to the parties to whom they make their appeal; and that which is properly the first step in such a course, is that pointed out by the Marquis of Chandos. We have no doubt that if the agriculturists apply for a committee to consider of the distressed state of agriculture, unconnected with any other subject, they would obtain it; and it is our firm belief that the appointment of such a committee will lead to some measure of substantial and adequate relief—not impossibly to a repeal of the malt tax, accompanied by Sir R. Peel's proposed new arrangement of the land tax, or to some equivalent measure. At all events, the Marquis of Chandos has nobly discharged his duty to the farmer; more usefully certainly, and more devotedly, when he draws them from a devious pursuit into the right path, than when last year, under the influence of a chivalrous sense of honour, he abandoned his seat in the Cabinet, and stood in opposition to his political friends, to lead an enterprise, which, as all knew at the time, must be unsuccessful.

#### ASSOCIATIONS FOR THE PROTECTION OF AGRICULTURE.

(From the Kelso Mail)

It would be an idle waste of our time and space to enter into a minute detail of the purposes for which such Associations have been formed, throughout almost every district of the empire, or to defend them from the attacks which have been made upon them by political partizans and the disciples of the "Free Trade" school. The fact, originating out of whatever combination of causes, that the agricultural interest has been for many years suffering under great depression, while both the manufacturing and the commercial have enjoyed comparative prosperity, was sufficient to arouse the attention of the agriculturists to their own condition, and prompt the inquiry, how it happened that a period of general prosperity to the other classes of the community should prove to them one of unexampled difficulty and adversity. In investigating the causes of this apparent anomaly it was impossible not to perceive, that by the union and combination subsisting among the commercialists and manufacturers, they had been enabled to act with promptitude and effect upon the Government of the country, and to procure the enactment of measures calculated to promote and insure the advancement of their own individual interests. Conceiving also, that the tendency of some of the

measures actually adopted, and of many of the doctrines openly professed, was opposed to the general welfare of the country, as well as directly hostile to their interests, as a class, the agriculturists felt the necessity imposed upon them of adopting the example set them by others, and of combining in their own defence. This necessity they felt to be the more imperative, because it was, if not the avowed, at least the apparent principle upon which the existing Government proceeded to be guided in their adoption of measures, by the amount of excitement and agitation by which such measures were pressed upon them, rather than by a consideration of their intrinsic merits. With a view to their own security and protection, therefore, they determined to form themselves into local associations, and to give efficiency to the measures and exertions of their friends in Parliament, by their own *out-of-door* efforts. But while they thus combined for the declared object of ensuring to themselves that amount of consideration in the legislature, to which they thought themselves equitably entitled, they expressly disavowed any intention of advancing their own interests at the expense of others. They avow themselves to be desirous of "promoting the introduction and enactment of such measures as may be deemed beneficial to the Agricultural Interest," but this avowal is accompanied by the important qualification—*so far as may be consistent with the prosperity of the other branches of industry*. To the purely defensive principle upon which such Societies are founded, it is, we conceive, impossible to urge any reasonable objection, and the question comes to be, by what means can the limited purposes for which they have been formed be most effectually promoted. One great impediment in the way of accomplishing the object for which such Societies were instituted, has hitherto been the want of some acknowledged head. Diffused as these Societies are over the whole extent of the country, and each of them acting independently, and without concert with the rest, their individual exertions have been deprived of that force which they would have possessed by having their united efforts simultaneously directed to one common end. To remedy this imperfection, it has been proposed to establish a Head Society in London under the name of "The Royal Agricultural Society," which shall form a centre of communication for the Societies established throughout the United Kingdom. Such a central Society is so obviously necessary to the furtherance of the objects of local associations, that the only subject of wonder is, that its establishment should not have already taken place. From a report of the proceedings at a meeting of the "East Suffolk Society for the protection of Agriculture," held on Tuesday the 3rd instant, it appears that the propriety of co-operating with a Central Society was discussed, and that resolutions approved cordially of the proposed plan were unanimously adopted. But the "East Suffolk Society," at whose meeting a deputation from the Provincial Committee of the Central Society were present, and explained at length the purposes for which it was to be instituted, proceeded still farther and immediately appointed several of their members to co-operate with the Central Society. This example we have no doubt will be imitated by the other local associations throughout the country, and if so "it cannot," in the words of the *Mark Lane Express* "be for an instant doubted, that a body thus organised, having no political object in view, and acting on the principle of protecting its own interests, so far as may be consistent with the prosperity of the other branches of industry, may be productive of eminent national advantage."

## THE IRISH POOR.

(From the Sun.)

The lamentable condition of the poor of Ireland, of which we are every day receiving the most heart-rending accounts, is calculated to fill every feeling mind with doubts of the presence of an overruling, all-beneficent Providence in that unhappy land. To ponder upon the scenes of wretchedness with which even the industrious poor are familiar—to contemplate the appalling spectacle of helpless infants and decrepid old creatures perishing with hunger—to dwell upon the anguish of a parent driven by the sight of his famishing children to trample upon the sacred laws of God and man by violating the property of his neighbours, and perhaps entailing upon himself an afterlife of shame, suffering, and remorse, is enough to fill the mind with dark uncertainties, only reconcilable by the conviction that Heaven will, in its own good time, adjust the balance between the oppressor and the oppressed.

But in the meanwhile we must not shut our eyes to such a state of things. England assumes the right of governing Ireland, and is, therefore, responsible to a certain extent for evils which could not exist, did she not tolerate them. The Irish people stretch forth their hands, and cry to us for help. We must—it is our duty to endeavour to relieve them. During the long time the Tories swayed the destinies of the people of this country the great bulk of the English population knew less about the condition of Ireland than they did about the situation of the slaves in our plantations. The Court party neither sought nor desired to ameliorate the condition of any portion of the Irish people, with the exception of the Orange faction, into whose hands the nation was virtually delivered up, as a reward for supporting by its Parliamentary influence the grossest abuses in church and state. A reform in Parliament has, amongst other things, made England acquainted with the actual condition of Ireland, as well as served to point out the only means by which the sufferings of the inhabitants can be ameliorated. We can no longer deceive ourselves with a hope that we have acted up to our convictions, unless we actually compel the Irish landlords to contribute towards the support of their tenantry, by the establishment of a wholesome system of poor laws. In fact, without poor laws nothing can be done which shall permanently relieve the Irish people. Railways, and canals, and the drainage of bogs, and the cultivation of waste lands, would do much to improve that country; but our conviction is, that neither railways will be laid down, nor canals dug, nor bogs drained, nor waste lands cleared, till the absentee landlords find themselves burdened with the maintenance of an able-bodied, useless tenantry.

We are glad to find that Mr. O'Connell is now convinced of the necessity of making a legal provision for the poor of Ireland; and that henceforth we may calculate upon his co-operation in support of such a measure. Nothing, however, can be more preposterous than his references to the evils caused by the abuse of such a system in England. Mr. O'Connell ought to know that there is not the slightest comparison between the relative condition of England and Ireland. In this country there are no wastes to reclaim—no outlets for the establishment of any process of remunerating industry. Ireland is to this country what the prairies of the far west are to the best cultivated farms in the neighbourhood of New York. Until the vast internal resources of England were brought into full play her poor laws were among her national blessings, because they gave the most powerful impulse to her industry;

but when manufactures were established, and trade carried on, and the means of constant employment procured for the whole of her people, then they were found to be fraught with evil, because they hold out inducements to idleness, of which the more vicious were ever ready to take advantage. Before Ireland has any reason to apprehend the evils which England has suffered from the establishment of poor laws, her people must have advanced to the same stage in the cultivation of the liberal arts; the progress of manufacturing industry; the exploring of mines; and, we would add, without offence, the knowledge and the practice of social and self-government. When Ireland begins to rival England in these things, then she shall be justified in talking of amending or abolishing the laws for the maintenance of a system of able-bodied voluntary pauperism—but not before.

### THE AGRICULTURAL INTEREST.

*(From the Chronicle)*

We give elsewhere an account of the proceedings of a meeting of the East Suffolk Agricultural Society. It is lamentable to perceive that the delusions, under which a large portion of the friends of the agricultural interest labour, with respect to any permanent benefits to be derived from a depreciation of the currency, exercised its full and potent sway over the majority of this assembly. It will be seen that, in spite of the sound arguments of the more reasonable portion of the speakers, the currency doctors succeeded in so mystifying or misleading the judgments of their auditors, as to induce a majority of the meeting to concur in resolutions connecting the relief of agricultural distress with what is quaintly called an expansion of the currency, (clipping down the sovereign, and making four sovereigns into six, is certainly one way of expanding the currency); but another fallacy not less to be deplored, though more readily to be accounted for, is the notion entertained by many of this class, and favoured occasionally by others who must know better, viz. that the distress of the agricultural interest can be removed by any Parliamentary enactments. We beg in perfect sincerity to ask the landlords and tenants of England, what they can possibly desire for agriculture, in the shape of legislative protection, more than they already have? Is not the commerce of the country hampered and the manufacturing interest already taxed for the benefit of land, by a system of duties on foreign corn, which amount virtually to prohibition? And are not foreign nations, who might carry on a trade most beneficially to all parties, are they not compelled to close their ports against British manufactures, and disabled from purchasing from us, because we refuse to take the only commodities they have to offer in return? Can they desire more than a perfect monopoly of the home market? But again, can it be reasonably argued that the local taxes affecting the landed interest are sufficient to be considered as a cause of agricultural distress? Yet what beyond trifling modifications, or alterations of this kind, can Parliament possibly do, even though it be entirely devoted to the particular interests of this important section of the community? It seems unfortunately to be taken for granted, in meetings of this description, that agricultural prosperity can be induced by some miraculous interference of the legislature. That the landlord must receive a full rent, and the farmer a full compensation for his time and capital, or else the legislature is to blame, and the whole country must be appealed to, to give instant relief. But why should this be looked for in agri-

cultural more than in any other investments of capital? Might not the merchant as well expect to have the losses of trade made up by a Parliamentary grant, and argue that the capital invested in merchandize to Rio or Leipsic ought to bring him in certain returns, and to enable him to maintain a certain station, and to live at a certain scale of expense? Where is the class or section of the community that would not allege claims to Parliamentary interference, if such a line of argument as this were to be considered valid and legitimate? The agriculturalists would do well to consider seriously, first, whether the grievances under which they suffer are at all dependent upon acts of the legislature; and secondly, whether it be possible by any alterations which Parliament can enact, to make any permanent amelioration in their present condition. We suspect that the only legitimate remedy is to be found in a systematic reduction of expenses and charges of every kind, of which the demands of the tax-gatherer form but a very small and inconsiderable part.

### STATE OF THE AGRICULTURISTS.

*(From the Morning Post.)*

The agricultural classes of the community are sustaining, and have long sustained, very grievous injury from a progressive reduction in the prices of the various productions of the soil, unaccompanied by that mitigation of the burdens which are imposed on them by the State which they believe might have been afforded during a period in which the State has been enabled to remit taxes to a considerable amount, and has, in fact, remitted them, but in such a manner as to confer by far the greater share of advantage upon other classes already in a state of comparative prosperity.

In the general proposition, that, with a surplus of revenue at its disposal sufficient to warrant a considerable, a rapid reduction of taxes, the Government might have done more than it has, in fact, accomplished, for the relief and support of the suffering owners and occupiers of land, the agricultural interest unanimously concur. Some differences have, however, existed among them as to the mode in which this support and relief might have been most advantageously administered. They are, from their position, and the nature of their vocations, deprived, in a considerable degree, of those opportunities of discussion and of concert which enable the manufacturing and commercial classes to agree in the pursuit of a definite and common object, and of commanding the attention of the Government and Legislature to their united voice. Hence, as the agriculturists have at length discovered, they have failed to obtain justice from a Government and Legislature solicitous chiefly of *clat* and popularity, and deeming all the purposes of good Government sufficiently attained if they can so manage the affairs of the nation as to secure to themselves the noisy applause of the multitude which occasionally assemble in our manufacturing and commercial towns.

It was incidental to the situation of the agricultural position of the population that the suggestions of individuals of their body should be too easily taken for an expression of their unanimous or general opinion, and that any error into which particular persons were betrayed should be imputed to the whole class by politicians little anxious for their welfare, and abundantly solicitous for the favour and applause of the condensed masses of people, who ignorantly imagined that they had interests adverse to those of the landlord and the farmer. From misconceptions or misrepresentations of this class, it is

plain that the agricultural classes have sustained very material injury.

Against such injury we rejoice to find that the landed interest have adopted the most efficacious means to protect themselves for the future, by the establishment of a point of re-union, a centre of communication, in London, under the name of "The Royal Agricultural Society of Great Britain and Ireland." The first steps towards the establishment of this most valuable and necessary association were taken at the meeting held at Aylesbury no longer ago than the 12th instant, under the presidency of that zealous and enlightened friend of the agriculture of Great Britain, the Marquess of Chandos, and a detailed plan of the nascent society is now before us. We have no doubt that it will greatly contribute to the future protection and welfare of the important classes for whose advantage it is instituted; for it will supply those desiderata the want of which has hitherto kept the political influence of the landed interest of the country so far below the level of its real power and importance—the means of an easy interchange of thought, and an efficient concentration of strength.

It will, we apprehend, by the aid of this useful institution, be very speedily discovered that the landed interest, as a body, not think it could conduce to their advantage to disturb afresh all the contracts and all the relations of society, by any kind of tampering with the currency. It will be very speedily discovered that the landed interest, as a body, do not desire that any tax should be abolished for their benefit which the revenue cannot spare, consistently with the preservation of public faith and the effective maintenance of every necessary or useful establishment, or for which an adequate and preferable substitute cannot be found. But it will also, we hope and believe, be speedily discovered, that the fair claims of the landed interest to such relief as their condition demands, and as the State can afford, may no longer be safely withheld by any body of Ministers, however desirous they may be to gratify and flatter the pot-house politicians of large towns, and to attract to themselves the vociferous acclamations of assembled multitudes.

We congratulate the landed interest most sincerely on the measure they have adopted, and confidently anticipate that it will be productive of the most important and beneficial results.

It is impossible for us to dismiss this subject without adverting to the train of observations which the present movement of the landed interest has elicited from some of our contemporaries. One of them, in particular, who has lately hoisted Conservatory colours, and (as if in mourning for his own metamorphosis) has only hoisted them half masthigh, avails himself of the occasion to bring a railing accusation against both landlords and tenants, to tell them that they have no claim to pity or relief, inasmuch as they are themselves the authors of whatever losses or sufferings they have endured, and to insult them by admonishing the landlords to lower their rents, and the farmers to become holders of the plough, and make their wives and daughters betake themselves to the poultry-yard and the dairy. It would, we feel, be doing too much honour to this silly and malignant trash to bestow upon it any lengthened notice. The writer cannot but know that rent is not an arbitrary impost, dependent upon the mere will of the landlord, but as much a matter of fair, equal, and independent contract between two parties, as the bargain made by a newspaper proprietor when he orders a fount of type, or takes a new reporter into his employ. And why should

farmers more than any other men be admonished as to the manner in which they ought to conduct their own business? Why, especially, should instruction upon this subject be obtruded upon them by persons who evidently know nothing of the subject of which they presume to treat? The shallowest person in the world must at once perceive that the occupier of a farm of any considerable extent could not more ruinously misemploy his time than by devoting it to the manual operations of agriculture. The most prejudiced man in the universe must admit that agriculture is reduced to a deplorable state, from which, if possible, it ought to be redeemed, when the occupier of an extensive farm—of necessity a considerable capitalist—a man daily engaged in large and important transactions, and employing in a wide sphere of action the qualities of skill, diligence, sagacity, and enterprise, cannot, without imprudence, exempt his wife and daughters from the druggery of milking his cows and feeding his pigs. All grocers do not make their wives and daughters weigh sugar and figs; nor do linendrapers, haberdashers, and hosiers, generally require the females of their family to measure Irish, or adjust for their customers the paraphernalia of stockings, garters, and shoestrings; nor do attorneys teach them to engross; nor do the proprietors of newspapers employ them in revising slips or cutting down the penny-a-liners. Why, then, in the name of common sense, should it be pretended, unless it be merely to gratify and flatter the cockney frequenters of the tap-room, that a ruined farmer is unworthy of commiseration if his wife and daughters have perchance been indulged in any more elegant recreation or refined employment than the poultry-yard and the dairy can afford!

## AGRICULTURAL DISTRESS.

TO THE EDITOR OF THE SPECTATOR.

Sir—Your report in the last week's *Spectator* of the speech of the Earl of Darlington, at Bridgnorth, encourages me to lay before the public a plan of certain relief to the agriculturist. Since the prices of their produce have gone back to those of 1790, it is but justice the rents should go back to what they then were. The Tithes should in like manner be reduced; and those who have patronage in the Church should sign a declaration that they would only bestow such patronage on those from whom they expected a just consideration for the farmers, and make the rent a standard for tithes. I calculate that in those parishes now paying twenty shillings an acre rent, the tithe will average four shillings; so that if such rents are reduced to fifteen shillings an acre rent, the farmer should have also a reduction of one shilling an acre on the tithe; and thus the owners of the land and the tithe join hand and heart in the relief of agriculture. Another relief would arise from an Association or Joint-Stock Company for the purchase of tithes now in the hands of lay proprietors. Let such Association now receive three per cent. yearly on each hundred pound share; and as they can afford it reduce such purchased tithes to the level of the adjoining parishes. No wrong will be done to any one proprietor, but ultimately a great good, not only to the agriculturist, but to the whole community,

Nov. 5, 1835.

AN ENGLISHMAN.

## TURF INTELLIGENCE.

Training is indispensable to the racer, as well as to the pugilist; producing in each case strength, wind, and vigour. The muscle of each when properly trained, will be found repulsive to the touch, or, in other words, very hard, and very elastic. In consequence of such an improved state of the animal system, the muscle of the pugilist repels as it were the blows of his antagonist, and they consequently make much less impression than if inflicted under other circumstances, that is, where the flesh is soft or flabby. Hence may be easily perceived the advantage resulting to the racer from the strength and extreme springiness of his tendon and muscle.

In training the racer, the first object of consideration should be the constitution of the individual: there are greedy feeders, good feeders, and delicate or shy feeders. The first class will require more exercise than usual, and perhaps more physic and bleeding also; for the second, the administrations just mentioned should be more moderate; the third class, however, are the most troublesome to manage: it is difficult to bring a horse into condition that will not eat: delicate feeders may be recognised not only by their thin carcase or meagre appearance, but frequently by a peculiar expression of the eye, understood by those who have thoroughly studied the subject, but which would be difficult to image to the mind of the reader by the beautiful science of writing.—Mr. Thompson's Orthodox presents the indications of a delicate feeder, (the peculiar expression of the eye, amongst the rest) in a very remarkable manner.

There are few better tests of genuine blood than training; none but a thorough-bred horse can eat the quantity of corn, or endure the severe exercise, deemed requisite for the racer. It may very easily be perceived, that, where an animal is supplied in reckless profusion, with the most nutritious food, that his system must be on the verge of disease; to counteract which in the racer, not only exercise and sweats, but physic and bleeding also, become necessary; by which means, in due process, the tendon becomes very full and very hard, the muscle large and firm—indeed the muscle can never be rendered too large, so long as it is divested of fat; but if a particle of fat remain, the horse's condition is not perfect. We have frequently heard trainers remark that such a horse has too much flesh upon him to run, or that he would run better with less flesh. The fact is, no horse can have too much flesh (which constitutes muscle) if it be completely divested of fat, as we have just before observed. It will be eagerly remarked by way of replication, that some horses will carry more flesh than others; which is very true, but the circumstance does not disturb our position in the most trifling degree. We are scarcely aware of an art or science; which will not admit of systematic arrangement—indeed no human operations can proceed properly unless upon systematic principles, we will therefore adopt this very eligible mode in the observations we purpose to make on Training. In regard to one horse carrying more flesh than another, this may vary according to the constitution of the animal, but the principle is, that, where the bone is large, the tendon will be found in proportion; and consequently, inasmuch as these

constitute the base upon which the muscle must be raised, where the bone and tendon are large, much muscle may be laid upon them by training. It has not unfrequently fallen to our lot to listen to observations in which small bone and large tendon have been considered as the acmè of perfection; that, as the bone was small the animal would be less encumbered with its weight; and that, on account of its inelasticity, it contributed nothing to power and speed. Such a theory, considered in its true light, as a mere flight of ignorant fancy, may be all very well in its way—ridiculous enough; since it is in direct opposition to the laws of nature. A very trifling knowledge of anatomy will enable us to perceive that as the tendon is fastened to, and supported by, the bone, the one must be in proportion to the other: trifling differences or variations may be found, but no case can be produced where *very large tendon* is found adhering to *very small bone*. If such an instance could be brought forward, it would be found a malformation of the parts, and instead of increasing the strength and speed of the animal, could scarcely fail to operate in the inverse ratio.

On going over his Majesty's stud at Hampton Court, some weeks ago, the Colonel (amongst many other nags) fell under our observation. This beautiful horse finished his racing career some years ago; but his condition, nevertheless, was admirable: on passing our hand down his foreleg from the knee to the pastern, we found the tendon uncommonly well developed, very firm, and very elastic. The tendons of the two Arabians (lately arrived from the Nabob of Oude) were soft and receded from the touch, owing to their lack of condition; these horses, be it remembered, had just been landed from a four months' voyage, some hundreds of miles over a stormy sea, of the injurious effects of which they bore incontestible indications. The Colonel and these Arabians presented the opposites, of *Condition* and *no Condition*. Yet the condition of the former was not exactly that of the racer. The Colonel's exercise consists of longeing two hours each day.

The most perfect condition which ever fell under our observation was the instance of the Marquis of Sligo's Economist, when, four years ago, he ran at Liverpool. We never recollect placing our hands upon a crest which answered the touch so well. This horse had been trained by Mr. Pierse of Richmond.

Amongst the generality of those persons who follow the occupation of Trainers, the process is regular, if not *mechanical*, and consequently those constitutional differences or variations which cannot fail to exist, are not sufficiently taken into consideration; or, we may say, not sufficiently understood. What may be called the dictates of nature are, therefore, not unfrequently, disregarded; and if in preparing horses for the course, natural or physiological causes are not duly considered, they can never acquire the requisite condition to enable them to put forth the utmost of their powers. Hence it may be perceived, that, although the business of training may be systematised and consequently simplified, yet, it should be always subject to those practical variations, which difference of constitution imperiously demands.

The system generally adopted by professed trainers, is to commence operations at four o'clock in the

morning, by brushing the horse over: this being done, and the horse having finished his corn, he is taken out to exercise; which should be regulated according to his age, the state of his flesh, &c. At the close of his exercise, he is watered, and takes a canter. When he returns to the stable, wipping, leg-rubbing, brushing &c., ensues; afterwards feeding; when the door is closed, and the animal left to himself, free from all kind of disturbance. All this is finished as early in the day as possible. A similar ceremony, but of short duration, takes place about three hours afterwards: when the stable door is again closed for several hours; and the horse is then subjected to exercise, or rather perhaps to airing, and is watered, &c. as in the morning. At eight o'clock, he is fed and racked up for the night.

The administration of physic ought, like exercise, to be regulated by circumstances, such as the state of the horse, the quality of his constitution, &c.

That horses are frequently over-trained, we have not the least doubt, and that many horses are thus prematurely destroyed, we feel equally confident. What but an excess of training caused that splendid horse Priam, to leave the course at so early a period? Speaking generally, the excessive sweats to which racers are subjected, are highly injurious; the animal economy of the horse is unable to answer such improvident demands without suffering deterioration. In fact, this inordinate expression of the animal juices, prevents the acquisition of that firm fulness of tendon and muscle indispensable to the perfection of condition.

The ground upon which the racer is trained merits consideration. Very hard and very wet grounds are highly objectionable. The best ground for the purpose is that which is clothed with absorbent elastic turf, generally found on the borders of moors; and if it contain some gentle undulation it is to be preferred.

As to public or professional training establishments they may be convenient enough under some circumstances; but there is nothing so very occult or mysterious in the business of training as to render it unattainable by ordinary capacity, or prevent those who keep racers from having them trained under their own immediate inspection: we have known several trainers who occasionally practiced legerdemain, but were no conjurors after all: we could designate some half score of this sort, only that such an enviable pre-eminence might perhaps appear invidious. It generally happens that trainers receive the stakes won by the horses under their care; and it is no uncommon circumstance for clerks of the races to have to transmit sums of money to distant parts, owing to those sums not having been deposited in their hands in due time. On one occasion, a friend of our's had to transmit twenty-five pounds, under such circumstances, to a little cunning trainer, still on the Turf. For which purpose he was about to enclose a twenty pound note and a five pound note: he was in the act of enclosing them in the requisite letter, when, recollecting some suspicious circumstances in the conduct of the wily agent to whom they were to be addressed, he called in the assistance of two disinterested friends, who made the usual memorandums, inclosed the note, sealed the letter, and dropped it into the post-office. The precaution proved essentially necessary. The receipt of the letter was acknowledged, as well as the receipt of five pounds, but the larger note (the twenty) was positively and impudently denied. The person who had transmitted the money, aware of his invulnerable position, paid no attention to the business till it had assumed a formal appearance; the owner of the horse to whom the 25 pounds were due, accompanied by the trainer,

visited the clerk of the races, and demanded twenty pounds; the honest trainer offering to confirm his doubted veracity by an oath in the presence of a magistrate: when at length the two respectable persons who had witnessed the transaction in the manner already described, were brought forward: the truth immediately flashed across the mind of the owner of the horse: the trainer, who up to this moment, had supported his falsehood with unparalleled effrontery, became abashed and was covered with confusion.

Yet we have not found the disease of dishonesty and fraudulent dealing, absolutely epidemical amongst trainers; as we could name a score, whose conduct we have had many opportunities of observing, and whom we believe to be very upright honest men.

What are called public training stables must have the effect of reducing the number of horses which would otherwise be brought to the post for the great stakes, as was rendered manifest by the slender field which appeared for the late Doncaster St. Leger; the powers of the various competitors in the same stable having been previously ascertained, the owners of such as are considered to have no chance, choose rather to lose the half forfeits than risk the whole sum upon an animal of whose quality no doubt can be entertained. Moreover, the system offers greater temptation for trainers and jockeys to bet, and enables them, with more facility, to bet foully:—a betting trainer and a betting jockey cannot be otherwise than objects of suspicion. On every view of the case, public training stables offer a temptation to swindling and robbery; which, it is well known, have proved irresistible in many instances. And that racers can be as well trained as possible in the master's own stable or privately, we need no better proof than that afforded by the horses of Mr. Mostyn, under the management of that civil upright man of good plain sense, John Blenkhorn.

The Marquis of Westminster, by way of giving a fillip to the refrigerated state of Turf affairs, has boldly challenged the world, his colt, Touchstone, carrying 8st. 10lbs., against any competitor, without exception. This would appear noble daring; since the challenge is thrown in the teeth of several superior nags, namely, Plenipo, Glencoe, and Rockingham: Queen of Trumps is out of the question, she could not afford to give a year against such a racer as Touchstone. With Plenipo, Touchstone could have no chance; and the Marquis must have been aware, before he issued his challenge, that he would not come against him. We think Glencoe superior to Touchstone; and we are further of opinion that Rockingham would beat him. Touchstone has been beaten by General Chasse, and the former has successfully opposed the General. Touchstone, out of Scott's stable, proved himself superior to General Chasse; but when brought forward by his owner (the Marquis of Westminster) was unsuccessful against the same horse. The enigma is susceptible of satisfactory explanation. Touchstone is a greedy feeder, and therefore requires more than ordinary exercise, in order to attain that perfection of condition so essential to the racer. The private training ground of the Noble Marquis is not clothed with that soft elastic turf so grateful to the feet of the horse; and, as some suspicions were entertained of Touchstone's fore legs, it was thought very hazardous to give him the requisite exercise upon hard ground. The training ground used by Scott is of a different quality; upon it Touchstone can receive his gallop without risk to his legs: and hence may be perceived the reason of his success and discomfiture when opposed to the same horse.
